Palo Alto Networks XSIAM-Analyst Exam Syllabus Topics:

Topic	Details
Topic 1	• Incident Handling and Response: This section of the exam measures the skills of Incident Response Analysts and covers managing the complete lifecycle of incidents. It involves explaining the incident creation process, reviewing and investigating evidence through forensics and identity threat detection, analyzing and responding to security events, and applying automated responses. The section also focuses on interpreting incident context data, differentiating between alert grouping and data stitching, and hunting for potential IOCs.
Topic 2	• Alerting and Detection Processes: This section of the exam measures the skills of Security Analysts and focuses on recognizing and managing different types of analytic alerts in the Palo Alto Networks XSIAM platform. It includes alert prioritization, scoring, and incident domain handling. Candidates must demonstrate understanding of configuring custom prioritizations, identifying alert sources like correlations and XDR indicators, and taking corresponding actions to ensure accurate threat detection.

	• Endpoint Security Management: This section of the exam measures the skills of Endpoint Security Administrators and focuses on validating endpoint configurations and monitoring activities. It includes managing endpoint profiles and policies, verifying agent status, and responding to endpoint alerts through live terminals, isolation, malware scans, and file retrieval processes.

Palo Alto Networks XSIAM Analyst Sample Questions (Q51-Q56):

NEW QUESTION # 51
Based on the image below, which two determinations can be made from the causality chain? (Choose two.)

- A. The process cmd.exe is responsible for the entire chain of execution resulting in the alerts.
- B. Cortex XDR agent malware profile module applied is set to "Report" mode.
- C. Malware.pdf.exe is responsible for the entire chain of execution resulting in the alerts.
- D. Three alerts in total were generated by the agent on the endpoint.

Answer: A,B

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
* D (Correct):The process cmd.exe is marked as theCausality Group Owner (GCO)in the image, meaning it is the root process responsible for spawning or causing the rest of the chain, including the execution of Malware.pdf.exe.
* B (Correct):Thealert iconsshown next to Malware.pdf.exe are typical when the malware profile is set to "Report" mode, which allows detection and alerting on the behavior without actively blocking it (otherwise, the process would not execute fully, and you'd see prevention action).
* A (Incorrect):While Malware.pdf.exe is shown as responsible for generating the alerts, the entire chain starts from cmd.exe, not Malware.pdf.exe.
* C (Incorrect):The image shows two alert icons, not three, so this statement cannot be determined as true from the causality chain. "The GCO (Causality Group Owner) in the causality chain visual indicates the parent/root process. If a prevention profile is set to Report, the process is logged and not blocked."
