

Latest C_BW4H_2505 Test Practice | C_BW4H_2505 Download Pdf

CS504 — Lecture 23: Activity Diagrams

MCQ 1

An activity diagram is mainly used to represent.

- a) Class relationships
- b) Object structure
- c) Workflow of activities ✓
- d) Database schema

Explanation:

Activity diagrams model the flow of activities or actions in a system from start to end.

MCQ 2

Passing the exam just one time is a good wish of every candidate. If you choose us, we can help you pass your exam in your first attempt. C_BW4H_2505 exam braindumps are high quality, and you can improve your efficiency during the preparation. Furthermore, C_BW4H_2505 exam dumps are cover most of the knowledge points for the exam, you can have a good command of the knowledge points during practicing. We have online and offline service for C_BW4H_2505 Exam Materials, if you any questions bother you, you can just have a conversation with us or you can clarify the problem through email, and we will give you reply as quickly as we can.

To maintain relevancy and top standard of SAP C_BW4H_2505 exam questions, the TroytecDumps has hired a team of experienced and qualified SAP C_BW4H_2505 exam trainers. They work together and check every C_BW4H_2505 exam practice test question thoroughly and ensure the top standard of C_BW4H_2505 Exam Questions all the time. So you do not need to worry about the relevancy and top standard of SAP C_BW4H_2505 exam practice test questions.

TroytecDumps SAP C_BW4H_2505 Exam Questions in PDF Format

If you have the C_BW4H_2505 certification, it will be very easy for you to achieve your dream. But it is not an easy thing for many candidates to pass the C_BW4H_2505 exam. By chance, our company can help you solve the problem and get your certification, because our company has compiled the C_BW4H_2505 question torrent that not only have high quality but also have high pass

rate. We believe that our C_BW4H_2505 exam questions will help you get the certification in the shortest. So hurry to buy our C_BW4H_2505 exam torrent, you will like our products.

SAP C_BW4H_2505 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • SAP BW • 4HANA Data Flow: This section of the exam measures the practical ability of SAP Consultants to load data within the SAP BW • 4HANA environment. It assesses familiarity with data movement and transformation processes across different layers of the system.
Topic 2	<ul style="list-style-type: none"> • Fundamentals: This section of the exam measures the foundational understanding of SAP Consultants and covers essential terms and concepts related to SAP BW • 4HANA and SAP Business Data Cloud. It focuses on the core framework and architecture necessary to navigate and work with these platforms.
Topic 3	<ul style="list-style-type: none"> • Data Acquisition into SAP HANA: This section evaluates the capacity of SAP Consultants to integrate various data sources into SAP HANA. It assesses their ability to understand different ingestion techniques and ensure data accessibility for processing.
Topic 4	<ul style="list-style-type: none"> • SAP BW Query Design: This section of the exam assesses the ability of Data Engineers to create and run queries using SAP BW • 4HANA. It evaluates how well candidates can work with query components to retrieve and structure data effectively for reporting and analysis.
Topic 5	<ul style="list-style-type: none"> • Native SAP HANA Modeling: This section evaluates the ability of SAP Consultants to describe and apply native modeling options in SAP HANA. It emphasizes understanding how to build optimized data structures directly within the HANA platform.

SAP Certified Associate - Data Engineer - SAP BW/4HANA Sample Questions (Q63-Q68):

NEW QUESTION # 63

What are some of the prerequisites for using SAP S/4HANA ABAP CDS views for extraction into SAP BW/4HANA in an ODP context? Note: There are 2 correct answers to this question.

- A. The ABAP CDS views must be defined with the appropriate data extraction annotations.
- B. An ODP source system with context ODP_CDS must be created in SAP BW/4HANA.
- C. The Operational Data Provisioning Framework must be configured in SAP BW/4HANA.
- D. The ABAP CDS views must be released through the program RODPS_OS_EXPOSE for BW extraction.

Answer: B,D

Explanation:

Extracting data from SAP S/4HANA ABAP CDS (Core Data Services) views into SAP BW/4HANA using the Operational Data Provisioning (ODP) framework requires specific prerequisites. These ensure that the CDS views are properly exposed and accessible for extraction. Below is a detailed explanation of why the verified answers are correct.

