High Hit Rate Health-Cloud-Accredited-Professional Free Practice & Passing Health-Cloud-Accredited-Professional Exam is No More a Challenging Task

Do you want to pass your exam by using the latest time? If you do, you can choose the Health-Cloud-Accredited-Professional study guide of us. We can help you pass the exam just one time. With experienced experts to compile and verify the Health-Cloud-Accredited-Professional exam dumps, the quality and accuracy can be guaranteed. Therefore, you just need to spend 48 to 72 hours on training, you can pass the exam. In addition, we offer you free demo to have a try before buying Health-Cloud-Accredited-Professional Study Guide, so that you can know what the complete version is like. Our online and offline chat service stuff will give you reply of all your confusions about the Health-Cloud-Accredited-Professional exam dumps.

Salesforce Health Cloud Accredited Professional Sample Questions (Q42-Q47):

NEW QUESTION # 42
A customer compliance department requires encryption at rest, notification of activities, and extensive field tracking.
What are some key considerations and recommended practices for supporting compliance in Salesforce?

- A. Enable Salesforce Shield to monitor data access and usage, configure Data Classification for sensitive data, and use Event Monitoring to track user activity.
- B. Enable Field Audit Trail, implement encryption for sensitive data, and configure two-factor authentication for all users.
- C. Use Role Hierarchy to control data access, implement password policies for user accounts, and use IP Restrictions to limit access to trusted networks.
- D. Use the Salesforce Security Health Check to Identify vulnerabilities, implement custom profiles and permission sets to control data access, and configure Data Loss Prevention policies to prevent data leakage.

Answer: A

Explanation:
Salesforce Shield provides the necessary tools to meet the compliance requirements of encryption at rest, activity notifications, and extensive field tracking. Below are the key considerations and practices:
Enable Salesforce Shield:
Platform Encryption: Encrypt sensitive data at rest to comply with regulations such as HIPAA and GDPR.
Field Audit Trail: Tracks changes to data, offering up to 10 years of historical data retention for auditing purposes.
Event Monitoring: Monitors user activities such as logins, data exports, and API calls to detect and respond to potential security threats.
Configure Data Classification:
Assign data sensitivity levels to fields (e.g., "Confidential," "Restricted") to help manage compliance requirements.
Use Event Monitoring:
Tracks user actions and system usage to ensure transparency and accountability, which is essential for audits.
Why Other Options Are Incorrect:
A: Security Health Check and Data Loss Prevention policies are useful but do not address encryption or comprehensive compliance tracking.
B: Two-factor authentication enhances security but does not address monitoring or extensive field tracking.
D: Role hierarchy and IP restrictions control access but do not address encryption, tracking, or activity monitoring.

Event Monitoring Documentation

NEW QUESTION # 43
What are three requirements for implementing patients or members in Health Cloud?
Choose 3 answers

- A. Ensure 1-to-1 Account to Contact relationship.
- B. Ensure the Person Account object is used.
- C. Ensure the Account is the Parent to Household Accounts.
- D. Ensure the Parent Contact object is blank.
- E. Ensure the Parent Account field is blank.

Answer: A,B,C

Explanation:
Implementing patients or members in Health Cloud requires careful configuration to accurately represent individual relationships and household structures.

1. Ensure the Account is the Parent to Household Accounts (Answer C):
Purpose: In Health Cloud, modeling household relationships is essential for understanding the familial and support networks of patients. By setting the Account as the parent to Household Accounts, you can effectively represent and manage these relationships.
Implementation Steps:
Create a Household Account to represent the family or support group.
Associate individual Person Accounts (patients) as members of this Household Account.
Use the Account Hierarchy to visualize and manage these relationships.
Reference:
Salesforce
2. Ensure the Person Account Object is Used (Answer D):
Purpose: Person Accounts in Salesforce combine the attributes of accounts and contacts into a single record, suitable for representing individual patients or members. This structure simplifies data management and aligns with Health Cloud's patient-centric model.
Implementation Steps:
Ensure that Person Accounts are enabled in your Salesforce org.
Configure page layouts and record types to support Person Accounts.
Migrate existing individual records to Person Accounts if necessary.
Confianza Salesforce Partner
3. Ensure 1-to-1 Account to Contact Relationship (Answer E):
Purpose: Maintaining a one-to-one relationship between accounts and contacts ensures data integrity and simplifies the management of individual patient records. This setup is particularly important when Person Accounts are not used, as it emulates the combined record structure.
Implementation Steps:
For each Contact, create a corresponding Account to maintain a 1:1 relationship.
Implement automation (e.g., using Salesforce Flow) to enforce this relationship during record creation.
Regularly audit records to ensure compliance with the 1:1 relationship model.

NEW QUESTION # 44
A Salesforce Admin wants to create tasks within a Care Plan that is related to a specific problem or goal. Which three different locations in the Health Cloud console can be used to create tasks related to a specific problem or goal within a Care Plan? (Choose three.)

- A. Patient List
- B. Household Tab
- C. Care Plan page
- D. Care Team
- E. Timeline Tab

Answer: A,C,D

NEW QUESTION # 45
A customer that already has Service Cloud is onboarding a new business unit, which needs to use Health Cloud Which three organization-wide default settings should an administrator change to ensure the original business unit that leverages Service Cloud does not have visibility into protected health information (PHI)?

- A. Set Contact to Controlled by Parent.
- B. Set related clinical objects to Controlled by Parent or Private.
- C. Set Person Accounts to Private.
- D. Set Account and Contract to Private.
- E. Set Health Details to Controlled by Parent or Private

Answer: A,B,D

Explanation:
A is incorrect because setting Person Accounts to Private is not a valid organization-wide default setting. Person Accounts inherit their sharing settings from Accounts and Contacts.
B is correct because setting Contact to Controlled by Parent ensures that the original business unit that leverages Service Cloud does not have visibility into protected health information (PHI) stored in Contact records. This setting means that the access level for Contact records depends on the access level for their parent Account records.

C is correct because setting related clinical objects to Controlled by Parent or Private ensures that the original business unit that leverages Service Cloud does not have visibility into protected health information (PHI) stored in clinical objects, such as Allergy, Diagnosis, Medication Order, and Procedure Order. These objects are related to either Account or Contact objects, and their sharing settings should match or be more restrictive than their parent objects.

D is incorrect because setting Health Details to Controlled by Parent or Private is not a valid organization-wide default setting. Health Details is a custom object that stores health information for patients and members. It is related to the Person Account object, and its sharing settings are controlled by its parent object.

E is correct because setting Account and Contract to Private ensures that the original business unit that leverages Service Cloud does not have visibility into protected health information (PHI) stored in Account and Contract records. This setting means that users can only access the records that they own or are explicitly shared with them.

NEW QUESTION # 46
A customer that already has Service Cloud is onboarding a new business unit, which needs to use Health Cloud.
Which three organization-wide default settings should an administrator change to ensure the original business unit that leverages Service Cloud does not have visibility into protected health information (PHI)?
Choose 3 answers

- A. Set Contact to Controlled by Parent.
- B. Set related clinical objects to Controlled by Parent or Private.
- C. Set Health Details to Controlled by Parent or Private.
- D. Set Account and Contract to Private.
- E. Set Person Accounts to Private,

Answer: B,D,E

NEW QUESTION # 47
......
