

# NS0-185 Related Exams & NS0-185 Latest Exam

We provide online customer service on the NS0-185 practice questions to the customers for 24 hours per day and we provide professional personnel to assist the client in the long distance online. If you have any questions and doubts about the NS0-185 guide torrent we provide before or after the sale, you can contact us and we will send the customer service and the professional personnel to help you solve your issue about using NS0-185 Exam Materials. The client can contact us by sending mails or contact us online. We will solve your problem on NS0-185 exam questions until you pass the exam.

Preparing for the Network Appliance NS0-185 certification exam can be time-consuming and expensive. That's why we guarantee that our customers will pass the NetApp Storage Installation Engineer, ONTAP Professional Exam (NS0-185) exam on the first attempt by using our product. By providing this guarantee, we save our customers both time and money, making our NS0-185 Practice material a wise investment in their career development.

## NS0-185 Quiz Torrent: NetApp Storage Installation Engineer, ONTAP Professional Exam - NS0-185 Exam Guide & NS0-185 Test Bootcamp

As we all know, in the highly competitive world, we have no choice but improve our soft power (such as NS0-185 certification). You may be in a condition of changing a job, but having your own career is unbelievably hard. Then how to improve yourself and switch the impossible mission into possible is your priority. Here come our NS0-185 Guide torrents giving you a helping hand. It is of great significance to have NS0-185 question torrent to pass exams as well as highlight your resume, thus helping you achieve success in your workplace.

## Network Appliance NetApp Storage Installation Engineer, ONTAP Professional Exam Sample Questions (Q93-Q98):

### NEW QUESTION # 93

Which tool is used to compare or check the dependencies of individual software and hardware components?

- A. Net2
- B. FMC\_DC

- C. Interoperability Matrix Tool (IMT)
- D. Solution Builder

**Answer: C**

#### NEW QUESTION # 94

You are a NetApp Professional Services engineer. You have completed an ONTAP cluster installation and need to collect configuration information to enable creation of a Service Event Report (SER).

Which tool would you use?

- A. Active IQ Config Advisor worksheet
- B. Active IQ scheduled reports
- C. ONTAP System Manager
- D. NetAppDocs output report

**Answer: D**

Explanation:

Service Event Reports require standardized installation and configuration data. NetAppDocsgenerates structured output reports specifically designed for SER creation, including hardware, cabling, and configuration details. Other tools do not produce SER-formatted documentation.

#### NEW QUESTION # 95

What are two functions of the four Ethernet switches in the supported configuration shown in the exhibit?  
(Choose two.)

- A. to enable SyncMirror replication
- B. to install cross-site cluster management switches
- C. to provide a direct connection for SnapMirror Synchronous
- D. to provide connectivity for NVRAM over iWARP

**Answer: A,D**

Explanation:

The exhibit represents aMetroCluster IPconfiguration, which uses Ethernet switches to provide redundant connectivity between sites. In this architecture, the Ethernet switches are responsible for transportingNVRAM replication traffic using iWARP (RDMA over TCP/IP). This enables synchronous replication of write logs between HA partners across sites.

Additionally, the switches supportSyncMirror replication, which maintains mirrored aggregates across sites to provide continuous data availability in the event of a site failure.

SnapMirror Synchronous and cluster management traffic do not use these switches directly in this configuration. Therefore, the correct answers areC and D.

#### NEW QUESTION # 96

You have a 2-node switchless cluster named clusterA. You are planning on adding two additional nodes to clusterA. What must you consider before you add the additional nodes to clusterA?

- A. Convert clusterA to a switched cluster by migrating the data LIFs from direct connect to the cluster interconnect switch.
- B. Use direct connect to add the additional nodes to clusterA.
- C. Convert clusterA to a single-node cluster.
- D. Convert clusterA to a switched cluster by migrating the cluster LIFs from direct connect to the cluster interconnect switch.

**Answer: D**

Explanation:

A 2-node switchless cluster is limited to two nodes and uses direct connections for cluster LIFs. Before adding additional nodes, ONTAP requires converting the environment into aswitched cluster.

This conversion involves installing cluster interconnect switches andmigrating the cluster LIFsfrom direct connections to the new cluster interconnect switches. Data LIFs are not involved in cluster communication and do not need migration for cluster expansion.

Direct connect cannot support more than two nodes, and converting to a single-node cluster is invalid. Therefore, the correct answer is C.

### NEW QUESTION # 97

To ensure that your customer's cluster is robust and operational, you need to be familiar with configuration best practices. Which three practice rules should you always follow? (Choose three.)

- A. Remove failed disk drives once a year to maintain minimum interruption in controller stability.
- B. All power supply units should be plugged into the same power grid.
- C. **Keep all nodes in the cluster on the same version of ONTAP.**
- D. **Do not use the root aggregate for storing data.**
- E. **Use LIFs with defined failover policies.**

**Answer: C,D,E**

Explanation:

ONTAP SAN solution assessment requires adherence to proven configuration best practices to ensure availability, resiliency, and supportability.

First, all nodes must run the same ONTAP version. Mixed-version clusters are only permitted temporarily during upgrades. Running different versions long-term can cause compatibility issues and is not supported as a steady-state configuration.

Second, LIFs must have defined failover policies. Proper LIF failover ensures that network access is maintained during port, node, or network failures. This is a foundational availability principle in ONTAP networking design.

Third, the root aggregate must never be used for data storage. The root aggregate is reserved exclusively for system metadata and cluster operations. Storing user data on the root aggregate can compromise system stability and is explicitly prohibited in NetApp best practices.

Removing failed disks annually is incorrect; failed disks must be replaced immediately. Plugging all power supplies into the same power grid eliminates redundancy and violates high-availability design principles.

Therefore, the correct answers are A, B, and E.

### NEW QUESTION # 98

.....

Once downloaded from the website, you can easily study from the NetApp Storage Installation Engineer, ONTAP Professional Exam exam questions compiled by our highly experienced professionals as directed by the Network Appliance NS0-185 exam syllabus. The Network Appliance NS0-185 Dumps are given regular update checks in case of any update. We make sure that candidates are not preparing for the NetApp Storage Installation Engineer, ONTAP Professional Exam exam from outdated and unreliable NS0-185 study material.

**NS0-185 Latest Exam:** [https://www.dumpleader.com/NS0-185\\_exam.html](https://www.dumpleader.com/NS0-185_exam.html)

Superior quality, All the NS0-185 study materials of our company are designed by the experts and professors in the field, Network Appliance NS0-185 Related Exams Additionally, our excellent after sales service contains one-year free update service and the guarantee of dump cost full refund if you fail the exam with our dump, Our NS0-185 prep torrent will provide customers with three versions: PDF, soft and APP versions, each of them has its own advantages.

Have you dreamed of there being the best service for you, Using AngularJS with MongoDB, Superior quality, All the NS0-185 Study Materials of our company are designed by the experts and professors in the field.