* ABAP CDS Views: ABAP CDS views are reusable data models defined in SAP S/4HANA. They provide a semantic layer for querying data and can be used for reporting and analytics.

* Operational Data Provisioning (ODP): ODP is a framework in SAP BW/4HANA that enables real-time or near-real-time data extraction from various source systems, including SAP S/4HANA.

* ODP Contexts: ODP contexts define the type of source system and data extraction method. For CDS views, the context ODP_CDS is used.

* Data Extraction Annotations: Annotations in CDS views specify metadata for extraction purposes, such as field properties and extraction behavior.

Key Concepts:

* Option A: The ABAP CDS views must be released through the program RODPS_OS_EXPOSE for BW extraction.

- * Why Correct? To make an ABAP CDS view available for extraction via ODP, it must be explicitly released using the program RODPS_OS_EXPOSE. This step registers the view in the ODP framework and makes it accessible to SAP BW/4HANA.
- * Option B: The Operational Data Provisioning Framework must be configured in SAP BW/4HANA.
- * Why Incorrect? While configuring the ODP framework is a general prerequisite for any ODP-based extraction, it is not specific to extracting ABAP CDS views. This option is too broad to be considered a direct prerequisite.
- * Option C: An ODP source system with context ODP_CDS must be created in SAP BW/4HANA.
- * Why Correct? To extract data from ABAP CDS views, you must create an ODP source system in SAP BW/4HANA with the context ODP_CDS. This context specifies that the source system provides data from CDS views.
- * Option D: The ABAP CDS views must be defined with the appropriate data extraction annotations.
- * Why Incorrect? While annotations are important for defining metadata in CDS views, they are not mandatory for ODP-based extraction. The primary requirement is releasing the view using RODPS_OS_EXPOSE.

Verified Answer Explanation:

- * SAP BW/4HANA Extraction Guide: The guide outlines the steps for extracting data from ABAP CDS views using the ODP framework, including the use of RODPS_OS_EXPOSE and the creation of an ODP source system.
- * SAP Note 2700850: This note provides detailed instructions on releasing CDS views for BW extraction and configuring the ODP framework.
- * SAP Best Practices for ODP Extraction: SAP recommends using the ODP_CDS context for extracting data from ABAP CDS views and emphasizes the importance of releasing views using RODPS_OS_EXPOSE.

SAP Documentation and References:

NEW QUESTION # 64

What are the reasons for implementing Composite Providers? Note: There are 2 correct answers to this question.

- A. To provide an interface for using BW queries
- B. To persist combined data for reporting
- C. To directly expose an SAP HANA table from an external schema
- D. To provide a virtual data mart layer that combines existing BW models

Answer: B,D

Explanation:

Composite Providers in SAP BW/4HANA (part of the SAP Data Engineer - Data Fabric landscape) are essential components used to combine data from multiple sources into a unified view for reporting and analytics. They serve as a flexible tool for creating complex data models by integrating various BW objects, such as InfoProviders, Open ODS views, and external sources. Below is a detailed explanation of why Composite Providers are implemented:

* Explanation: Composite Providers can be configured to persist data by materializing the combined data into a physical table. This is particularly useful when you need to store intermediate results or optimize query performance for frequently accessed reports. Persisting data ensures faster access times and reduces the load on underlying systems.

* In SAP BW/4HANA, Composite Providers allow users to define whether the data should be persisted or remain virtual. This flexibility supports both real-time reporting and optimized batch processing scenarios.

Option B: To directly expose an SAP HANA table from an external schema
 Explanation: This option is incorrect because Composite Providers are not designed to directly expose SAP HANA tables from external schemas. Instead, they focus on combining data from BW objects or other sources within the BW/4HANA environment. If you need to expose an external HANA table, you would typically use Open ODS views or other integration mechanisms.

Reference: SAP documentation emphasizes that Composite Providers are primarily used for combining BW models rather than exposing external HANA tables.

Option C: To provide an interface for using BW queries
 Explanation: This option is incorrect because Composite Providers themselves do not directly provide an interface for BW queries. Instead, BW queries are built on top of InfoProviders, including Composite Providers. The role of a Composite Provider is to combine data, while BW queries are used to define the analytical logic and presentation layer.

