

Unique, Full Length Exams - New VMware 2V0-17.25 Practice Exam

P.S. Free & New 2V0-17.25 dumps are available on Google Drive shared by Real4Prep: <https://drive.google.com/open?id=1rlPSNzp1p9y26mY-VjH9zu-tOq-isKn2>

In order to meet the different needs of customers, we have created three versions of our 2V0-17.25 guide questions. Of course, the content of the three versions is exactly the same, but the displays are the totally different, so you only need to consider which version of our 2V0-17.25 study braindumps you prefer. Perhaps you can also consult our opinions if you don't know the difference of these three versions. Or you can free download the demos of the 2V0-17.25 exam braindumps to check it out.

After you used Real4Prep VMware 2V0-17.25 Dumps, you still fail in 2V0-17.25 test and then you will get FULL REFUND. This is Real4Prep's commitment to all candidates. What's more, the excellent dumps can stand the test rather than just talk about it. Real4Prep test dumps can completely stand the test of time. Real4Prep present accomplishment results from practice of all candidates. Because it is right and reliable, after a long time, Real4Prep exam dumps are becoming increasingly popular.

Reliable 2V0-17.25 Exam Dumps & Sample 2V0-17.25 Exam

Using our products does not take you too much time but you can get a very high rate of return. Our 2V0-17.25 quiz guide is of high quality, which mainly reflected in the passing rate. We can promise higher qualification rates for our 2V0-17.25 exam question than materials of other institutions. Because our products are compiled by experts from various industries and they are based on the true problems of the past years and the development trend of the industry. What's more, according to the development of the time, we will send the updated materials of 2V0-17.25 Test Prep to the customers soon if we update the products. Under the guidance of our study materials, you can gain unexpected knowledge. Finally, you will pass the exam and get a VMware certification.

VMware 2V0-17.25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">VMware Cloud Foundation Fundamentals: This section of the exam measures the skills of Private Cloud Engineers and covers the basic building blocks of VMware Cloud Foundation. It includes the vision and use cases for private cloud, along with the value it provides to businesses. Candidates are expected to understand compute fundamentals such as deploying and managing vCenter, ESXi, clusters, and virtual machines. Storage fundamentals include configuring vSphere storage, setting up vSAN clusters, applying storage policies, and understanding resilience options. Networking fundamentals are also assessed, with a focus on configuring connectivity, fabrics, routing, and network services in a VMware environment.

Topic 2	<ul style="list-style-type: none"> IT Architectures, Technologies, Standards: This section of the exam measures the skills of Cloud Architects and focuses on understanding the broader context of IT architectures, common technologies, and industry standards. While it does not have testable objectives, it sets the foundation for how VMware Cloud Foundation aligns with enterprise cloud strategies.
Topic 3	<ul style="list-style-type: none"> Deploy, Configure, and Operate VMware Cloud Foundation (VCF): This section of the exam measures the skills of VCF Administrators and goes in-depth into deploying, configuring, and managing VMware Cloud Foundation. The deployment portion covers identifying deployment models, configuring private cloud environments, and setting up workload domains and networking. The management objectives focus on lifecycle operations such as fleet management, identity and role-based access, licensing, certificate handling, and importing existing vCenters. Operations are assessed through capabilities like monitoring health, logs, networks, and storage, along with creating dashboards, configuring alerts, and ensuring compliance. The automation portion evaluates skills in using VCF Automation for multi-tenancy, provider networking, content libraries, governance policies, and extensibility to automate business processes. It also includes knowledge of deploying Supervisor-based services within Cloud Foundation.
Topic 4	<ul style="list-style-type: none"> Plan and Design the VMware by Broadcom Solution: This section of the exam measures the skills of Solution Designers and emphasizes the ability to plan and design VMware by Broadcom solutions. Although no testable objectives are defined here, it reinforces the importance of architectural planning and design considerations for large-scale cloud deployments.

VMware Cloud Foundation 9.0 Administrator Sample Questions (Q75-Q80):

NEW QUESTION # 75

When sizing a new vSphere cluster with vSAN enabled, which resource often becomes the most critical to avoid a storage bottleneck for VMs?

- A. Number of VMFS extents
- B. Cache tier SSD capacity on each host
- C. CPU frequency per core
- D. vCenter license type

Answer: B

Explanation:

For vSAN, ensuring adequate flash cache capacity and performance is crucial to avoid storage bottlenecks. CPU frequency is important but less critical for vSAN's storage layer, the vCenter license does not govern performance, and VMFS extents are not used in vSAN datastores.

NEW QUESTION # 76

An administrator is tasked to upgrade an existing VMware Cloud Foundation (VCF) 5.2 deployment to VCF 9.0. The existing deployment includes the following components:

- Aria Operations
- Aria Automation

Which three components must be upgraded or deployed first? (Choose three.)

- A. Automatically upgrade Aria Automation to VCF Automation 9.0.
- B. Automatically upgrade Aria Operations to VCF Operations 9.0.
- C. Manually upgrade Aria Operations to VCF Operations 9.0.
- D. Deploy VCF Installer appliance.
- E. Deploy of an NSX Manager 9.0 instance.
- F. Manually upgrade Aria Automation to VCF Automation 9.0.

Answer: C,D,E

Explanation:

The VCF Installer appliance must be deployed first because it orchestrates the VCF 9.0 bring-up and upgrade workflow. An NSX Manager 9.0 instance must be deployed early since VCF 9.0 requires NSX 9.0 as a foundational component. Existing Aria

Operations must be manually upgraded to VCF Operations 9.0 to meet compatibility and prerequisite requirements before VCF Automation can be upgraded or integrated.

