

Peoplecert DevOps-Foundation Reliable Dumps Sheet, Real DevOps-Foundation Exam Answers

P.S. Free & New DevOps-Foundation dumps are available on Google Drive shared by Pass4Leader:
<https://drive.google.com/open?id=1Xu8DvwDK0aK3zMhphv8PuqTH2SbUCY3d>

As we all know that if you can obtain the DevOps-Foundation certification, your life will change from now on. There will be various opportunities waiting for you. You take the initiative. It is up to you to make a decision. We only live once. Don't postpone your purpose and dreams. Our DevOps-Foundation Real Exam will escort your dreams. You will get better jobs as well as higher salaries to lead a better life. Come to fight for your bright future and buy our DevOps-Foundation practice braindumps right now!

Peoplecert DevOps-Foundation Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Exploring DevOps: This section of the exam measures the skills of DevOps engineers and covers the foundations of DevOps, including its emergence as a critical discipline in the digital era. It introduces learners to the basic purpose, evolution, and significance of DevOps in modern software and infrastructure environments.
Topic 2	<ul style="list-style-type: none"> Sharing, Shadowing and Evolving: This section of the exam measures the skills of IT operations specialists and covers the collaborative and adaptive elements of DevOps in enterprise settings. It explores leadership, typical barriers and risks, and outlines how organisations can evolve their DevOps practices through continuous learning, peer shadowing, and experience-based transformation.
Topic 3	<ul style="list-style-type: none"> Business and Technology Frameworks: This section of the exam measures the skills of IT operations specialists and covers various supporting frameworks that intersect with DevOps. These include Agile and Lean, IT Service Management, Value Stream Management, Site Reliability Engineering, Safety Culture, Learning Organisations, and Continuous Funding models that enable long-term adaptability.

Topic 4	<ul style="list-style-type: none"> • Measurement, Metrics, and Reporting: This section of the exam measures the skills of DevOps engineers and covers metrics that help monitor and evaluate the performance of DevOps practices. Topics include speed, quality, culture, change lead time, cycle time, and the use of dashboards, value-driven metrics, and AIOps in reporting and decision-making.
Topic 5	<ul style="list-style-type: none"> • Culture, Behaviours, Operating Models: This section of the exam measures the skills of DevOps engineers and covers how to assess and evolve organisational culture in relation to DevOps transformation. It includes concepts such as Cultural Debt, Behavioural Models, and Organisational Maturity, helping professionals understand team dynamics and readiness for change.

Hot DevOps-Foundation Reliable Dumps Sheet | Pass-Sure Real DevOps-Foundation Exam Answers: PeopleCert DevOps Foundationv3.6Exam

All of our users are free to choose our DevOps-Foundation guide materials on our website. In order to help users make better choices, we also think of a lot of ways. First of all, we have provided you with free trial versions of the DevOps-Foundation exam questions. And according to the three versions of the DevOps-Foundation Study Guide, we have three free demos. The content of the three free demos is the same, and the displays are different accordingly. You can try them as you like.

Peoplecert PeopleCert DevOps Foundationv3.6Exam Sample Questions (Q33-Q38):

NEW QUESTION # 33

Which of the following of Continuous Delivery does NOT contribute positively to SDO Performance?

- A. Culture of psychological safety
- **B. Heavyweight Change Process**
- C. Trunk-based development
- D. Cloud

Answer: B

Explanation:

High-performing organizations use Continuous Delivery practices to improve Software Delivery and Operational (SDO) performance.

* B: Psychological safety encourages open communication, incident reporting, and learning from failures.

* C: Trunk-based development reduces integration issues and supports continuous integration/delivery.

* D: Cloud technologies provide scalable, on-demand environments that speed up delivery and testing.

On the other hand, A-a heavyweight change process-slows down delivery, increases lead time, and often fails to improve change success rates. Research cited in Accelerateshows that manual, centralized change approvals correlate with lower performance, while automated, peer-reviewed changes produce better reliability and faster delivery.

NEW QUESTION # 34

Which Lean tool provides a collaborative board that makes work visible, allows work in progress to be limited, and optimizes flow?

- A. Continuous Delivery
- B. Improvement Kata
- **C. Kanban**
- D. Value Stream Mapping

Answer: C

Explanation:

Kanban is a Lean visual management method that helps teams control and improve workflow. The board displays tasks in columns representing process stages, enabling:

- * Visualization of work items and bottlenecks
- * Limiting work in progress (WIP) to improve flow and reduce multitasking
- * Tracking throughput and cycle time for continuous improvement

B (Value Stream Mapping) is a Lean analysis tool, not a visual board for ongoing work. C (Improvement Kata) is a structured improvement method, and D (Continuous Delivery) is a software delivery practice, not a visual workflow tool.

Therefore, A - Kanban is correct.

Kanban by David J. Anderson - Principles and Practices

NEW QUESTION # 35

The goal of which role is the creation of ultra-scalable and highly reliable software systems?

- A. Software engineer
- B. Product Owner
- C. Site resilience engineer
- **D. Site reliability engineer**

Answer: D

Explanation:

The Site Reliability Engineer (SRE) role originated at Google and is now widely recognized. SREs apply software engineering principles to IT operations to create systems that are scalable, reliable, and highly available. Their responsibilities include:

- * Designing reliability into systems (SLIs, SLOs, SLAs)
- * Automating operational tasks to reduce toil
- * Building monitoring and alerting systems
- * Performing capacity planning and disaster recovery exercises

A (Site resilience engineer) is not a standard industry term. C (Software engineer) focuses on developing applications but not specifically on operational reliability. D (Product Owner) is a role in Agile frameworks that manages product backlog and priorities, not system reliability.

Thus, the correct answer is B - Site Reliability Engineer.

NEW QUESTION # 36

Why is it important for IT to understand and support the business' "why"?

- A. IT must understand why they should develop or acquire certain software products
- **B. IT must understand why the organization exists and its purpose, cause and belief**
- C. IT must understand why the organization will benefit from a DevOps approach
- D. IT must understand specific business processes so that they can support the organization properly

Answer: B

Explanation:

One of the core DevOps values is aligning IT efforts with business objectives - understanding the business

"why." The Foundation syllabus highlights the need for IT to understand the organization's purpose, cause, and belief. Without this, IT can't effectively support value delivery or drive digital transformation.

Understanding the organizational "why" connects daily activities to strategic objectives, a key DevOps mindset.

Reference: DevOps Foundation v3.6 syllabus section 1.2; "Start with Why" by Simon Sinek.

NEW QUESTION # 37

What does the Theory of Constraints recognise?

- A. All of the Above
- B. A process will only meet the capacity of its constraints
- C. Every process has at least one constraint that affects its ability to meet its goal
- D. Improving constraints is the fastest way to improve the entire system

Answer: A

Explanation:

The Theory of Constraints (ToC), as referenced in PeopleCert DevOps Foundation, states:

- * A: Every system has at least one limiting factor (constraint) that determines overall performance.
 - * B: System throughput is limited by the capacity of the constraint; improving non-constraints has minimal impact.
 - * C: Focusing improvement efforts on the constraint is the most effective way to improve the performance of the entire system.
- In DevOps, constraints may appear in testing, change approvals, environment provisioning, or deployment. By identifying and alleviating these bottlenecks, organizations improve flow and reduce lead time. Since all three statements (A, B, C) are accurate representations of ToC, the correct answer is D - All of the Above.