Reference: According to SAP Data Engineer - Data Fabric guidelines, BW queries are created separately and consume the data exposed by Composite Providers or other InfoProviders.

Option D: To provide a virtual data mart layer that combines existing BW models
 Explanation: One of the primary purposes of Composite Providers is to create a virtual data mart layer. This allows users to combine existing BW models (e.g., InfoCubes, DataStore Objects, Open ODS views) without physically moving or duplicating data. By leveraging virtualization, Composite Providers enable real-time access to data while maintaining flexibility and reducing redundancy.

Reference: SAP BW/4HANA promotes the use of Composite Providers as part of its virtual data modeling capabilities, aligning with the principles of SAP Data Fabric to integrate and harmonize data across diverse sources.

U

NEW QUESTION # 65

Which data deletion options are offered for a Standard DataStore Object (advanced)? Note: There are 3 correct answers to this question.

- A. Selective deletion of data
- B. Deletion of data from all tables
- C. Request-based data deletion
- D. Selective deletion including data of subsequent targets
- E. Deletion of all data from active table only

Answer: A,B,E

NEW QUESTION # 66

Which recommendations should you follow to optimize BW query performance? Note: There are 3 correct answers to this question.

- A. Create linked components.
- B. Include fewer drill-down characteristics in the initial view.
- C. Use the include mode within filter restrictions.
- D. Use the dereference option for reusable filters.
- E. Use mandatory characteristic value variables.

Answer: B,C,E

NEW QUESTION # 67

What are prerequisites for S-API Extractors to load data directly into SAP Datasphere core tenant using delta mode? Note: There are 2 correct answers to this question.

- A. Real-time access needs to be enabled
- B. Extractor must be based on a function module
- C. Operational Data Provisioning (ODP) must be enabled
- D. A primary key needs to exist.

Answer: C,D

Explanation:

To load data directly into SAP Datasphere (formerly known as SAP Data Warehouse Cloud) core tenant using delta mode via S-API Extractors, certain prerequisites must be met. Let's evaluate each option:

* Option A: Real-time access needs to be enabled. Real-time access is not a prerequisite for delta mode loading. Delta mode focuses on incremental data extraction and loading, which does not necessarily require real-time capabilities. Real-time access is more relevant for scenarios where immediate data availability is critical.

* Option B: A primary key needs to exist. A primary key is essential for delta mode loading because it uniquely identifies records in the source system. Without a primary key, the system cannot determine which records have changed or been added since the last extraction, making delta processing impossible.

* Option C: Extractor must be based on a function module. While many S-API Extractors are based on function modules, this is not a strict requirement for delta mode loading. Extractors can also be based on other mechanisms, such as views or tables, as long as they support delta extraction.

* Option D: Operational Data Provisioning (ODP) must be enabled. ODP is a critical prerequisite for delta mode loading. It provides the infrastructure for managing and extracting data incrementally from SAP source systems. Without ODP, the system cannot track changes or deltas effectively, making delta mode loading infeasible.

References: SAP Datasphere Documentation: Outlines the prerequisites for integrating data from SAP source systems using delta mode.

SAP Help Portal: Provides detailed information on S-API Extractors and their requirements for delta processing.

SAP Best Practices for Data Integration: Highlights the importance of primary keys and ODP in enabling efficient delta extraction.

In conclusion, the two prerequisites for S-API Extractors to load data into SAP Datasphere core tenant using delta mode are the existence of a primary key and the enabling of Operational Data Provisioning (ODP).

NEW QUESTION # 68

.....

Three versions for C_BW4H_2505 exam materials are available, and you can choose the most suitable one according to your own needs. C_BW4H_2505 PDF version is printable, and if you like the hard one, you can print them into paper. C_BW4H_2505 Soft test engine supports MS operating system, and it can install in more than 200 computers, and it can also simulate the real exam environment, so that you know the procedures for the exam. C_BW4H_2505 Online soft test engine is convenient and easy to learn, and it has testing history and performance review, and you can have a review what you have learnt.
