問題 #70

Which of the following statements is false about Huawei CloudEngine S6750-S series switches?

- A. GE electrical or 10GE/25GE optical downlink ports, 25GE/100GE optical uplink ports, and on-demand selection of various ports
- B. Telemetry-based data collection within seconds, and visualized and intelligent O&M
- C. MACsec supported on all ports
- D. Network slicing and VXLAN, one network for multiple services, and secure service isolation
- E. Native WAC feature

答案: C

解題說明:

The Huawei CloudEngine S6750-S is a high-performance all-optical switch in the fixed switch series, suitable for 10 Gbps campus networks.

It supports GE/10GE/25GE downlink ports and 25GE/100GE uplink ports (Option A - Correct).

It includes advanced features such as:

VXLAN and network slicing (Option B - Correct)

Real-time telemetry and intelligent O&M via iMaster NCE (Option C - Correct) Native WAC capabilities for wireless and wired convergence (Option E - Correct) However, MACsec (IEEE 802.1AE) is not supported on all ports by default - support is partial or dependent on model/sub-model. Hence, Option D is false.

問題 #71

Which of the following physical connections is not a component of a data center network?

- A. Optical fiber
- B. Access switch
- C. Server
- D. Core/Aggregation switch

答案: C

解題說明:

In a data center network, the physical connection components typically include:

Access switches (connect to servers)

Core/Aggregation switches (form the backbone of the network)

Optical fibers (used for high-speed physical links between switches)

While servers are connected to the network, they are not considered part of the network's physical infrastructure (connection components) - they are endpoints or resources hosted on the network, not components of the physical connection infrastructure.

問題 #72

Which of the following are among the six comprehensive border security protection capabilities? (Select all that Apply)

- A. Application-level ACL
- B. Antivirus
- C. IPS
- D. Built-in firewall
- E. Data encryption
- F. Remote URL filtering

答案: A,B,C,D,F

解題說明:

Huawei's six comprehensive border security protection capabilities for SD-WAN or converged gateway routers typically include:

Built-in Firewall - Provides basic packet filtering and security zoning.

Remote URL Filtering - Uses cloud-based services to filter harmful websites.

Antivirus - Detects and blocks malicious files.

IPS (Intrusion Prevention System) - Detects and blocks known threats and attack signatures.

Application-level ACL - Allows granular control of applications beyond Layer 4 (e.g., blocking TikTok, WhatsApp, etc.).

Data leakage prevention (DLP) and behavioral analytics may also be included depending on the security license.

However, "Data encryption" is a broader category not specifically named among the six security protection items in Huawei's SD-WAN documentation. Encryption (e.g., IPsec VPN) is used for secure tunnels but is not listed as one of the six application-layer protections.

問題 #73

Which of the following are the main development phases of disaster recovery (DR) in a data center? (Select all that Apply)

- A. Two-site three-DC
- B. Multi-site multi-DC
- C. Single DC
- D. Primary/Backup DC

答案：A,B,C,D

解題說明：

Huawei outlines the evolution of disaster recovery (DR) in data centers in four phases:

B: Single DC- No DR capability; all services reside in one data center.

C: Primary/Backup DC- Two data centers where one is primary and the other acts as a backup.

A: Two-site three-DC- One production site and two DR sites (or combinations).

D: Multi-site multi-DC- Advanced architecture with distributed data centers and cross-DR capabilities for resilience.

These are officially listed as DR evolution stages in Huawei's multi-DC solution strategy.

問題 #74

The depth of Huawei's NetEngine 8000 M14 and NetEngine 8000 M8 routers is 220 mm.

- A. True
- B. False

答案：B

解題說明：

The NetEngine 8000 M14 and M8 are modular high-performance WAN routers. Their depth is significantly more than 220 mm. For example:

NetEngine 8000 M8: Approx. 600 mm depth

NetEngine 8000 M14: Larger chassis - deeper than 600 mm

A depth of 220 mm would be typical of very compact devices (e.g., small access routers), not these high-capacity modular systems.
