

{Online Realistic} CIPS L4M1 Practice Test Questions

CIPS L4M1 - Question & Answer Past exam questions latest 2023/2023

Q1. Outline FIVE differences between purchasing goods and purchasing services.
Answer - 1. Goods are tangible, services are intangible;
2. Services cannot be separated from their supplier;
3. Heterogeneity; goods are usually uniform in nature while services are unique at each delivery
4. Services 'perish' immediately on delivery whereas goods can be stored until required
5. Products are easier to specify, being tangible

Q2. Explain THREE circumstances in which a competitive tendering exercise might not be the best approach to making a purchase. Answer - 1. Urgency
2. Commercial confidentiality or national security (e.g. military organisations);
3. Value of the purchase;
4. Production costs cannot be measured accurately;
5. Price is not the only criterion for supplier selection and contract award
6. Intellectual Property Rights and monopoly

Q2. Describe TWO e-sourcing tools and their use in procurement and supply.
Answer - 1. E-Catalogues
2. E-Tendering
3. E- Auction
4. Reverse Auctions
5. Online supplier evaluation data

Q3. Explain the role of a shared services unit (SSU). Answer - SSUs reflect a desire to centralise and share services
The shared service provider becomes a dedicated provider of services such as; finance, HR, IT and procurement which continue to be provided internally
An SSU manages costs and quality SLAs to demonstrate value for money.
An SSU's benefits may be summarised as:

- cost effective internal service;
- liaison with its customers;
- anticipating future demand;
- employing resources and providing higher levels of service more cost effectively than if they were provided by a department or an external provider.

Q3. A manufacturer of electrically powered tools for the engineering industry consists of four separate business units, each of which undertakes its own purchasing activities.

As we all know, we are now facing more and more competition. The L4M1 exam is an important way to improve our competitiveness. The certification can show others whether we have a certain skill, whether we meet the requirements of others, for us. Get approved at work to increase your chips. For different needs, our L4M1 Certification Exam questions are flexible and changeable. On the one hand, L4M1 pdf files allow you to make full use of fragmented time, and you will be able to pass the L4M1 exam with the least time and effort with our L4M1 training materials.

CIPS L4M1 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Understand and analyse the added value through procurement and supply chain management: This section of the exam measures skills of supply chain managers related to identifying added value outcomes in procurement and supply and evaluating cost savings, service improvements, and innovationsu contributions. It also measures procurement and supply processes that contribute to added value.

Topic 2	<ul style="list-style-type: none"> Public, private, charity, not-for-profit, manufacturing, retail, construction, financial, agriculture, and service sectors. It also covers analyzing the impact of the public sector on procurement and supply chain activities public sector objectives, regulations, competition, accountability, and value for money. It finally covers the impact of the private sector on procurement or supply chain activities.
Topic 3	<ul style="list-style-type: none"> Understand and analyse aspects of organisational infrastructure that shape the scope of procurement and supply chain functions: This section measures that skill of supply chain strategists and organizational analysts in understanding corporate governance, documented policies, accountability, and ethics. It also covers the impact of organisational policies and procedures on procurement and supply
Topic 4	<ul style="list-style-type: none"> Understand and analyse the need for compliance: This section measures skills of compliance officers and sector-specific procurement managers in understanding different economic and industrial sectors such as
Topic 5	<ul style="list-style-type: none"> Understand and analyse the key steps when procuring goods or services: This section measures that skills of purchasing managers and procurement officers in identifying and evaluating stages in the sourcing process, planning, supplier selection, and contract management.

CIPS Scope and Influence of Procurement and Supply Sample Questions (Q15-Q20):

NEW QUESTION # 15

Industry Sectors can be classified as Primary, Secondary and Tertiary. What is meant by an 'industry sector'? Describe the main characteristics of and types of business you will find in these. (25 marks)

Answer:

Explanation:

See the solution in Explanation part below.