NEW QUESTION # 77

An administrator is responsible for the management of a VMware Cloud Foundation (VCF)-based private cloud. The environment is configured in the following ways:

A single Organization for VM Applications with 50 application development projects.

Relevant configuration for the FitnessTrackerApp project:

Project Administrators: FTA_Admins (Group)

Project Members: FTA_Developers (Group), FTA_LeadDevelopers (Group)

Provisioning Zone(s): vcf-wld-01

The administrator has been tasked with ensuring that the newly created catalog item (Mobile Application Backend) is initially only visible to the Lead Developers of the FitnessTrackerApp project.

The administrator has already completed:

Logged into VCF Automation.

Updated the Content Source to include the Mobile Application Backend blueprint.

Which four additional steps must the administrator take to complete the objective? (Choose four.)

- A. Create a new Deployment Limit Policy.
- B. Add the FTA_Developers Group to the policy.
- C. Add the Mobile Application Backend catalog item to the new policy.
- D. Add the FTA_LeadDevelopers Group to the new policy.
- E. Configure the Scope of the new policy to be Organization.
- F. Configure the Scope of the new policy to be Project and select the FitnessTrackerApp project.
- G. Create a new Content Sharing Policy.

Answer: C,D,F,G

Explanation:

The VCF 9.0 Automation Guide - Content Sharing Policies describes how to control catalog item visibility. Administrators create Content Sharing Policies to restrict which groups can see specific catalog items.

Steps required for this scenario:

Create a new Content Sharing Policy (D): This policy governs catalog item access.

Add the catalog item to the new policy (B): The Mobile Application Backend blueprint must be explicitly added.

Configure the scope as Project → FitnessTrackerApp (C): This ensures the catalog restriction applies only within the FitnessTrackerApp project.

Add the FTA_LeadDevelopers Group (F): Grants visibility only to this group, fulfilling the requirement that only Lead Developers initially see the item.

Incorrect options:

Deployment Limit Policy (A) controls resource limits, not catalog visibility.

FTA_Developers (E) should not be included, as the requirement is Lead Developers only.

Organization scope (G) would expose the item to all projects, which violates the requirement.

Thus, the administrator must configure a Content Sharing Policy, add the catalog item, scope it to the FitnessTrackerApp project, and restrict it to the Lead Developers group.

NEW QUESTION # 78

An administrator is responsible for managing a VMware Cloud Foundation (VCF) fleet. The administrator has been tasked with creating a solution that allows Kubernetes development teams to complete the self-service creation of Active Directory (AD) accounts with the following requirements:

- Only users within the Development tenant should be able to create user accounts.
- Users must be able to create and destroy user accounts in the development AD only.
- The administrator has already deployed a dedicated VCF Operations Orchestrator for the Development tenant.

What four additional tasks must the administrator complete to meet the stated objective? (Choose four.)

- A. Publish the Active Directory User creation action to the self-service catalog in VCF Automation through the Content Hub.

- B. Publish the Active Directory User creation workflow to the self-service catalog in VCF Automation through the Content Hub.
- C. Configure the VCF Operations Orchestrator integration to utilize the embedded VCF Operations Orchestrator.
- D. Configure the VCF Operations Orchestrator Active Directory plugin to connect to the development Active Directory.
- E. Configure the VCF Operations Orchestrator Active Directory plugin to connect to the production Active Directory.
- F. Create a Custom Resource object and select the appropriate VCF Operations Orchestrator workflows for object creation and destruction.
- G. Configure the VCF Operations Orchestrator integration to connect to the dedicated VCF Operations Orchestrator.

Answer: B,D,F,G

Explanation:

Orchestrator Integration (B): The tenant must be connected to the dedicated Orchestrator instance rather than the embedded one.

Documentation notes: "Each tenant can integrate with its own Orchestrator endpoint for workflow execution." AD Plugin

Configuration (E): The Orchestrator Active Directory plugin must be configured against the development AD only, ensuring that the development team does not impact the production directory.

Publish Workflow (C): The AD user creation workflow must be published to the VCF Automation catalog using the Content Hub.

Actions alone are insufficient; workflows are the full automation logic exposed to end users.

Custom Resource Object (F): To enable developers to create and destroy AD accounts, a Custom Resource object must be created in VCF Automation and mapped to the Orchestrator workflows. This provides lifecycle capabilities (create/destroy) in the self-service catalog.

NEW QUESTION # 79

Which Kubernetes object is used to grant permissions to a cluster-wide resource?

- A. ClusterRoleAccess
- B. ClusterRoleBinding
- C. RoleReference
- D. RoleBinding

Answer: B

Explanation:

In Kubernetes RBAC, ClusterRoleBinding is the mechanism for granting permissions to resources that are not namespace-scoped.

The documentation integrated into VCF 9.0 explains: "ClusterRoleBinding binds a user, group, or service account to a ClusterRole, granting cluster-wide permissions to non-namespaced resources such as nodes, storage classes, or persistent volumes." A

RoleBinding grants access to namespace-scoped resources. RoleReference is a field within a RoleBinding/ClusterRoleBinding object, not a standalone object. ClusterRoleAccess is not a valid Kubernetes construct.

Thus, to assign permissions at a cluster-wide level, the correct object is ClusterRoleBinding.

NEW QUESTION # 80

.....

Young people are facing greater employment pressure. It is imperative to increase your competitiveness. Selecting 2V0-17.25 learning quiz, you can get more practical skills. First, you will increase your productivity so that you can accomplish more tasks. Second, users who use 2V0-17.25 Training Materials can pass exams more easily. An international 2V0-17.25 certificate means that you can get more job opportunities. Seize the opportunity to fully display your strength. Will the future you want be far behind?
