Fortinet FCP - Azure Cloud Security 7.4 Administrator Sample Questions (Q33-Q38):

NEW QUESTION # 33

Refer to the exhibit.

Your company runs front-end web servers in Azure. You need to deploy a Linux VM to be used as a web server. To protect your web servers with a web application firewall (WAF), you deploy FortiWeb to secure applications from web-based attacks.

Which FortiWeb operation mode can you implement for this scenario?

- A. Passive monitoring
- B. Transparent inspection
- C. Reverse proxy
- D. True transparent proxy

Answer: C

Explanation:

The Reverse Proxy mode is the most appropriate FortiWeb operation mode for this scenario. In this mode, FortiWeb sits between internet users and the Linux web servers, terminating client connections and then forwarding requests to the backend servers. This enables deep inspection, protection from web attacks (like SQL injection and XSS), and full WAF functionality, making it ideal for securing front-end web servers exposed to the internet.

NEW QUESTION # 34

What characterizes the branch-to-branch topology in an Azure virtual WAN?

- A. Enhanced security through centralized traffic management
- B. Increased redundancy through multiple connections to the central hub
- C. Improved scalability for branch offices connecting to Azure
- D. Simplified network architecture with reduced hub dependencies

Answer: C

Explanation:

The branch-to-branch topology in Azure Virtual WAN is characterized by direct connectivity between branches through the Virtual WAN backbone, which reduces dependency on centralized hubs. This results in a simplified network architecture, lowering latency and optimizing routing between branch locations.

NEW QUESTION # 35

What are two characteristics of Azure standard public IP addresses? (Choose two.)

- A. They support the use of availability zones
- B. They require the configuration of NSGs for inbound traffic
- C. They can be used with load balancers of any SKU
- D. They can be dynamic or static

Answer: A,D

Explanation:

They support the use of availability zones - Standard public IP addresses are zone-redundant and support availability zone deployments for high availability.

They can be dynamic or static - Azure standard public IPs can be configured as static or dynamic, offering flexibility based on

deployment needs.

NEW QUESTION # 36

Your organization is planning to deploy FortiWeb in Azure to provide a web application security solution to its web servers. One of the requirements is to have granular control of the number of vCPUs and memory assigned to this resource. Which cloud model could meet this requirement?

- A. Infrastructure-as-a-Service (IaaS)
- B. Platform-as-a-Service (PaaS)
- C. Software-as-a-Service (SaaS)
- D. Function-as-a-Service (FaaS)

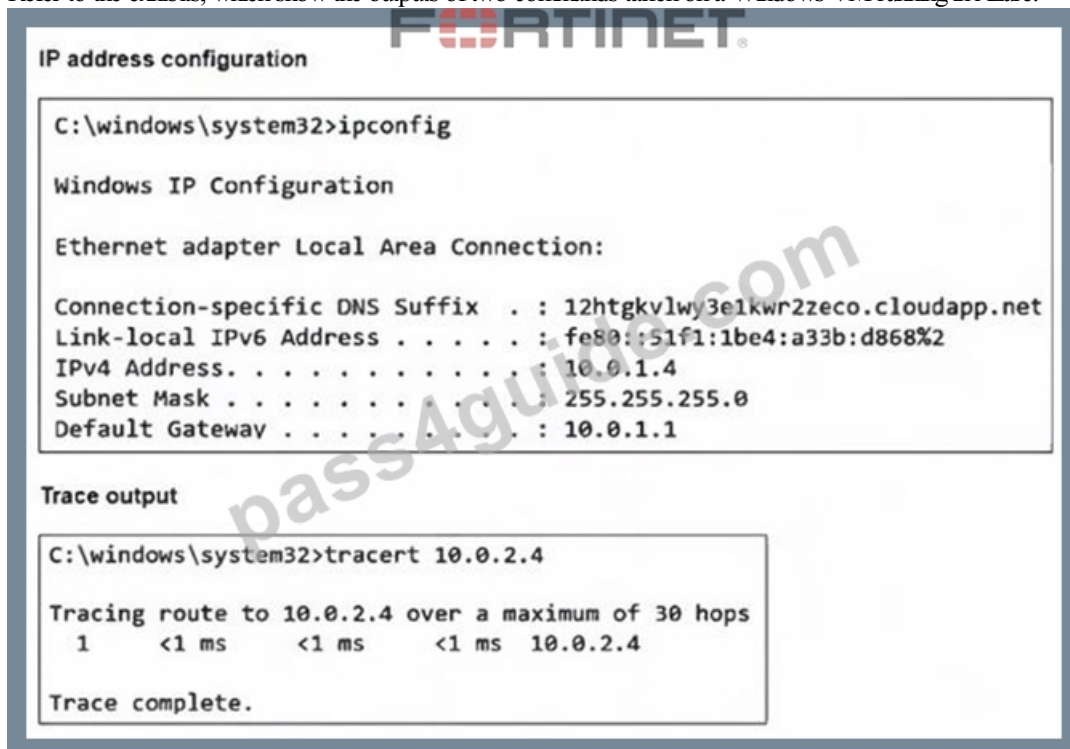

Answer: A

Explanation:

Infrastructure-as-a-Service (IaaS) allows you to deploy FortiWeb as a virtual machine in Azure, giving you granular control over vCPU and memory allocation. This model provides full flexibility over the compute resources and network configuration, which is essential for deploying and scaling security appliances like FortiWeb.

NEW QUESTION # 37

Refer to the exhibits, which show the outputs of two commands taken on a Windows VM running in Azure.

Which statement is true about the device with the IP address 10.0.2.4?

- A. It is on the same VNET as the Windows VM
- B. It is reachable through FortiGate in transparent mode
- C. It is provided by Azure for routing traffic among subnets
- D. It is on the same subnet as the Windows VM

Answer: A

Explanation:

The trace output shows only one hop to reach 10.0.2.4, indicating that the destination is in the same Azure virtual network (VNet) as the Windows VM. Since the VM's IP is 10.0.1.4 and the destination is 10.0.2.4, they are in different subnets, but Azure allows direct routing between subnets within the same VNet without additional hops.