Explanation:

How to approach this question

- The first question can be a simple introduction with a bit of extra detail. The main 'meat' to your essay is going to be explaining the three sectors, their characteristics and example businesses.
- Aim for three well explained characteristics as a minimum

Example essay

An industry sector refers to a broad category or grouping of businesses and economic activities that share similar characteristics and functions in the production and distribution of goods and services. These sectors are often classified into three main categories: Primary, Secondary, and Tertiary. Here are the main characteristics and types of businesses you will find in each of these industry sectors:

1. Primary Sector:

*Characteristics: The primary sector involves activities related to the extraction and production of raw materials and natural resources directly from the environment. This sector relies on nature and weather patterns: businesses in the primary sector are highly dependent on natural factors such as climate, weather, soil quality, and geographic location. These factors can significantly impact the productivity and profitability of primary sector activities. Extreme weather such as floods can severely impact this sector. Moreover there is a seasonality to this sector and many activities in the primary sector require a significant amount of manual labour, particularly in agriculture, fishing, and forestry. However, modern technology has also been integrated into some primary sector activities to increase efficiency.

*Types of Businesses: a. Agriculture: This includes farming, crop cultivation, livestock raising, and forestry. b.

Mining and Extraction. c. Fishing and Aquaculture: Forestry and Logging: Includes the harvesting of timber and related activities.

2.Secondary Sector:

*Characteristic: The secondary sector focuses on the transformation of raw materials and intermediate goods into finished products. The main characteristic of the sector is that it requires high levels of machinery and industrial techniques. There is a reliance on technology. Secondly, the secondary sector adds significant value to the products compared to their raw material form. This value addition is achieved through processing, assembly, and quality control processes. The third main characteristic is standardisation: Manufacturing processes often involve standardization of components and processes to ensure consistency and quality in the final products. Standardization helps in economies of scale.

*Types of Businesses: a. Manufacturing: This sector includes factories and plants that produce tangible goods such as automobiles, electronics, textiles, and machinery. b. Construction: Involves the building and construction of structures like buildings, bridges, and infrastructure. c. Utilities: Companies providing essential services like electricity, gas, and water supply fall into this category.

3.Tertiary Sector:

*Characteristic: The tertiary sector is also known as the service sector and involves businesses that offer various services to consumers and other businesses. The main defining characteristic of this sector is Intangibility: Services are intangible and cannot be touched or held. They are often experienced directly by consumers through interactions with service providers or through the use of technology. Secondly, High Human Involvement: The tertiary sector relies heavily on a skilled and often highly educated workforce to deliver services effectively. This can include professionals such as doctors, lawyers, teachers, and customer service representatives. Lastly, Customization: Many services are customized to meet the specific needs and preferences of individual clients or customers. This personalization is a key characteristic of the tertiary sector.

For example Legal Advice will always be different depending on the specific needs of the client.

*Types of Businesses: a. Retail and Wholesale: Businesses engaged in the sale of goods to consumers or to other businesses. b.

Healthcare and Education: This includes hospitals, clinics, schools, colleges, and universities. c. Financial Services: Banks, insurance companies, and investment firms are part of this sector. d.

Hospitality and Tourism: Hotels, restaurants, travel agencies, and entertainment venues fall into this category.

e. Professional Services: Legal, accounting, consulting, and IT services are part of the tertiary sector.

These industry sectors represent the different stages of economic activity, with the primary sector providing raw materials, the secondary sector processing and manufacturing goods, and the tertiary sector offering services and distribution. Together, these sectors form the backbone of an economy, contributing to its growth and development Tutor Notes

- I've gone overboard on naming the types of organisation in the different sectors. You don't have to remember all of these. 3

examples is sufficient to get good marks. I've just named them all so you can see what could be considered a right answer.

- Some people are talking about Quaternary and Quinary Sectors. CIPS is not one of those people, so don't worry if you come across those terms in any further reading. But FYI

1.

*Quaternary Sector: This sector involves knowledge-based activities, including research and development, information technology, and data analysis.

*Quinary Sector: The quinary sector comprises high-level decision-making and leadership roles in areas such as government, academia, healthcare, and top-level corporate management.

- LO 4.1 p.196

NEW QUESTION # 16

Sarah is thinking of setting up a charity in the UK which will look after animals that have been abandoned.

