100% Pass 3V0-21.23 - High-quality VMware vSphere 8.x Advanced Design Latest Braindumps Book

The latest technologies have been applied to our 3V0-21.23 actual exam as well since we are at the most leading position in this field. You can get a complete new and pleasant study experience with our 3V0-21.23 study materials. Besides, you have varied choices for there are three versions of our 3V0-21.23 practice materials. At the same time, you are bound to pass the exam and get your desired certification for the validity and accuracy of our 3V0-21.23 training guide.

VMware vSphere 8.x Advanced Design Sample Questions (Q38-Q43):

NEW QUESTION # 38

An architect has made the following assumptions:

The customer will provide licensing for the vSphere platform.

The storage hardware has sufficient capacity for future workload scale.

The data center offers sufficient power, cooling and rack space for workload scale.

Which two risks must be documented in the design document in response to these assumptions? (Choose two.)

- A. The assumptions must be approved by the customer, architect and the architect's company.
- B. The licenses provided by the customer only have support entitlement for one year.
- C. The customer may not have sufficient data center cooling, power, and physical rack space available.
- D. The storage may not have capacity to accommodate 20% year over year virtual machine growth.
- E. The customer may not have an existing licensing subscription that covers features the architect intends to use.

Answer: D,E

Explanation:

The storage may not have capacity to accommodate 20% year-over-year virtual machine growth.

This is a risk because, while the assumption is that the storage hardware has sufficient capacity, there is a possibility that the hardware may not be able to support future growth, especially if the customer's workload grows faster than expected. Documenting this risk ensures that the design considers potential capacity constraints.

The customer may not have an existing licensing subscription that covers features the architect intends to use.

This is a risk because although the assumption is that the customer will provide licensing, there may be discrepancies between the features required for the design and the customer's existing licensing. This risk ensures that the architect verifies that the customer's licensing aligns with the solution requirements.

NEW QUESTION # 39

During the installation of ESXi, what is the minimum number of network interfaces required for management and vMotion traffic, respectively?

- A. 0, 1
- B. 2, 2
- C. 1, 0
- **D. 1, 1**

Answer: D

NEW QUESTION # 40

Which type of requirement focuses on the processing power and resources needed by the system?

- A. Storage requirements
- **B. Compute requirements**
- C. Network requirements
- D. Performance requirements

Answer: B

NEW QUESTION # 41

Which is a benefit of using vSAN stretched clusters in VMware Cloud Foundation?

- A. To simplify physical network configurations by automatically configuring the required network components
- B. To improve application performance by reducing network latency between availability zones
- **C. To enable high availability of virtual machines across different availability zones**
- D. To reduce the cost by eliminating the need for additional hardware and software components

Answer: C

Explanation:

To enable high availability of virtual machines across different availability zones.

vSAN stretched clusters provide high availability by replicating virtual machine data across two geographically separated sites (or availability zones). This ensures that in the event of a failure at one site, the virtual machines can continue running from the other site, minimizing downtime and ensuring business continuity. The solution is particularly useful for disaster recovery and fault tolerance across multiple sites, meeting the requirement for high availability across different availability zones.

NEW QUESTION # 42

An architect is designing the expansion of an existing vSphere 7 environment. The customer is requesting a design for a new cluster to support the anticipated future business growth. The requirements specified for the existing environment design must be considered when designing the new cluster.

The existing design has the following requirements:

- REQ01 The environment has an availability target of 99.5% for all infrastructure.

- REQ02 The recovery time objective (RTO) for Tier 1 virtual machines is one hour.
 - REQ03 Windows and Linux virtual machines must reside on separate clusters.
 - REQ04 Access to the management cluster within the environment must be controlled.
- Which of the listed requirements would be classified as a functional requirement?

- A. Windows and Linux virtual machines must reside on separate clusters
- **B. Access to the management cluster within the environment must be controlled**
- C. The recovery time objective (RTO) for Tier 1 virtual machines is one hour
- D. The environment has an availability target of 99.5% for all infrastructure

Answer: B
