Hot Salesforce Mule-Dev-202 Latest Torrent & Trustable Actualtests4sure - Leading Offer in Qualification Exams

Are you an exam jittering? Are you like a cat on hot bricks before your driving test? Do you have put a test anxiety disorder? If your answer is yes, we think that it is high time for you to use our Mule-Dev-202 exam question. Our Mule-Dev-202 study materials have confidence to help you Pass Mule-Dev-202 Exam successfully and get related certification that you long for. The Mule-Dev-202 guide torrent from our company must be a good choice for you, and then we will help you understand our Mule-Dev-202 test questions in detail.

Salesforce Certified MuleSoft Hyperautomation Developer Sample Questions (Q26-Q31):

NEW OUESTION #26

Northern Trail Outfitters needs to develop an application network that follows a MuleSoft-recommended, API- led connectivity approach and meets the following requirements:

provides data to mobile and web interfaces

aggregates and transforms data

retrieves data from databases

In which API tier should the data aggregation and transformation take place?

A. System

- B. Experience
- C. Business
- D. Process

Answer: D

Explanation:

API-led Connectivity:MuleSoft's API-led connectivity approach divides APIs into three tiers: System, Process, and Experience. Each tier has a specific role in managing data and operations.

Reference: MuleSoft API-led Connectivity

Experience APIs: These APIs are designed to provide data to end-user interfaces, such as mobile and web applications. They typically format the data in a way that is easy for the user interface to consume.

Reference: Experience API Definition

Process APIs:Process APIs are responsible for orchestrating and executing business logic. They aggregate, transform, and process data from multiple sources before passing it to Experience APIs or other downstream systems.

Reference:Process API Role

System APIs: These APIs provide direct access to core systems and data sources. They handle CRUD (Create, Read, Update, Delete) operations and expose data from underlying systems.

Reference:System API Role

Data Aggregation and Transformation: Given the requirements to aggregate and transform data, the Process tier is the appropriate place. Process APIs handle complex business logic and data transformation, making them ideal for aggregating data from multiple sources and transforming it as needed.

Reference:Process APIs and Data Transformation

NEW QUESTION #27

Northern Trail Outfitters publishes REST APIs to Anypoint Exchange. They write the REST APIs using RAML and share these APIs with internal and external users.

In which language or languages can a user download these APIs?

- A. RAML, OAS, and Apiary
- B. RAML and Apiary only
- C. RAML only
- D. RAML and OAS only

Answer: D

Explanation:

Users can download REST APIs published to Anypoint Exchange in the following languages:

RAML (RESTful API Modeling Language):

RAML is a modeling language for defining APIs, used by MuleSoft for creating REST APIs.

OAS (OpenAPI Specification):

OAS, also known as Swagger, is another widely-used standard for defining APIs.

MuleSoft supports both RAML and OAS formats, allowing users to choose between these two standards when downloading API definitions.

References:

Anypoint Exchange API Documentation

MuleSoft RAML and OAS Documentation

NEW QUESTION #28

Northern Trail Outfitters is developing an API that connects to a vendor's database.

Which two strategies should their Ops team use to monitor the overall health of the API and database using API Functional Monitoring? (Choose two.)

- A. Make a call to a health-heck endpoint, and then verity that the endpoint is still running.
- B. Monitor the Mule worker logs for "ERROR" statements and verity that the results match expected errors.
- C. Monitor the CloudHub worker logs for JDBC database connection exceptions.
- D. Make a GET call to an existing API endpoint, and then verify that the results match expected data.

Answer: A,D

Explanation:

Health-Check Endpoint: Creating and regularly calling a health-check endpoint is a common strategy to ensure that the API and its underlying systems are operational. This endpoint typically performs basic checks such as database connectivity and service availability.

Reference:Health Check Pattern

GET Call to Existing Endpoint: Making a GET call to an existing API endpoint and verifying that the results match expected data helps ensure that the API is not only running but also functioning correctly. This approach validates that the API can retrieve data from the database as intended.

Reference: API Monitoring Best Practices

Monitoring CloudHub Worker Logs: While monitoring logs can be useful, it is more of a reactive approach.

Proactive strategies like health-check endpoints and GET calls provide immediate validation of the API's operational status.

Reference:CloudHub Monitoring

Verifying Mule Worker Logs for Errors: This approach can complement health-check endpoints and GET calls but should not be the primary strategy. Logs are helpful for diagnosing issues after they occur rather than ensuring ongoing health.

Reference: Error Handling and Logging

NEW QUESTION #29

AnyAirlines has an RPA process that is failing in Production.

According to best practices, how should they debug the failure?

- A. Download the analysis package from RPA Manager. revert the RPA process to the Test phase, then import the analysis package to RPA Builder and debug.
- B. Download the analysis package from RPA Manager, open it in a text editor, then determine the root cause.
- C. Deactivate the RPA process, enter the inputs manually, the monitor the execution to determine the root cause.
- D. Download theanalysis package from RPA Manager. revert the RPA process to the Build phase, then import the analysis package to RPA Builder and debug.

Answer: D

Explanation:

Download the Analysis Package: The first step is to download the analysis package from the RPA Manager.

This package contains logs and detailed execution data that are crucial for debugging.

Reference: MuleSoft RPA Manager Documentation

Revert to Build Phase:Reverting the RPA process to the Build phase allows developers to make changes and debug the process. The Build phase is where the RPA process is designed and configured.

Reference: MuleSoft RPA Lifecycle

Import to RPA Builder:Import the analysis package into RPA Builder, which is the tool used to develop and debug RPA processes. This allows for a detailed investigation and identification of the root cause of the failure.

Reference: MuleSoft RPA Builder Guide

Debugging:Use the detailed logs and execution data within RPA Builder to step through the process, identify issues, and implement fixes. This is the most effective method for diagnosing and resolving issues in RPA processes.

Reference: RPA Debugging Techniques

NEW QUESTION #30

Northern Trail Outfitters has deployed a MuleSoft RPA process to automate the extraction of sales data from CSV files. To integrate this RPA process with Sales Cloud, an action step is created that calls this RPA process in a MuleSoft Composer flow. Which next step must be added to the flow to make use of the RPA process results?

- A. Create or Update Record action in Sales Cloud
- B. For Each loop
- C. If/Else block
- D. Create Record action in Sales Cloud

Answer: A

Explanation:

To integrate an RPA process that extracts sales data from CSV files with Sales Cloud using MuleSoft Composer, you need to take the following steps:

Invoke RPA Process:

Create an action step in the MuleSoft Composer flow that calls the RPA process to extract the sales data from the CSV files. Next Step - Create or Update Record:

After the RPA process completes and returns the extracted data, the next step in the flow should be to update Sales Cloud with the new information.

Use the Create or Update Recordaction to insert the new sales data into Sales Cloud. This action ensures that existing records are updated if they already exist, or new records are created if they don't.

This approach ensures that the results from the RPA process are correctly reflected in Sales Cloud.