What regulations and governing bodies should Sarah be aware of when setting up her charity? (25 Points)

Answer:

Explanation:

See the solution in Explanation part below.

Explanation:

How to approach this question

- Your essay should mention at least one regulation and one governing body particular to the charity section and I would recommend these be the Charities Act 2011 and the Charities Commission.

- If you don't know a lot about the sector you can bring up more generalised regulations and governing bodies, such as financial conduct and the Equalities Act, but make sure it's relevant to Sarah. Her charity is a small, local one, so things like Modern Slavery Act will not be appropriate to talk about.

Example Essay

When setting up a charity in the UK, particularly one focused on animal welfare, there are several regulations and governing bodies that Sarah should be aware of. These ensure that the charity operates legally, ethically, and effectively.

A charity's purpose involves raising awareness and helping someone or something, in Sarah's case this will be local animals and potentially their owners. A charity has to satisfy two aspects: The benefit aspect and The public aspect. In the UK, both aspects are regulated by the Charities Act 2011.

To satisfy a benefit aspect, a charity must: have a purpose that must be beneficial to the community it works in

- this must be in a way that is identifiable and capable of being proved by evidence. For Sarah this would be showing that her charity helps animals, potentially by taking them in off the street or removing them from dangerous homes and caring for them.

To satisfy a public aspect, a charity must benefit the public in general, or a sufficient section of the public. In Sarah's case the public benefit may be in removing stray dogs and cats from the streets where they can transport diseases and potentially attack people.

Most charities strive to satisfy both aspects but in some cases this is not possible.

All charities are regulated. Because charities are funded by donations from the public, businesses and sometimes from government, their conduct is regulated closely. Key regulatory bodies that Sarah will have to engage with include:

1. Charity Commission for England and Wales:

As the primary regulator for charities in England and Wales, the Charity Commission oversees the registration and regulation of charities. Sarah's organization must meet the legal definition of a charity and apply for registration if its income is over £5,000 per year.

The Commission ensures compliance with the Charities Act, offering guidance on charity governance, financial management, and reporting.

2. HM Revenue and Customs (HMRC):

Charities can apply to HMRC for recognition as a charity for tax purposes. This status allows for tax reliefs and exemptions, including Gift Aid on donations.

HMRC ensures compliance with tax obligations and scrutinizes the use of charity funds.

3. Data Protection:

Under the General Data Protection Regulation (GDPR) and the Data Protection Act 2018, any charity handling personal data must ensure its protection and comply with data privacy laws.

4. Health and Safety Executive (HSE):

The HSE provides guidelines for workplace safety, which are important if the charity has employees or volunteers.

In conclusion there are many regulations and bodies that Sarah should be aware of when setting up her charity.

Sarah should consider seeking legal advice or consulting with charity advisory services to ensure full compliance with all relevant laws and regulations. Additionally, staying informed about changes in charity law and animal welfare legislation would be beneficial to the smooth operation of her charity.

Tutor Notes

- With case study questions you're not expected to know anything about the specific topic, in this case Animal Charities. If it happens to be something you know about, you can bring in some of your own knowledge, but this isn't a requirement to get a good score. You're not expected to know, for example about the Animal Welfare Act 2006, but if you happen to do so, it could be a nice little thing to add in. Just don't focus your essay on it. However you can make some sensible guesses on what Sarah will be doing, for example I talked about removing stray animals from the street.

- Charities comes up in LO 4.4 p.232

Bottom of Form

Top of Form

NEW QUESTION # 17

What is meant by the term 'centralised procurement'? (10 points) Explain 2 forms of Hybrid Procurement Structures (15 points).

Answer:

Explanation:

See the solution in Explanation part below.

Explanation:

- This is essentially two mini essays, so you can do them completely separately if you like.

1) Definition of centralised procurement - when an organisation has a designated procurement function which makes purchases on behalf of other teams. When departments need to make a purchase, they would do this by approaching the procurement department who would purchase the item they need. This is in contrast to devolved procurement where departments can make purchases themselves.

