

High Hit Rate NSK200 Testking - Easy and Guaranteed NSK200 Exam Success

NSK200 — Netskope Certified Cloud Security Integrator (NCCSI) | Study Notes

NSK200

Netskope Certified Cloud Security Integrator
(NCCSI) — Exam Study Notes

Based on NSCI&I Course • 9 Chapters • 6 Exam Domains

Category	Details
Exam Code	NSK200
Full Name	Netskope Certified Cloud Security Integrator (NCCSI)
Exam Fee	\$200 USD
Prerequisite	NSK100 — Netskope Certified Cloud Security Administrator (NCCSA)
Course	NSCI&I — Netskope Security Cloud Implementation & Integration (3 days)
Exam Domains	6 domains (highest weight: Fundamentals, DLP, Threat Protection)
Next Cert	Netskope Certified Cloud Security Expert
Target Roles	Security Engineer, Cloud Architect, CASB Implementation Specialist

COURSE CHAPTERS (NSCI&I)

- Chapter 1: SAML
- Chapter 2: Netskope Private Access (NPA)
- Chapter 3: Advanced DLP
- Chapter 4: Web Security
- Chapter 5: Netskope Advanced Analytics
- Chapter 6: Netskope REST API
- Chapter 7: Security Posture Management
- Chapter 8: Netskope Remote Browser Isolation (RBI)
- Chapter 9: Netskope Cloud Exchange

What's more, part of that DumpStillValid NSK200 dumps now are free: <https://drive.google.com/open?id=1JldqetzyyJFbsBOlUTZ8zqNcE6SaR4Ov>

We even guarantee our customers that they will pass Netskope NSK200 Exam easily with our provided study material and if they failed to do it despite all their efforts they can claim a full refund of their money (terms and conditions apply). The third format is the desktop software format which can be accessed after installing the software on your Windows computer or laptop. The Netskope Certified Cloud Security Integrator (NCCSI) has three formats so that the students don't face any serious problems and prepare themselves with fully focused minds.

Netskope NSK200 Exam Syllabus Topics:

Topic	Details
Topic 1	• Netskope User Activity and Threat Protection: This portion focuses on Netskope's capabilities in monitoring user behavior and identifying anomalies. It also covers the implementation of cloud application controls and detailed access policies. The section further delves into Netskope's approach to detecting cloud-based malware and its threat intelligence features, as well as cloud data security measures.
Topic 2	• Netskope Security Cloud Fundamentals: This domain covers the structure of Netskope Security Cloud. It explores the foundations of the Cloud Access Security Broker (CASB) the implementation of Netskope as a CASB solution.

Topic 3	• SWG functionalities for web traffic filtering and control: This section explores Netskope SWG's capabilities in URL filtering, protection against malware, and threat prevention strategies.
Topic 4	• Data discovery and classification for cloud storage: This section of the exam covers Data Loss and how to prevent it using DLP policies. Moreover, this section covers cloud encryption techniques related to data at rest and in transit.
Topic 5	• Integration with Third-Party Security Tools: In this module, the focus is on how Netskope can link with the current security infrastructure and how the adoption of Single Sign-On (SSO) and Active Directory integration is possible.

NSK200 Exam Revision Plan & Reliable NSK200 Exam Sample

These NSK200 mock tests are made for customers to note their mistakes and avoid them in the next try to pass NSK200 exam in a single try. These Netskope NSK200 mock tests will give you real NSK200 exam experience. This feature will boost your confidence when taking the Netskope NSK200 Certification Exam. The 24/7 support system has been made for you so you don't feel difficulty while using the product. In addition, we offer free demos and up to 1 year of free Netskope Dumps updates. Buy It Now!

Netskope Certified Cloud Security Integrator (NCCSI) Sample Questions (Q23-Q28):

NEW QUESTION # 23

You notice that your Netskope client icon has a red dot and see "Disabled due to error" when hovering the mouse over the icon. What are two reasons for this message? (Choose two.)

- A. The client traffic is directed over IPsec.
- B. The client service is manually stopped.
- C. The client health check has failed.
- D. The steering exceptions are incorrect.

