JPNTTestのSaviyntのSAVIGA-C01試験トレーニング資料はPDF形式とソフトウェアの形式で提供します。私たちは最も新しく、最も正確性の高いSaviyntのSAVIGA-C01試験トレーニング資料を提供します。長年の努力を通じて、JPNTTestのSaviyntのSAVIGA-C01認定試験の合格率が100パーセントになっていました。もし君はいささかな心配することがあるなら、あなたはうちの商品を購入する前に、JPNTTestは無料でサンプルを提供することができます。

## Saviynt SAVIGA-C01 認定試験の出題範囲:

トピック	出題範囲
トピック 1	<ul style="list-style-type: none"><li>Access Reviews: This section focuses on the access review and certification processes in Saviynt IGA. It covers campaign management, reviewer workflows, and remediation procedures. Saviynt IGA Administrators should be able to set up and manage effective access review campaigns.</li></ul>
トピック 2	<ul style="list-style-type: none"><li>Analytics: Saviynt IGA Administrators are expected to demonstrate knowledge of analytics capabilities in the Saviynt IGA platform. This section covers reporting, dashboards, and data analysis techniques.</li></ul>
トピック 3	<ul style="list-style-type: none"><li>Implement IGA Solutions: This section focuses on the practical implementation of IGA solutions using Saviynt. It covers project planning, requirements gathering, and solution design. Saviynt IGA Administrators should be able to translate business needs into technical solutions.</li></ul>
トピック 4	<ul style="list-style-type: none"><li>ARS: This section of the exam measures the skills of Saviynt IGA Administrators and covers the Access Request System (ARS) in Saviynt. It includes understanding the ARS workflow, configuring access requests, and managing approvals. Candidates should be able to set up and customize the ARS for different organizational needs. The exam assesses the ability to implement effective access request processes.</li></ul>
トピック 5	<ul style="list-style-type: none"><li>Deploy &amp; Manage: This section measures the skills of exam-takers in deploying and managing Saviynt IGA solutions. It covers installation procedures, upgrades, and ongoing maintenance tasks.</li></ul>
トピック 6	<ul style="list-style-type: none"><li>Saviynt IGA Implementation: This section focuses on the implementation aspects of Saviynt IGA solutions. It covers deployment strategies, integration with existing systems, and customization techniques.</li></ul>

## 便利なSAVIGA-C01最速合格 & 合格スムーズ SAVIGA-C01日本語解説集 | 有難いSAVIGA-C01テスト問題集

私たちが知っているように、一部の人は以前に試験に失敗し、SAVIGA-C01トレーニング資料を購入する前にこの苦しい試験に自信を失いました。私たちはここで悲しみを分けます。これから時間のかかる思考を捨てることができます。対照的に、それらは不明瞭なコンテンツを感じることなくあなたの可能性を刺激します。SAVIGA-C01試験準備を取得した後、試験期間中に大きなストレスにさらされることはありません。

### Saviynt IGA Certified Professional Exam (L100) 認定 SAVIGA-C01 試験問題 (Q35-Q40):

#### 質問 # 35

Which of the following features best describe the Authorization mechanism for the EIC application?

- A. WSRETRY Job
- B. SSO
- C. Security System

正解: C

解説:

The feature that best describes the Authorization mechanism for the EIC (Enterprise Identity Cloud) application in Saviynt is A. Security System. Here's an explanation:

\* Saviynt's Security System: This is the core component within Saviynt that handles authentication and authorization for various applications and resources, including EIC.

\* Authorization in EIC: The Security System determines what actions users are allowed to perform within EIC, such as:

\* Creating, updating, or deleting users.

\* Managing roles and entitlements.

\* Running reports.

\* Configuring connections.

\* Role-Based Access Control (RBAC): The Security System typically uses RBAC to manage these permissions. Users are assigned to roles, and roles are granted specific permissions within EIC.

\* Why Other Options Are Less Relevant:

\* B. SSO (Single Sign-On): SSO is an authentication mechanism that allows users to log in once and access multiple applications. While Saviynt supports SSO, it's not the primary authorization mechanism for EIC.

\* C. WSRETRY Job: This is a job related to retrying web service calls, not authorization.

#### 質問 # 36

As an Admin, you are required to set up an Entitlement Owner Campaign for Entitlements belonging to an Oracle ERP Endpoint by the Internal Audit team. The Campaign should be launched at the beginning of every month, and only Accounts and Entitlements that meet the prerequisites should be included in the Campaign.

Which of the following 2-key configurations would you recommend for achieving this?

- A. Cannot be achieved
- B. Use Advanced Configurations and set the Campaign expiry to 31 days
- C. Use Advanced Configurations and Preview mode and create the Campaign at the beginning of each month
- D. Use Campaign Template and the Schedule Later option

正解: D

解説:

To set up an Entitlement Owner Campaign for Entitlements belonging to an Oracle ERP Endpoint that launches at the beginning of every month, and includes only Accounts and Entitlements that meet the prerequisites, the 2-key configurations you should recommend are A. Use Campaign Template and the Schedule Later option. Here's a breakdown:

\* Campaign Template:

\* Purpose: Templates allow you to save a set of campaign configurations as a reusable template.

This is ideal for recurring campaigns with consistent settings.