2) Explanation of 2 forms of hybrid structures- there's a couple in the study guide you can pick from - consortium, shared services, lead buyer and outsourced. In the old syllabus they used to discuss SCAN - Strategically Controlled Action Network and CLAN = Centre Led Action Network. This has been removed from the new syllabus, but I don't think it would be wrong to use SCAN and CLAN in this essay if you wanted to. However they are more complicated than the others and if you can talk about other models instead I'd definitely go for that.

Example Essay:

Centralized procurement refers to a procurement strategy where an organization consolidates its purchasing activities into a single, central department or unit. Instead of allowing individual departments or divisions within the organization to independently manage their procurement processes, centralized procurement involves the concentration of these activities under a unified structure.

Key features of centralized procurement include:

1) Single Procurement Authority: In a centralized procurement system, there is a designated procurement authority or department responsible for handling all purchasing decisions. This central entity has the authority to negotiate contracts, select suppliers, and make procurement-related decisions on behalf of the entire organization.

2) Streamlined Processes: Centralized procurement aims to standardize and streamline procurement processes across the organization. This can include the establishment of uniform procurement policies, procedures, and documentation to ensure consistency and efficiency.

3) Economies of Scale: By consolidating purchasing power, centralized procurement allows organizations to leverage economies of scale. Bulk purchases, standardized contracts, and negotiations with suppliers on a larger scale can lead to cost savings and more favourable terms.

4) Improved Coordination and Communication: Centralized procurement enhances coordination and communication within the organization. With a centralized structure, there is better visibility into overall procurement activities, allowing for improved collaboration, information sharing, and strategic planning.

Moreover, this centralized control helps manage risks, ensure transparency, and monitor adherence to ethical and legal standards.

5) Consolidated Supplier Relationships: Centralized procurement enables the organization to consolidate its relationships with suppliers. This can lead to stronger partnerships, better negotiation positions, and improved collaboration with a select group of suppliers that meet the organization's needs.

6) Strategic Decision-Making: Centralized procurement allows organizations to make strategic decisions at a higher level. This includes aligning procurement strategies with overall organizational goals, optimizing the supply chain, and contributing to broader business objectives.

An example of centralised procurement would be in a hotel chain with several hotels across the UK. In a centralised procurement function there would be one team responsible for ordering everything for all of the hotels, rather than allowing the individual hotels to buy things themselves. Premier Inn is an example of a company that uses this structure- it allows them to buy stock in bulk and ensures that all hotels have the same equipment so customers expectations are always met.

Centralized procurement is often contrasted with decentralized procurement, where individual departments or business units manage their procurement independently (i.e. each hotel would buy their own supplies). The choice between centralized and decentralized procurement depends on various factors, including the size and structure of the organization, the nature of its operations, and the specific goals it aims to achieve through its procurement processes.

Consortium Procurement Model:

The consortium procurement model is characterized by the collaboration of multiple organizations forming a joint group (the consortium) to engage in collective buying activities. Typically composed of entities from the same industry or sector, these organizations unite their resources, expertise, and purchasing power to pursue shared procurement objectives. The consortium leverages this collective strength to negotiate contracts, conduct bulk purchases, and benefit from economies of scale, resulting in cost savings and increased operational efficiency. The UK University sector is an example of Consortium activities- many universities come together to 'group buy' items as this brings about many benefits.

The main benefit of this form of hybrid procurement model is the increased negotiating power and leverage derived from combining the purchasing volumes of participating entities. This often results in more favourable terms, competitive prices (through bulk purchases), and improved conditions with suppliers. Additionally, consortium buying allows organizations to share resources, knowledge, and expertise, fostering a collaborative environment that enhances overall procurement capabilities. By working together, consortium members can collectively address challenges, negotiate strategically, and navigate the procurement landscape more effectively.

However, consortium buying is not without its challenges. A potential disadvantage lies in the complexity of managing a collaborative procurement structure, involving coordination among diverse entities. Achieving consensus on procurement strategies, vendor selection, and contract terms may require considerable effort and compromise. Additionally, individual organizational needs and preferences within the consortium may differ, posing challenges in aligning priorities. It is essential to strike a balance between centralized decision-making and accommodating the specific requirements of each consortium member. Furthermore, the success of consortium buying relies heavily on effective communication and trust among participants. Any breakdown in communication or lack of trust could hinder the collaborative process, impacting the overall efficiency and success of the consortium's procurement endeavours.

