Cisco Automating and Programming Cisco Collaboration Solutions Sample Questions (Q120-Q125):

NEW QUESTION # 120
Refer to the exhibit. Which YANG model was used as a basis to create the XML instance in the exhibit?

- A.
- B.
- C.
- D.

Answer: B

Explanation:
The XML instance uses a <neighbors> container that allows multiple <peer-ip-address>, <remote-as>, and multiple <enabled-af> entries under each neighbor, matching the structure and leaf-list of enabled-af. This aligns with the way address families are modeled as a list in the YANG definition.

NEW QUESTION # 121

The Cisco IOS and IOS XE qos pre-classify command allows which kind of packet classification on IP packets that are encapsulated with GRE and IPsec?

- A. allows for packets to be classified based on the ToS byte values before packet encryption
- B. allows for packets to be classified based on the ToS byte values after packet encryption
- C. allows for packets to be classified based on the packet payload after packet encryption
- D. allows for packets to be classified based on the packet payload before packet encryption
- E. allows for packets to be classified based on the packet header parameters other than the ToS byte values after packet encryption

Answer: A

Explanation:
http://www.cisco.com/en/US/tech/tk543/tk545/technologies_tech_note09186a008017405e.shtml The qos pre-classify command
When packets are encapsulated by tunnel or encryption headers, QoS features are unable to examine the original packet headers and correctly classify the packets. Packets traveling across the same tunnel have the same tunnel headers, so the packets are treated identically if the physical interface is congested. With the introduction of the Quality of Service for Virtual Private Networks (VPNs) feature, packets can now be classified before tunneling and encryption occur.
In this example, tunnel0 is the tunnel name. The qos pre-classify command enables the QoS for VPNs feature on tunnel0:
Router(config)# interface tunnel0
Router(config-if)# qos pre-classify
