PL-200 Pdf Pass Leader & Certification PL-200 Book Torrent

Our PL-200 test guide is test-oriented, which makes the preparation become highly efficient. Once you purchase our PL-200 exam material, your time and energy will reach a maximum utilization. Thus at that time, you would not need to afraid of the society and peer pressure with PL-200 Certification. In conclusion, a career enables you to live a fuller and safer life. So if you want to take an upper hand and get a well-pleasing career our PL-200 learning question would be your best friend.

The Microsoft PL-200 exam tests candidates on their understanding of Power Platform components, including Power Apps, Power Automate, Power BI, and Power Virtual Agents. Candidates must also demonstrate their knowledge of data modeling, user experience design, security, and integration with other Microsoft solutions. Successful candidates will have a thorough understanding of the Power Platform's capabilities and be able to apply them to real-world scenarios. The Microsoft PL-200 Certification is an excellent way for functional consultants to differentiate themselves in the job market and demonstrate their expertise in Microsoft Power Platform solutions.

Microsoft Power Platform Functional Consultant Sample Questions (Q102-Q107):

NEW QUESTION # 102
Drag and Drop Question
A company uses a model-driven app for customer support. The company has the following requirements for the app:
- Send an email in real-time to customers when they enter their email
address.
- Send an email to customers at the same time every day for cases that
are open for more than 24 hours.
The solution should require the least amount of customization.
What should you configure? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Answer:

NEW QUESTION # 103

The app needs to store temporary data
* Each screen must maintain a separate copy of data and pass the data to another screen.
* The app must be able to update separate rows of a table independently.
You need to configure variables for the data.
Which variable types should you use? To answer, drag the appropriate variable types to the correct requirements. Each variable type may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.
NOTE: Each correct selection is worth one point.

NEW QUESTION # 104

You are setting up Power Apps security for a company. The company has a CEO, two vice presidents, and 10 managers. Five support representatives report to each manager.
You set up Manager Hierarchy so managers are able to view data only for the representatives who report to them. The CEO must be able to view all data for everyone. All support representatives must be able to view customer information in each other's data across all managers.
You need to resolve issues that arise during testing.
What should you do? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.
▢

Answer:

Explanation:
▢
Explanation
Box 1: Move the manager and reports to a separate business unit.
Keep the Manager hierarchy, and put the reports to the appropriate business unit.
Note: Two security models can be used for hierarchies, the Manager hierarchy and the Position hierarchy.
With the Manager hierarchy, a manager must be within the same business unit as the report, or in the parent business unit of the report's business unit, to have access to the report's data. The Position hierarchy allows data access across business units. If you are a financial organization, you may prefer the Manager hierarchy model, to prevent managers' accessing data outside of their business units. However, if you are a part of a customer service organization and want the managers to access service cases handled in different business units, the Position hierarchy may work better for you.
Box 2: Add the CEO to the representative user record as a manager.
Set up Manager and Position hierarchies
The Manager hierarchy is easily created by using the manager relationship on the system user record. You use the Manager (ParentsystemuserID) lookup field to specify the manager of the user.
Note: Depth is used to limit how many levels deep a manager has Read-only access to the data of their reports.
For example, if the depth is set to 2, the CEO can see the data of the VP of Sales, VP of Service and Sales and Service Managers.
However, the CEO doesn't see the Sales data or the Support data.
Box 3: Add users to field security
Power Platform's field-level security lets you set which fields users can see or edit.

https://docs.microsoft.com/en-us/power-platform/admin/field-level-security

NEW QUESTION # 105

You modify a model-driven app for a bicycle repair help desk. The model-driven app is for help desk users when customers have

an issue with their bicycle.

After you add a custom table named bicycle, you configure the table for Microsoft Dataverse search. The table will contain information from callers about their bicycles. The account table is related to the custom table.

Contact information is brought over to the custom table.

You add the following columns to the table:

Bicycle type

Tire brand

Special equipment

Users must be able to perform the following types of searches:

Search for all customers who have a bicycle type of Contoso and live in Florida.

Search all tables for any record that contains the word broken.

You need to decide which type of search will give you the results desired.

Which search should you configure? To answer, drag the appropriate search types to the correct requirements.

Each search type may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation

Text Description automatically generated

Box 1: Advanced find

Operators for advanced search: Lets you use simple Boolean operators in your search term and craft the query to get the results you want.

Box 2: Dataverse search

Dataverse search helps you quickly find what you're looking for. It delivers fast and comprehensive results across multiple tables in a single list, sorted by relevance.

https://docs.microsoft.com/en-us/power-platform/admin/configure-relevance-search-organization

NEW QUESTION # 106

A company uses a model-driven app. The app uses a Power Virtual Agents chatbot.

The company has two locations in different countries/regions with separate environments for each location. Each location has a development environment, a testing environment, and a production environment. The company uses the Application Lifecycle Management (ALM) process for the environments.

You need to create the different Power Virtual Agents bot environments.

How many Power Virtual Agents bot environments are required?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: D