Overall, while consortium buying offers notable advantages, its effectiveness is contingent on careful management of collaborative dynamics and effective communication strategies.

Shared Services Procurement Model:

In the shared services procurement model, various departments or business units within a single organization converge under a centralized procurement function. Rather than individual units managing their procurement independently, a dedicated shared services centre is established to provide procurement-related services across the organization. This model facilitates streamlined processes, ensures consistency through standardized procedures, and capitalizes on economies of scale.

One key benefit is the potential for cost savings through economies of scale. By centralizing procurement, the organization can negotiate bulk purchases and standardized contracts, leading to better terms and prices. This consolidation of purchasing power enables the organization to optimize its resources and achieve overall cost efficiency. Additionally, centralized procurement allows for streamlined processes, standardized procedures, and better control over procurement activities. It promotes consistency, reduces redundancy, and ensures adherence to organizational policies and compliance requirements.

However, there are also potential disadvantages to centralized procurement. One notable challenge is the potential for reduced

flexibility in meeting the unique needs of individual departments or business units within the organization. Centralization may lead to standardized approaches that might not be well-suited for all units, potentially impacting their specific requirements. Furthermore, the centralization of decision-making can result in increased bureaucracy and longer decision-making processes, potentially slowing down procurement activities. Additionally, there may be resistance from decentralized units that are accustomed to managing their procurement independently. Striking a balance between centralized control and accommodating the diverse needs of various units is crucial for the success of centralized procurement.

In conclusion, both the consortium and shared services procurement models represent strategies to enhance efficiency, realize cost savings, and optimize procurement processes. While the consortium model involves collaboration with external entities, the shared services model centralizes procurement functions within a single organization. The choice between these models depends on the unique goals, structure, and requirements of the organizations involved, each offering distinct advantages in the pursuit of effective procurement management.

Tutor Notes:

- This is from LO 3.3 p.161 onwards. There's quite a bit of information on these hybrid models so there's many ways it can come up as a question. There are different types of consortium, which I didn't go into in the above essay because it wasn't asked for as part of the question, but I'd familiarise yourself with this. Also with the pros and cons of each model, and think about when an organisation may choose this type of model.

NEW QUESTION # 18

Bob is a procurement manager at ABC Ltd. He has been asked to ensure all future purchases achieve 'value for money' for the organisation. What is meant by 'value for money'? (5 points). Describe 4 techniques that Bob could use to achieve this (20 points)

Answer:

Explanation:

See the solution in Explanation part below.

Explanation:

1) A definition of Value for Money: ensuring a purchase is cost effective. This may be that the purchase achieves the 5 Rights of Procurement or that the purchase achieves the 4Es: Economy, Efficiency, Effectiveness and Equity. - this is only worth 5 points, so don't spend too long on this

2) 4 techniques Bob can use to achieve VFM: this is the bulk of your essay. Each of the 4 will be worth 5 points, so remember to give a thorough explanation and example. Pick 4 from the list below: complete a value analysis to eliminate non-essential features, minimise variety/ consolidate demand, avoid over specification, pro-active sourcing, whole life costing methodologies, eliminate / reduce inventory, use electronic systems, international sourcing, sustainability / environmental policies, currency/ exchange rate considerations, negotiating good payment terms, packaging, warranties.

Example Essay:

"Value for money" (VFM) is a concept that refers to obtaining the best possible return on investment or benefits relative to the cost incurred. It involves assessing whether the goods, services, or activities provided offer an optimal balance between their cost and the quality, benefits, or outcomes they deliver.

Value for money is not solely about choosing the cheapest option; instead, it considers the overall efficiency, effectiveness, and long-term value derived from an expenditure. For Bob, the Procurement Manager at ABC Ltd there are four key ways that he can achieve this for all future purchases.

Value Engineering

This is looking at the components of a product and evaluating the value of each component individually.