- \* Benefits: Using a template saves time and ensures consistency across multiple campaign instances. You can define the scope (Oracle ERP Endpoint), Certifier type (Entitlement Owners), and other settings within the template.
- \* Prerequisites: You can include logic within the template to filter for Accounts and Entitlements that meet the defined prerequisites.
- \* Schedule Later option:
- \* Purpose: This option allows you to schedule the campaign to launch at a specific date and time in the future.
- \* Recurring Scheduling: You can configure the campaign to run on a recurring schedule, such as the beginning of every month.
- \* Automation: This automates the campaign launch process, eliminating the need for manual intervention each month.
- \* Why Other Options Are Less Suitable:
- \* B. Use Advanced Configurations and Preview mode and create the Campaign at the beginning of each month: This approach is manual and prone to errors. It doesn't leverage the automation benefits of templates and scheduling.
- \* C. Use Advanced Configurations and set the Campaign expiry to 31 days: While setting an expiry is important, it doesn't address the need for recurring monthly launches or using a template for consistent configuration.
- \* D. Cannot be achieved: This is incorrect; the scenario can be easily achieved using Campaign Templates and the Schedule Later option.

### 質問 # 37

Anitha, a manager, has a large number of users reporting to her, with most of them working remotely.

Which of the following Campaign Types would you recommend for this scenario to reduce certification fatigue for Anitha?

- A. Launch User Manager Campaign and then Self Certification Campaign on certified items
- B. Launch Service Account Campaign and then User Manager Campaign on certified items
- C. Launch Application Owner Campaign and then Self Certification Campaign on certified items
- **D. Launch a Self Certification Campaign and then User Manager Campaign on certified items**

正解: D

解説:

To reduce certification fatigue for Anitha, a manager with a large number of remote users, the recommended approach is C. Launch a Self Certification Campaign and then User Manager Campaign on certified items. Here's the rationale:

- \* Self Certification Campaign:
- \* Purpose: Allows users to review and certify their own access.
- \* Benefits for this scenario:
- \* Reduces Manager Burden: Shifts the initial review responsibility from Anitha to the individual users, who are most familiar with their own access needs.
- \* Scalability: Well-suited for large, distributed teams, as it doesn't rely solely on the manager's capacity.
- \* Empowerment: Gives users more control over their access and promotes a culture of accountability.
- \* User Manager Campaign on Certified Items:
- \* Purpose: Allows managers to review and certify their subordinates' access.
- \* Benefits when combined with Self Certification:
- \* Focus on Exceptions: Anitha can focus her review on items that were not self-certified or that require further scrutiny after the initial self-certification.
- \* Reduced Volume: The volume of items Anitha needs to review is significantly reduced, as users have already certified their own access.
- \* Increased Efficiency: Streamlines the manager's review process, making it more manageable and less time-consuming.
- \* Why Other Options Are Less Suitable:
- \* A. Launch User Manager Campaign and then Self Certification Campaign on certified items: This sequence is less effective because it puts the burden on the manager first, potentially leading to fatigue.
- \* B. Launch Application Owner Campaign and then Self Certification Campaign on certified items: Application Owner campaigns are not relevant to a manager's review of their subordinates' access.
- \* D. Launch Service Account Campaign and then User Manager Campaign on certified items: Service Account campaigns are for reviewing service accounts, not user access.

### 質問 # 38

\_\_\_\_\_ refers to any type of access that is associated with a managed system or application, such as groups, roles, permissions, or responsibilities.

- A. Workflows

- B. Accounts
- C. Endpoints
- **D. Entitlements**

正解: D

解説:

In Saviynt, "Entitlements" refers to any type of access granted to users within a managed system or application. This broad term encompasses various forms of access controls, including:

- \* Groups: Collections of users with shared access permissions.
- \* Roles: Sets of permissions that define a user's job function or responsibilities.
- \* Permissions: Specific access rights to resources or functionalities.
- \* Responsibilities: Duties or tasks associated with a particular role.

Why other options are incorrect:

- \* Endpoints: Refer to network devices or systems, not access rights.
- \* Workflows: Are automated processes for tasks like approvals, not access itself.
- \* Accounts: Represent user identities, not the specific access they have.

Saviynt IGA References:

- \* Saviynt Documentation: Saviynt's documentation consistently uses the term "Entitlements" to describe the various types of access it manages.
- \* Saviynt User Interface: The Saviynt interface uses "Entitlements" throughout its menus and features related to access management.

### 質問 # 39

What does the following image signify?

Assigning of Enterprise Role based on a dynamic variable city.

- A. Assigning of Enterprise Role based on users' department
- **B. Assigning of Enterprise Role based on users' location**
- C. Assigning of Enterprise Role based on concatenation of dynamic variable city and Finance

正解: B

解説:

The image signifies B. Assigning of Enterprise Role based on users' location. Here's a breakdown, assuming the image depicts a portion of a Saviynt User Update Rule configuration:

- \* Dynamic Variable "City": The image highlights the use of a dynamic variable called "city." This strongly suggests that the rule is using the user's location (city) as a key factor in determining role assignment.
- \* Saviynt's User Update Rules and Dynamic Variables: User Update Rules in Saviynt allow for the use of dynamic variables, which represent user attributes. These variables can be used in conditions and actions within the rule.
- \* Enterprise Role Assignment: The context of the question implies that the rule is assigning an Enterprise Role based on the value of this "city" variable.
- \* Example: The rule might be configured to assign an Enterprise Role like "Sydney-Users" to users whose "city" attribute is "Sydney."

\* Why Other Options Are Less Likely:

- \* A. Assigning of Enterprise Role based on users' department: There's no mention of "department" in the provided information.
- \* C. Assigning of Enterprise Role based on concatenation of dynamic variable city and Finance: While concatenation is possible in Saviynt, there's no indication that "Finance" is involved here. The focus seems to be solely on the "city" variable.

In conclusion: Based on the information given, the image most likely represents a Saviynt User Update Rule that assigns an Enterprise Role based on the user's location, as indicated by the dynamic variable "city."

### 質問 # 40
