

Quiz 2026 High-quality Fortinet Relevant NSE5_FNC_AD-7.6 Answers

One of the most important functions of our APP online version which is contained in our NSE5_FNC_AD-7.6 preparation questions are that can support almost all electronic equipment, including the computer, mobile phone and so on. If you want to prepare for your exam by the computer, you can buy our NSE5_FNC_AD-7.6 training quiz, because our products can work well by the computer. Of course, if you prefer to study by your mobile phone, our NSE5_FNC_AD-7.6 study materials also can meet your demand.

In modern society, we are busy every day. So the individual time is limited. The fact is that if you are determined to learn, nothing can stop you! You are lucky enough to come across our NSE5_FNC_AD-7.6 exam materials. Our NSE5_FNC_AD-7.6 study guide can help you improve in the shortest time. Even you do not know anything about the NSE5_FNC_AD-7.6 Exam. It absolutely has no problem. You just need to accept about twenty to thirty hours' guidance of our NSE5_FNC_AD-7.6 learning prep, it is easy for you to take part in the exam.

NSE5_FNC_AD-7.6 Valid Test Vce, NSE5_FNC_AD-7.6 Training Solutions

Facing the incoming Fortinet NSE5_FNC_AD-7.6 Exam, you may feel stained and anxious, suspicious whether you could pass the exam smoothly and successfully. Actually, you must not impoverish your ambition. Our suggestions are never boggle at difficulties. It is your right time to make your mark.

Fortinet NSE 5 - FortiNAC-F 7.6 Administrator Sample Questions (Q13-Q18):

NEW QUESTION # 13

A network administrator is troubleshooting a network access issue for a specific host. The administrator suspects the host is being assigned a different network access policy than expected.

Where would the administrator look to identify which network access policy, if any, is being applied to a particular host?

- A. The Connections view
- **B. The Policy Details view for the host**
- C. The Port Properties view of the hosts port
- D. The Policy Logs view

Answer: B

Explanation:

When troubleshooting network access in FortiNAC-F, it is often necessary to verify exactly why a host has been granted a specific level of access. Since FortiNAC-F evaluates policies from the top down and assigns access based on the first match, an administrator needs a clear way to see the results of this evaluation for a specific live endpoint.

The Policy Details (C) view is the designated tool for this purpose. By navigating to the Hosts > Hosts (or Adapter View) in the Administration UI, an administrator can search for the specific MAC address or IP of the host in question. Right-clicking on the host record reveals a context menu from which Policy Details can be selected. This view provides a real-time "look" into the policy engine's decision for that specific host, showing the Network Access Policy that was matched, the User/Host Profile that triggered the match, and the resulting Network Access Configuration (VLAN/ACL) currently applied.

NEW QUESTION # 14

During the testing of a newly modeled infrastructure switch, the administrator is not seeing hosts as they connect or move from one port to another.

What would cause this issue?

- A. Layer 3 polling is failing.
- B. Contact polling is not configured.
- C. The default scheduled polling is disabled.
- **D. MAC notification traps are misconfigured.**

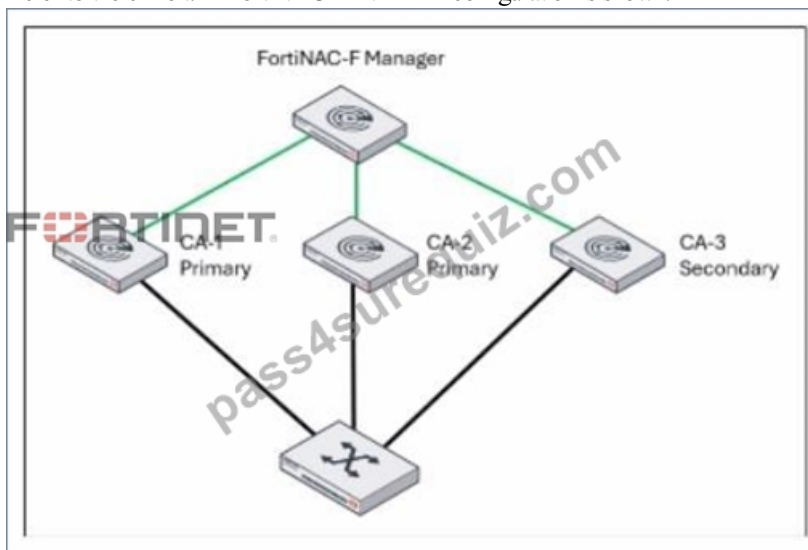

Answer: D

Explanation:

FortiNAC-F relies on correctly configured MAC notification (link) traps to detect hosts connecting or moving between ports in real time. If these traps are misconfigured, the system will not receive port-level MAC change events, so newly connected or moved hosts will not be detected as expected.