You can then eliminate any components that do not add value to the end product. To do this Bob would choose a product to review and determine whether any parts of this can be omitted (thus saving the company money) or could be replaced by components that are of a higher quality at the same price (thus providing added value to the customer). For example, Bob could complete a Value Engineering exercise on the new mobile phone prototype ABC plan to release next year. His findings may discover a way to provide a higher quality camera at no additional cost or that some components don't add value and can be eliminated.

Consolidate demand

Bob can achieve value for money by consolidating demand at ABC Ltd. This would mean rather than each individual person/ department ordering what they want when they need it, Bob creates a centralised process for ordering items in bulk for the departments to share. For example, if each department requires stationary to be ordered, Bob can consolidate this demand and create one big order each quarter. This will likely result in cost savings for ABC as suppliers often offer discounts for large orders. Moreover, consolidating demand will allow for saving in time (one person does the task once, rather than lots of people doing the same task and duplicating work).

International sourcing

Bob may find there is value for money in changing suppliers and looking at international sourcing.

Often other countries outside of the UK can offer the same products at a lower cost. An example of this is manufactured goods from China. By looking at international supply chains, Bob may be able to make cost-savings for ABC. He should be sure that when using

this technique there is no compromise on quality.

Whole Life Costing methodology

This is a technique Bob can use for procuring capital expenditure items for ABC. This involves looking at the costs of the item throughout its lifecycle and not just the initial purchase price. For example, if Bob needs to buy a new delivery truck he should consider not only the price of the truck, but also the costs of insurance for the truck, how expensive it is to buy replacement parts such as tyres and the cost of disposing of the truck once it reaches the end of its life. By considering these factors Bob will ensure that he buys the truck that represents the best value for money long term.

In conclusion Bob should ensure he uses these four techniques for all items he and his team procures in the future. This will ensure ABC Ltd are always achieving value for money, and thus remain competitive in the marketplace.

Tutor Notes

- This case study is really short, and the ones you'll receive in the exam are often longer and give you more guidance on what they're expecting you to write. With case study questions, you have to make your entire answer about Bob. So don't bring in examples from your own experience, rather, focus on giving examples for Bob.

- A good rule of thumb for case study questions is make sure you reference the case study once per paragraph.

- Value for Money is a really broad topic and you can pretty much argue anything that procurement does is helping to achieve value for money. There's a large table of stuff that's considered VFM on p.38 but that table isn't exhaustive. So feel free to come up with your own ideas for this type of essay.

Some additional tidbits of information on VFM:

- The 'academic' definition of Value for Money is 'the optimum combination of whole life cost and the quality necessary to meet the customer's requirement'

- Value for Money is an important strategic objective for most organisations but particularly in the public sector. This is because the public sector is financed by public money (taxes), so they must demonstrate that the organisation is using this money wisely. This might be an interesting fact to put into an essay on VFM.

- Value can often be hard to quantify, particularly in the service industry. E.g. in customer service it can be difficult to quantify the value of having knowledgeable and polite employees delivering the service.

NEW QUESTION # 19

Describe what is meant by the 5 Rights of Procurement (25 points)

Answer:

Explanation:

See the solution in Explanation part below.

Explanation:

How to approach the question

- This question is worth 25 marks so you can imagine what the mark scheme will look like. There are 5 Rights so there will be 5 points for each Right. Naming the Right will be one point, then you have 4 points for a description and example. You should therefore aim to have 4-5 sentences per Right.

- I would recommend using headings for this type of essay- clearly putting your essay into 5 sections for each right. This makes it easy for the examiner to mark.

Proposed Essay structure

- Introduction - what is meant by the 5 Rights

- Price

- Quality

- Quantity

- Time

- Place

- Conclusion - why it's important, all rights are equally as important

Example Essay

Procurement revolves around achieving the delicate balance of acquiring goods and/ or services at the right price, quality, quantity, time, and place. This essay explains why these "Five Rights of Procurement" are important and explains how using this metric can help procurement to make smart choices when they purchase goods or services.