Answer: B,C

Explanation:

Two reasons for the message "Disabled due to error" when hovering the mouse over the Netskope client icon are A. The client service is manually stopped and C. The client health check has failed. The client service is a background process that runs the Netskope client on the user's device and communicates with the Netskope cloud. If the client service is manually stopped by the user or by another program, the Netskope client will be disabled and show a red dot on the icon1. The client health check is a feature that monitors the status of the Netskope client and performs self-repair actions if any issues are detected. If the client health check has failed, it means that the Netskope client has encountered a critical error that cannot be fixed automatically, such as corrupted files or registry entries. In this case, the Netskope client will be disabled and show a red dot on the icon2. Therefore, options A and C are correct and the other options are incorrect. References: Troubleshooting Netskope Client - Netskope Knowledge Portal, Client Health Check - Netskope Knowledge Portal

NEW QUESTION # 24

Your company has many users that are remote and travel often. You want to provide the greatest visibility into their activities, even while traveling.

Using Netskope, which deployment method would be used in this scenario?

- A. Use a GRE tunnel.
- B. Use an IPsec tunnel.
- C. Use proxy chaining.
- D. Use a Netskope client.

Answer: D

Explanation:

Deploying the Netskope client on remote and traveling users' devices provides the highest level of visibility into their activities regardless of their location. The Netskope client can steer traffic securely to the Netskope Security Cloud, offering consistent monitoring and protection.

NEW QUESTION # 25

Which object would be selected when creating a Malware Detection profile?

- **A. File profile**
- B. DLP profile
- C. Domain profile
- D. User profile

Answer: A

Explanation:

A file profile is an object that contains a list of file hashes that can be used to create a malware detection profile. A file profile can be configured as an allowlist or a blocklist, depending on whether the files are known to be benign or malicious. A file profile can be created in the Settings > File Profile page¹. A malware detection profile is a set of rules that define how Netskope handles malware incidents. A malware detection profile can be created in the Policies > Threat Protection > Malware Detection Profiles page². To create a malware detection profile, one needs to select a file profile as an allowlist or a blocklist, along with the Netskope malware scan option. The other options are not objects that can be selected when creating a malware detection profile.

NEW QUESTION # 26

Your organization has three main locations with 30,000 hosts in each location. You are planning to deploy Netskope using IPsec tunnels for security.

What are two considerations to make a successful connection in this scenario? (Choose two.)

- A. browsers in use
- **B. number of hosts**
- **C. redundant POPs**
- D. operating systems

Answer: B,C

Explanation:

Explanation

To deploy Netskope using IPsec tunnels for security in this scenario, two considerations to make a successful connection are C. redundant POPs and D. number of hosts. Redundant POPs are Points of Presence that are geographically distributed data centers that host the Netskope cloud platform. You need to consider redundant POPs to ensure high availability and resiliency of your IPsec tunnels in case of a failure or outage in one of the POPs. You can configure multiple IPsec tunnels from your network to different POPs and use dynamic routing protocols such as BGP to load balance and failover the traffic¹. Number of hosts is the number of devices or endpoints that will use the IPsec tunnels to access the cloud services. You need to consider the number of hosts to estimate the bandwidth and throughput requirements of your IPsec tunnels and choose the appropriate POPs that can handle the traffic volume. You can use the Netskope Bandwidth Calculator tool to estimate the bandwidth and throughput based on the number of hosts, locations, and cloud services².

Therefore, options C and D are correct and the other options are incorrect. References: IPsec - Netskope Knowledge Portal, Netskope Bandwidth Calculator

NEW QUESTION # 27

Your company has Microsoft Azure ADFS set up as the Identity Provider (IdP). You need to deploy the Netskope client to all company users on Windows laptops without user intervention.

In this scenario, which two deployment options would you use? (Choose two.)

- **A. Deploy the Netskope client with Microsoft GPO.**
- B. Deploy the Netskope client using IdP.

- C. Deploy the Netskope client using an email Invitation.
- **D. Deploy the Netskope client with SCCM.**

Answer: A,D

Explanation:

To deploy the Netskope client to all company users on Windows laptops without user intervention, you can use either SCCM or GPO. These are two methods of packaging the application and pushing it silently to the user's device using Microsoft tools⁴. These methods do not require the user to have local admin privileges or to initiate the installation themselves. They also allow enforcing the use of the client through company policy. The Netskope client can authenticate the user using Azure ADFS as the identity provider, as long as the UPN of the logged in user matches the directory⁵.

NEW QUESTION # 28