NEW QUESTION # 15

Refer to the exhibit. A FortiNAC-F N+1 HA configuration is shown.

What will occur if CA-2 fails?

- A. CA-1 and CA-3 will operate as a 1+1 HA cluster with CA-3 acting as a hot standby.
- **B. CA-3 will be promoted to a primary and FortiNAC-F manager will load balance between CA-1 and CA-3.**
- C. CA-3 will continue to operate as a secondary in an N+1 HA configuration.
- D. CA-3 will be promoted to a primary and share management responsibilities with CA-1.

Answer: B

Explanation:

In an N+1 HA architecture managed by a FortiNAC-F Manager, if a primary CA fails, an available secondary CA is automatically promoted to primary. After CA-2 fails, CA-3 is promoted to a primary role, and the FortiNAC-F Manager load balances management and enforcement responsibilities between the remaining primary CAs, CA-1 and CA-3.

NEW QUESTION # 16

While deploying FortiNAC-F devices in a 1+1 HA configuration, the administrator has chosen to use the shared IP address option. Which condition must be met for this type of deployment?

- A. The isolation network type is Layer 2.
- B. There is a direct cable link between FortiNAC-F devices.
- C. The isolation network type is layer 3.
- **D. The primary and secondary administrative interfaces are on the same subnet.**

Answer: D

Explanation:

In a 1+1 High Availability (HA) deployment, FortiNAC-F supports two primary methods for management access: individual IP addresses or a Shared IP Address (also known as a Virtual IP or VIP). The Shared IP option is part of a Layer 2 HA design, which simplifies administration by providing a single URL or IP that always points to whichever appliance is currently in the "Active" or "In Control" state.

For a Shared IP configuration to function correctly, the Primary and Secondary administrative interfaces (port1) must be on the same subnet. This requirement exists because the Shared IP is a logical address that is dynamically assigned to the physical interface of the active unit. Since only one unit can own the IP at a time, both units must reside on the same broadcast domain (Layer 2) to ensure that ARP requests for the Shared IP are correctly answered and that the gateway remains reachable regardless of which unit is active. If the appliances were on different subnets (a Layer 3 HA design), a shared IP could not be used because it cannot "float" across different network segments; instead, administrators would need to manage each unit via its unique physical IP or use a FortiNAC Manager.

"For L2 HA configurations, click the Use Shared IP Address checkbox and enter the Shared IP Address information... If your Primary and Secondary Servers are not in the same subnet, do not use a shared IP address. The shared IP address moves between appliances during a failover and recovery and requires both units to reside on the same network."

NEW QUESTION # 17

An administrator wants to build device profiling rules based on network traffic, but the network session view is not populated with any records.

Which two settings can be enabled to gather network session information? (Choose two.)

- A. Firewall session polling on modeled FortiGate devices
- B. Layer 3 polling on the infrastructure devices
- C. Network traffic polling on any modeled infrastructure device
- D. Netflow setting on the FortiNAC-F interfaces

Answer: A,D

Explanation:

In FortiNAC-F, the Network Sessions view provides a real-time and historical log of traffic flows, including source/destination IP addresses, ports, and protocols. This data is essential for building Device Profiling Rules that rely on "Traffic Patterns" or "Network Footprints" to identify devices (e.g., an IP camera communicating with its specific NVR). If the network session view is empty, the system is not receiving the necessary flow or session data from the network infrastructure.

According to the FortiNAC-F Administration Guide, there are two primary methods to populate this view:

NetFlow/sFlow/IPFIX (C): FortiNAC-F can act as a flow collector. By enabling NetFlow settings on the FortiNAC-F service interface (port2/eth1) and configuring your switches or routers to export flow data to the FortiNAC IP, the system can parse these packets and record sessions.

Firewall Session Polling (B): For environments with FortiGate firewalls, FortiNAC-F can proactively poll the FortiGate via the REST API to retrieve its current session table. This is particularly useful as it provides session visibility without requiring the overhead of configuring NetFlow on every access layer switch.

NEW QUESTION # 18

.....

Another outstanding quality is that you can print out the Fortinet NSE5_FNC_AD-7.6 questions. The hard copy will enable you to prepare for the Fortinet NSE5_FNC_AD-7.6 exam questions comfortably. Pass4SureQuiz adds another favor to its users by ensuring them a money-back deal. The unparalleled authority of the Pass4SureQuiz lies in its mission to provide its users with the updated material of the actual Fortinet NSE5_FNC_AD-7.6 Certification Exam.