Price:

Firstly, it is important that procurement do not simply seek to find the cheapest option. The First Right is about finding the product/ service at an affordable price that doesn't compromise on quality. Let's say a company is buying office furniture. They might go for a supplier that offers a good balance between cost and quality, ensuring they get good value for their money. Considerations here may include Total Cost of Ownership, the Price Iceberg, and Whole Life Costing. The company therefore may seek to get the best price, but in relation to how long the furniture will last. A cheap chair that will break after one year may not be the best price compared to another chair which will last 10 years.

Quality:

The second right, quality, looks at legal compliance and fitness for purpose. Quality adherence aligns with specifications as well as legislation such as the UK Sale of Goods Act 1979. This helps ensure that items meet their commonly intended purpose and maintains satisfactory condition. Buyers deploy both reactive measures like Quality Control and proactive approaches like Quality Assurance to uphold the stipulated quality. This commitment not only ensures legal compliance but also underpins customer satisfaction, brand reputation, and ethical sourcing policies. An example of quality is an organisation buying a washing machine that conforms to ISO standard 97.060 and has a 2-year warrantee.

Quantity:

The third right, quantity, is a strategic consideration about how much of an item to order. It is connected to efficient inventory management. One tool that procurement can use to ensure they order the right quantity of a product is Economic Order Quantity (EOQ) - this serves as a tool for finding the equilibrium between stock-holding costs and avoiding stockouts. Market conditions, supply chain dynamics (e.g. JIT / Lean manufacturing), and organizational policies collectively play a pivotal role in determining the right quantity. For example a confectionary manufacturer will need to order the right number of eggs to make cakes- they will need to consider how many eggs they will need in order to make the cakes, but also take into consideration that they may not need them all at once and that eggs can expire. The use of an MRP system is helpful when determining quantities of products to order.

Time:

Time is about getting things when we need them. In the above example, an egg delivery timing for a confectionary manufacturer will be pivotal to making the cakes on time. Other considerations about time include changing market forces and customer demand. The use of forecasting is therefore extremely useful; particularly if there are peaks in demand for a product, such as toys at Christmas. Moreover, organizations need to avoid bottlenecks and production stoppages, so time (including lead time and delivery time) is an important consideration when making orders.

Place:

Lastly, place is about getting things to the right location. Minimizing environmental impact, reducing risks during transit, and optimizing warehousing practices contribute to achieving the right place. This is particularly important for perishable items such as food, and for items which require specific storage conditions such as chemicals. This involves good planning in terms of logistics, minimizing any impact on the environment during transport and a consideration for safety.

In conclusion, the Five Rights of Procurement provide a structured framework for organizations to optimize their sourcing practices. All rights are equally as important and it is the relationship between the Rights which is key. While price, quality, quantity, time, and place form the foundation, evolving models acknowledge additional elements like the Right Relationship with the Supplier. Embracing these principles not only ensures operational efficiency but also promotes sustainability and ethical conduct throughout the procurement process, contributing to long-term success in a globalized and dynamic marketplace.

Tutor Notes

- The 5 Rights is a big topic in CIPS so do learn them off by heart. It's p. 20 in the study guide.
- The conclusion mentions that additional 'rights' are starting to be introduced into the matrix, this is true and isn't mentioned in this study guide. I believe this starts to come up in Level 5. Just something to be aware of- some people are now talking about other Rights such as finding the right supplier and the right relationship. It's good to know, but not essential for this essay. Neither is knowing the ISO standard for washing machines - that's certainly not in the book. You can sprinkle in your own knowledge to essays like this, as it demonstrates you're able to apply the theory to real life. Why I remember the ISO for washing machines is a different story....
- You could also have mentioned the following topics;
 - o price - using the right currency and incoterm, aggregation of spend, negotiating prices o quality - conformance and performance
 - specs o quantity - fulfilling retail orders, large order quantities leading to discount o time - additional costs of a stockout, impact on relationships and reputation o place - additional costs if delivery fails
- This is the type of question you can easily over-write. It's a huge topic and you could easily spend too long on it and not have enough time to answer other questions. So be careful with your timings. You don't need to mention everything above.
- Another way this type of question can come up is as a scenario. E.g. XYZ is a manufacturer of cakes and needs to order eggs. Discuss how XYZ can ensure the 5 Rights of Procurement when ordering Eggs.

NEW QUESTION # 20
