CISSP Practice Exam Questions and Answers

Part-2

Domain 5 Identity and Access Management (IAM) (13%)

Q.1. A company has discovered that an employee has been using a colleague's credentials to access sensitive information. What immediate action should the company take to address this issue?

- A** Ignore the issue as it is an internal matter
- B** Terminate both employees involved
- C** Conduct an investigation and enforce strict access control policies
- D** Disable all user accounts temporarily

Answer: C. Conduct an investigation and enforce strict access control policies

Explanation: The first step is to conduct a comprehensive investigation to identify the scope of the issue and assess any potential impacts or unauthorized access.

Q.2. What is the purpose of a Single Sign-On (SSO) system?

- A** To provide multi-factor authentication
- B** To allow users to authenticate once and gain access to multiple systems
- C** To monitor user activity on the network
- D** To encrypt user passwords

I am glad to introduce a secret weapon for all of the candidates to pass the exam as well as get the related certification without any more ado-- our CISSP study materials. You can only get the most useful and efficient study materials with the most affordable price. With our CISSP practice test, you only need to spend 20 to 30 hours in preparation since there are all essence contents in our CISSP Study Materials. What's more, if you need any after service help on our CISSP exam guide, our after service staffs will always offer the most thoughtful service for you.

Study Tips

Below are some helpful study tips you can refer to while preparing for the CISSP test:

- Attend online programs focused on the CISSP and best practices in security to increase your confidence in facing the real exam.
- Take advantage of the most up-to-date security materials and online webinars focused on security operations and software development security.
- Look at the security management prep exam questions to see what valuable knowledge you can collect.
- Get an in-depth & real-life experience that your job and your certification can apply to.
- Seek guidance from security practitioners who have already earned certification for their CISSP skills.

How to earn CISSP Credential?

The candidate must earn 120 continuing education units (CEUs) for the CISSP certification. The CEUs may be earned through participation in the ISSA-certified training course, obtaining CEUs from any other Information Systems Security Association (ISSA) member, obtaining certification credits for passing the exam, or through participating in many other online sites.

Why to trend for ISC CISSP pdf dumps before actual exam

The more you practice with our CISSP simulating exam, the more compelling you may feel. Even if you are lack of time, these CISSP practice materials can speed up your pace of review. Our CISSP guide questions are motivating materials especially suitable for those exam candidates who are eager to pass the exam with efficiency. And we can claim that with our CISSP study braindumps for 20 to 30 hours, you will be bound to pass the exam.

ISC Certified Information Systems Security Professional (CISSP) Sample Questions (Q409-Q414):

NEW QUESTION # 409

Which of the following is a LAN transmission method?

- A. Token ring
- **B. Broadcast**
- C. Fiber Distributed Data Interface (FDDI)
- D. Carrier-sense multiple access with collision detection (CSMA/CD)

Answer: B

Explanation:

LAN transmission methods refer to the way packets are sent on the network and are either unicast, multicast or broadcast. CSMA/CD is a common LAN media access method.

Token ring is a LAN Topology.

LAN transmission protocols are the rules for communicating between computers on a LAN.

Common LAN transmission protocols are: polling and token-passing.

A LAN topology defines the manner in which the network devices are organized to facilitate communications.

Common LAN topologies are: bus, ring, star or meshed.

LAN transmission methods refer to the way packets are sent on the network and are either unicast, multicast or broadcast.

LAN media access methods control the use of a network (physical and data link layers).

They can be Ethernet, ARCnet, Token ring and FDDI.

Ten Domains of Computer Security, John Wiley & Sons, 2001, Chapter 3:

Telecommunications and Network Security (page 103).

HERE IS A NICE OVERVIEW FROM CISCO:

LAN Transmission Methods

LAN data transmissions fall into three classifications: unicast, multicast, and broadcast.

In each type of transmission, a single packet is sent to one or more nodes.

In a unicast transmission, a single packet is sent from the source to a destination on a network. First, the source node addresses the packet by using the address of the destination node. The package is then sent onto the network, and finally, the network passes the packet to its destination.

A multicast transmission consists of a single data packet that is copied and sent to a specific subset of nodes on the network. First, the source node addresses the packet by using a multicast address. The packet is then sent into the network, which makes copies of the packet and sends a copy to each node that is part of the multicast address.

