NEW QUESTION # 28

What are two advantages of using zero-trust tags? (Choose two.)

- A. Zero-trust tags can be used to allow or deny access to network resources
- B. Zero-trust tags can determine the security posture of an endpoint.
- C. Zero-trust tags can be used to allow secure web gateway (SWG) access
- D. Zero-trust tags can be used to create multiple endpoint profiles which can be applied to different endpoints

Answer: A,B

Explanation:

Zero-trust tags are critical in implementing zero-trust network access (ZTNA) policies. Here are the two key advantages of using zero-trust tags:

* Access Control (Allow or Deny):

* Zero-trust tags can be used to define policies that either allow or deny access to specific network resources based on the tag associated with the user or device.

* This granular control ensures that only authorized users or devices with the appropriate tags can access sensitive resources, thereby enhancing security.

* Determining Security Posture:

* Zero-trust tags can be utilized to assess and determine the security posture of an endpoint.

* Based on the assigned tags, FortiSASE can evaluate the device's compliance with security policies, such as antivirus status, patch levels, and configuration settings.

* Devices that do not meet the required security posture can be restricted from accessing the network or given limited access.
