HPE7-A07 valid exam cram & HPE7-A07 training pdf torrent & HPE7-A07 actual test dumps

HP HPE7-A07 is one of the important certification exams. ExamcollectionPass's experienced IT experts through their extensive experience and professional IT expertise have come up with IT certification exam study materials to help people pass HP Certification HPE7-A07 Exam successfully. ExamcollectionPass's providing learning materials can not only help you 100% pass the exam, but also provide you a free one-year update service.

HP Aruba Certified Campus Access Mobility Expert Written Exam Sample Questions (Q112-Q117):

NEW QUESTION # 112
A customer is evaluating device profiles on a CX 6300 switch. The test device has the following attributes:
* MAC address = 81:cd:93:13:ab:31
* LLDP sys-desc = iotcontroller
The test device is being assigned to the "lot-dev" role However, the customer requires the "lot-prod" role be applied.

Given the configuration, what is causing the "iot-dev" role to be applied to the device'?

- A. The test device does not support CDP.
- B. The LLDP system description matches the IIdp-group configuration.
- C. The device-profile precedence order is not configured.
- D. An external RADIUS server is unreachable.

Answer: B

Explanation:
In device profile configuration, the device role is often determined by matching attributes such as MAC address, LLDP system description, and CDP information against defined conditions. The test device is being assigned the "iot-dev" role because its LLDP system description matches the 'iot-lldp' group configuration that is associated with the 'iot-dev' role.

NEW QUESTION # 113
A customer wan a gateway connected to a device on gigabitethernet 0/0/3 configures an Asset ID TLV on the device for inventory management.
Exhibit.

The customer mentions me Asset ID is not shown What is causing the issue?

- A. Unknown TLVs cannot be displayed.
- B. LLDP TX is not enabled.
- C. MTU size is too small.
- D. LLPD-MED needs to be enabled.

Answer: A

Explanation:
The issue is that unknown TLVs (Type Length Values) cannot be displayed. LLDP (Link Layer Discovery Protocol) is used to share device information with network neighbors, but if a TLV is not recognized by the LLDP implementation on the gateway, it won't be displayed or processed. Hence, the Asset ID TLV set on the device for inventory management is not showing up because it is unrecognized or unsupported by the gateway's LLDP.

NEW QUESTION # 114
Exhibit.

Which user role will be assigned when a voice client tries to connect for the first time, but the RADIUS server is unavailable?

- A. CRIT1CAL_V0ICE
- B. DEFAULT_AUTH
- C. CRITICAl_AUTH
- D. PRE_AUTH

Answer: A

Explanation:
In the provided configuration for interface 1/1/7, there are roles specified for different scenarios concerning authentication. When a voice client attempts to connect and the RADIUS server is unreachable, the role that is assigned is the one specified as the "critical-voice-role". In this case, the "CRITICAL_VOICE" role is configured to be assigned under such circumstances, ensuring that voice clients receive appropriate network access permissions even when the RADIUS server is not available to authenticate them.

NEW QUESTION # 115
Exhibit.

After configuring VRRP between sw-1 and SW-2. you notice that both switches are showing as active. What could be the reason for this issue?

- A. Both switches are configured as VRRP 'primary.'
- B. SW-1 cam reach SW-2 on VLAN 10.

- C. SW-2 has no priority configurations for VRRP 1.
- D. VRRP preemptive mode is disabled.

Answer: A

Explanation:
In VRRP (Virtual Router Redundancy Protocol), only one switch should be the primary (master) for a given virtual IP address, with the other switches being backups. If both switches are showing as active, it suggests a misconfiguration where both are set to act as the primary for the same VRRP group. The exhibits provided indicate that both switches believe they are the active or primary for the VRRP group, which is an incorrect configuration.

NEW QUESTION # 116
Exhibit.

Which would explain this issue?

- A. captiveportal-login aruba-training com needs to be entered m the Address field for the ClearPass Guest
- B. HTTPS certificate is not required in ClearPass Guest.
- C. ".aruba-training com needs to be entered in the Address field for the ClearPass Guest
- D. HTTPS wildcard certificates are not supported

Answer: C

Explanation:
The correct address for the ClearPass Guest should match the FQDN of the HTTPS certificate installed on the device, which is often the FQDN of the vendor's product. This ensures secure and proper redirection to the captive portal during the authentication process. The FQDN should be entered in the Address field for ClearPass Guest configuration.

NEW QUESTION # 117
......

The passing rate of our HPE7-A07 exam torrent is up to 98 to 100 percent, and this is a striking outcome staged anywhere in the world. They are appreciated with passing rate up to 98 percent among the former customers. So they are in ascendant position in the market. If you choose our HPE7-A07 question materials, you can get success smoothly. Besides, they are effective HPE7-A07 guide tests to fight against difficulties emerged on your way to success.