A broadcast transmission consists of a single data packet that is copied and sent to all nodes on the network. In these types of transmissions, the source node addresses the packet by using the broadcast address. The packet is then sent on to the network, which makes copies of the packet and sends a copy to every node on the network.

LAN Topologies

LAN topologies define the manner in which network devices are organized. Four common

LAN topologies exist: bus, ring, star, and tree. These topologies are logical architectures, but the actual devices need not be physically organized in these configurations. Logical bus and ring topologies, for example, are commonly organized physically as a

star. A bus topology is a linear LAN architecture in which transmissions from network stations propagate the length of the medium and are received by all other stations. Of the three most widely used LAN implementations, Ethernet/IEEE 802.3 networks-including

100BaseT-implement a bus topology

NEW QUESTION # 410

When recovering from an outage, what is the Recovery Point Objective (RPO), in terms of data recovery?

- A. The RPO is the maximum amount of time for which loss of data is acceptable.
- B. The RPO is a goal to recover a targeted percentage of data lost.
- C. The RPO is the amount of time it takes to recover an acceptable percentage of data lost.
- D. The RPO is the minimum amount of data that needs to be recovered.

Answer: A

Explanation:

The Recovery Point Objective (RPO) is the maximum amount of time for which loss of data is acceptable in the event of an outage or disaster.

The RPO defines the point in time to which data must be recovered after a disruption, indicating the acceptable level of data loss. It represents the maximum tolerable period during which data may be lost without causing significant impact or harm to the business operations or objectives.

For example, if a company has an RPO of 1 hour, it means that in the event of an outage, the organization can accept a maximum data loss of up to 1 hour's worth of data. The data must be restored or recovered to a state no older than 1 hour before the incident occurred.

NEW QUESTION # 411

What is the MOST common component of a vulnerability management framework?

- A. Threat analysis
- B. Backup management
- C. Patch management
- D. Risk analysis

Answer: C

Explanation:

Patch management is the most common component of a vulnerability management framework. A vulnerability management framework is a set of policies and procedures that aim to identify, assess, and mitigate the vulnerabilities that may affect the organization's information systems and assets. A vulnerability is a weakness or flaw in a system or an application that can be exploited by an attacker to compromise the security or functionality of the system or the application. Patch management is the process of applying patches, which are updates or fixes, to the systems or applications that have vulnerabilities. Patch management can help prevent or reduce the impact of potential attacks that exploit the vulnerabilities, and improve the performance and stability of the systems or applications.

NEW QUESTION # 412

Operations Security seeks to primarily protect against which of the following?

- A. asset threats
- B. compromising emanations
- C. facility disaster
- D. object reuse

Answer: A

Explanation:

The correct answer is asset threats. A threat is any circumstance or event with the potential to cause harm.

The most important reason for identifying threats is to know from what do the assets need protection and what is the likelihood that a threat will occur. Threats cannot be eliminated, but can be anticipated, and safeguards put in place to minimize their impact.

Operations Security provides audit and monitoring for mechanisms, tools and facilities which permit the identification of security events and documentation of subsequent corrective actions.

NEW QUESTION # 413

A development operations team would like to start building new applications delegating the cybersecurity responsibility as much as possible to the service provider. Which of the following environments BEST fits their need?

- A. Self-hosted Virtual Machine (VM)
- B. On premises Virtual Machine (VM)
- C. Cloud Virtual Machines (VM)
- D. Cloud application container within a Virtual Machine (VM)

Answer: D

Explanation:

Section: Mixed questions

NEW QUESTION # 414

.....

Our company has successfully created ourselves famous brands in the past years, and more importantly, all of the CISSP exam braindumps from our company have been authenticated by the international authoritative institutes and cater for the demands of all customers at the same time. We are attested that the quality of the CISSP test prep from our company have won great faith and favor of customers. We persist in keeping close contact with international relative massive enterprise and have broad cooperation in order to create the best helpful and most suitable CISSP study practice question for all customers. We can promise that our company will provide the authoritative study platform for all people who want to prepare for the exam. If you buy the CISSP test prep from our company, we can assure to you that you will have the chance to enjoy the authoritative study platform provided by our company to improve your study efficiency.
