MAC 2601 EXAM PACK LATEST 2024-2025  
QUESTIONS AND CORRECT ANSWERS  
GRADED A+

internal audit - ANSWER-independent, objective assurance and consulting activity designed to add value and improve an organization's operations. independence and objectivity, systematic and disciplined approach

governance - ANSWER-the process conducted by the BOD to authorize, direct, and oversee management toward the achievement of the organization's objectives.It is the system of rules, practices, and processes by which a company is directed and controlled.

risk management - ANSWER-the process conducted by management to understand and deal with uncertainties that could affect the organization's ability to achieve its objectives

Our company has taken a lot of measures to ensure the quality of our C\_DBADM\_2601 preparation materials. It is really difficult for us to hire a professional team, regularly investigate market conditions, and constantly update our C\_DBADM\_2601 exam questions. But we persisted for so many years. And our quality of our C\_DBADM\_2601 study braindumps are praised by all of our worthy customers. And you can always get the most updated and latest C\_DBADM\_2601 training guide if you buy them.

As far as the price of SAP C\_DBADM\_2601 exam practice test questions is concerned, these exam practice test questions are being offered at a discounted price. Get benefits from SAP C\_DBADM\_2601 exam questions at discounted prices and download them quickly. Best of luck in C\_DBADM\_2601 Exam and career!!! Just choose the best C\_DBADM\_2601 exam questions format and start SAP C\_DBADM\_2601 exam preparation without wasting further time.

## C\_DBADM\_2601 Latest Test Simulator | C\_DBADM\_2601 Test Pdf

To suit customers' needs of the C\_DBADM\_2601 preparation quiz, we make our C\_DBADM\_2601 exam materials with customer-oriented tenets. Famous brand in the market with combination of considerate services and high quality and high efficiency C\_DBADM\_2601 study questions. Without poor after-sales services or long waiting for arrival of products, they can be obtained within 5 minutes with well-built after-sales services.

# SAP Certified - Database Administrator - SAP HANA Sample Questions (Q181-Q186):

## NEW QUESTION # 181

### CHALLENGE 4 - Rollout Recovery Validation Gate

Backups completed for the upgraded pilot system and the newly installed SAP HANA wave database before the rollout checkpoint. Recovery validation for the wave database is scheduled but not complete, and the pilot system has only backup completion evidence. What should happen before wave release approval?

- A. Approve the wave because completed backups are enough for rollout continuity.
- B. Replace recovery validation with dashboard availability because this is a rollout checkpoint.
- C. Release the wave and perform recovery validation only if reporting becomes unavailable.
- **D. Complete recovery validation and document startup behavior for the rollout systems.**

**Answer: D**

Explanation:

Feedback:

Recovery validation and startup behavior should be completed before wave release approval. Backup completion supports continuity planning, but it does not prove recoverability for the rollout systems.

## NEW QUESTION # 182

### CHALLENGE 1 - Post-Upgrade Configuration Consistency Review

During hypercare, the upgraded on-premises SAP HANA database remains available, but a retained configuration value from upgrade preparation differs from the newer administration template used in the SAP HANA Cloud test database. Reporting response time is acceptable during the day but varies during shift handover. What should the administrator do first?

- **A. Document the retained configuration value and separate it from performance observations before deciding on adjustment.**
- B. Ignore the retained value because database availability confirms that the upgrade state is acceptable.
- C. Change the on-premises configuration immediately to match the cloud template before reviewing reporting behavior.
- D. Tune the reporting workload first so that the configuration difference becomes less visible during handover.

**Answer: A**

Explanation:

Feedback:

The retained value should be documented and separated from performance observations before any adjustment decision. This preserves hypercare evidence and prevents the team from treating configuration state and performance behavior as the same validation result.

## NEW QUESTION # 183

A regional agricultural cooperative is rehearsing migration from SAP HANA on-premises to SAP HANA Cloud. The source export finishes, and the cloud target is reachable. During validation, the administrator sees that the imported dataset can be queried, but the migration record does not include confirmation that the cloud-side monitoring view has been added to the operations checklist. The project coordinator wants to approve the rehearsal because the data query succeeded.

The constraint is that the administrator must support phased modernization while ensuring the migrated target can be monitored after cutover. Approval must not rely only on data access from the cloud database.

What should the administrator recommend?

- A. Defer monitoring checklist updates until after production cutover so the migration schedule is not delayed.
- B. Repeat the source export because missing monitoring evidence means the data movement probably failed.
- C. Approve the rehearsal because successful target queries prove that the SAP HANA Cloud migration is ready.
- **D. Add and verify cloud-side monitoring evidence in the operations checklist, then approve the rehearsal only after target monitoring is confirmed.**

**Answer: D**

Explanation:

Feedback:

This resolves the post-migration operations gap at the target validation layer. Adding and verifying cloud-side monitoring evidence confirms that transfer, target query access, monitoring readiness, and approval evidence are aligned.

#### NEW QUESTION # 184

A retail planning team is preparing to shift one reporting workload from an on-premises SAP HANA database to SAP HANA Cloud, while keeping transactional processing on-premises for the current phase. The technical migration path is considered feasible, but the administration team is concerned that daily operational checks, backup assumptions, and monitoring responsibilities may be split incorrectly across the two environments if the transition is rushed.

Management wants a first step that supports phased modernization without forcing an immediate redesign of the full landscape. The decision must reduce transition risk and preserve clear operational ownership across the mixed environment.

Which approach is best for this phase?

- A. Move the reporting workload now, but continue using the same undifferentiated operational runbook for both environments until stabilization is complete.
- B. Delay the reporting move until both transactional and reporting workloads can be migrated together in one cutover.
- C. Keep all workloads on-premises and focus only on increasing monitoring frequency to reduce modernization risk.
- **D. Move the reporting workload in phases and define environment-specific operational checks and responsibilities before productive use in the target landscape.**

**Answer: D**

Explanation:

Feedback:

This drill addresses modernization pressure. A phased move is allowed by the mixed deployment model, but the real risk is operational ambiguity between on-premises and cloud responsibilities. The best answer supports incremental modernization while separating environment-specific checks, monitoring, and ownership before productive use. That reduces transition risk without demanding full redesign.

#### NEW QUESTION # 185

CHALLENGE 4 - Regional Release Recovery Assurance

The remediation lead can release the regional template on schedule using backup completion evidence, or delay briefly to include recovery validation for the remediation database and recoverability evidence for the upgraded system. Which path is most defensible?

- A. Release on schedule and attach recovery validation to the future SAP HANA Cloud migration plan.
- B. Release on schedule because meeting the template date is the strongest governance outcome.
- C. Cancel the regional release because recovery validation was not completed before testing began.
- **D. Delay briefly to complete recoverability evidence for systems supporting the regional release.**

**Answer: D**

Explanation:

Feedback:

A brief delay is most defensible because it completes recoverability evidence for systems supporting the regional release. This balances schedule governance with operational resilience evidence.

#### NEW QUESTION # 186

.....

Have tough-minded boy only, ability appeases billows, hoist the sails Yuan Hang. Our SAP C\_DBADM\_2601 exam dumps are the first step to bring you achievement. It provides you with pdf real questions and answers. By choosing it, you must put through SAP C\_DBADM\_2601 Certification that other people think it is very difficult. After you get the certification, you can lighten your heart and start a new journey.
