New Study PDII-JPN Questions | VCE PDII-JPN Dumps

With the intense competition in labor market, it has become a trend that a lot of people, including many students, workers and so on, are trying their best to get a PDII-JPN certification in a short time. They all long to own the useful certification that they can have an opportunity to change their present state, including get a better job, have a higher salary, and get a higher station in life and so on, but they also understand that it is not easy for them to get a PDII-JPN Certification in a short time. If you are the one of the people who wants to get a certificate, we are willing to help you solve your problem.

Salesforce Sample Questions (Q53-Q58):

NEW QUESTION # 53

開発者は、商談がクローズされるたびに商談のアカウントのカスタム最終販売日フィールドを更新するトリガーを商談に作成しました。トリガーのテストクラスで、最終販売日フィールドを検証するアサーションが失敗します。

アサーションが失敗する原因は何でしょうか？

- A. テストクラスはテストメソッドに `seealldata=true` を実装していません。
- B. テストデータを挿入するときに、テストクラスでアカウント所有者が定義されていません。
- C. テストクラスは `System` を使用していません。 `run()` は、Salesforce 管理者としてテストを実行します。
- D. テストクラスは、商談の更新後に取引先レコードを再クエリしていません。

Answer: D

Explanation:

The most likely cause of the failed assertion is that the test class has not re-queried the Account record after updating the Opportunity. This means that the test class is still using the old value of the Last Sold Date field, which does not reflect the change made by the trigger. To fix this, the test class should query the Account record again after updating the Opportunity and before asserting the Last Sold Date field. The test class does not need to define an Account owner when inserting the test data, because the owner will be automatically assigned to the running user. The test class does not need to implement `seealldata=true` in the test method, because this annotation allows the test class to access the org's data, which is not relevant for this scenario. The test class does not need to use `System.runAs()` to run tests as a Salesforce administrator, because this method is used to test the behavior of the code under different user profiles and permissions, which is not the focus of this test case. NEW QUESTION # 54

開発者は、カスタム画面用に Visualforce コンポーネントを作成するか Lightning コンポーネントを作成するかを決定しようとしています。

最終的な決定に影響を与える機能の考慮事項はどれですか？

- A. 画面はモバイルアプリ経由でアクセスされますか？
- B. サードパーティのアプリケーションを使用せずに、画面を PDF としてレンダリングする必要がありますか？
- C. 画面は Lightning Experience UI からアクセスできる必要がありますか？
- D. 画面は JavaScript フレームワークを使用しますか？

Answer: B

Explanation:

Visualforce has a built-in feature to render a page as a PDF by using the `renderAs` attribute. This feature allows the developer to create PDF documents from Visualforce pages without using any third-party applications or libraries. Lightning components do not have this feature, and would require the use of external services or libraries to generate PDF documents from the component. Therefore, if the screen needs to be rendered as a PDF without using a third-party application, the developer should choose Visualforce over Lightning. Reference: [Rendering a Page as a PDF], [Creating PDFs with Lightning Components]

NEW QUESTION # 55

開発者は、サンドボックスで Acme アカウントのすべてのアカウントフィールドを照会するために何を使用する必要がありますか？

- A. `SELECT * FROM ACCOUNT WHERE Name = 'Acme' LIMIT 1`
- B. `SELECT FIELDS (ALL) FROM Account WHERE Name = 'Acme' LIMIT 1`
- C. `SELECT ALL FROM Account WHERE Name = 'Acme' LIMIT 1`
- D. `SELECT FIELDS FROM Account WHERE Name = 'Acme' LIMIT 1`

Answer: B

NEW QUESTION # 56

次のコード スニペットを検討してください。

HTML

```
<apex:page docType="html-5.0" controller="FindOpportunities">
<apex:form>
<apex:pageBlock>
<apex:pageBlockSection title="find opportunity">
<apex:input label="opportunity name"/>
<apex:commandButton value="search" action="{!search}"/>
</apex:pageBlockSection>
<apex:pageBlockSection title="Opportunity List" id="opportunityList">
</apex:pageBlockSection>
</apex:pageBlock>
</apex:form>
</apex:page>
```

この Visualforce ページのユーザーから、「検索」ボタンが押されるたびにページが完全に更新されてしまうという苦情が寄せられています。開発者は、`opportunityList` で識別されるセクションのみが画面に再描画されるように、部分的な更新を確実に行うにはどうすればよいでしょうか? 1415

- A. `DATI6A` テーブルを `<apex:actionRegion>` タグで囲みます。1718
- B. `<apex:commandButton>` タグに `reRender` 属性を実装します。
- C. `immediate = true` で `<apex:actionFunction>` タグを実装します。
- D. アクションメソッドの検索が `null` を返すことを確認します。19

Answer: B

Explanation:

In Visualforce, the standard behavior for an `<apex:commandButton>` is to perform a full page postback. To convert this into an asynchronous (AJAX) request that only updates a specific portion of the page, the developer must use the `reRender` attribute (D). By setting `reRender="opportunityList"` on the command button, the developer instructs the platform to capture the server's response and update only the DOM element with that specific ID, rather than refreshing the entire browser window.

While Option C (returning null from the search method) is a requirement for staying on the same page, it does not prevent the full refresh by itself. Option A (`<apex:actionRegion>`) is used to limit which part of the form's data is sent to the server for processing (to avoid validation errors on unrelated fields), but it does not control which part of the page is re-drawn on the client. Option B (`<apex:actionFunction>`) is a way to call Apex from JavaScript but doesn't solve the button's refresh behavior directly. Implementing `reRender` is the standard and most efficient way to achieve the "partial refresh" UX in Visualforce, significantly improving the perceived performance and user experience by reducing the amount of data and UI flickering during search operations.

NEW QUESTION # 57

Visualforce ページのビュー ステートの最大サイズは _____ です。

- A. 256kb
- B. 65kb
- C. 165kb
- D. 135kb
- E. 1MB

Answer: D

NEW QUESTION # 58

.....

Simple and easy-to-understand words are used in the content of our PDII-JPN exam questions. It is one of the unique benefits of PDII-JPN exam material that is not common in other PDII-JPN. PassTorrent designed this PDII-JPN exam material to work in different systems.
