Buy Now To Get Free Real Splunk SPLK-4001 Questions Updates

Our loyal customers give us strong support in the past ten years. Luckily, our SPLK-4001 learning materials never let them down. Our company is developing so fast and healthy. Up to now, we have made many achievements. Also, the SPLK-4001 study guide is always popular in the market. All in all, we will keep up with the development of the society. And we always keep updating our SPLK-4001 Practice Braindumps to the latest for our customers to download. Just buy our SPLK-4001 exam questions and you will find they are really good!

As you know, many exam and tests depend on the skills as well as knowledge, our SPLK-4001 study materials are perfectly and exclusively devised for the exam and can satisfy your demands both. There are free demos of our SPLK-4001 exam questions for your reference with brief catalogue and outlines in them. You can free download the demos of our SPLK-4001 learning prep on the website to check the content and displays easily by just clicking on them.

Professional SPLK-4001 Reliable Test Price & Leader in Certification Exams Materials & Trustworthy Valid SPLK-4001 Exam Simulator

The SPLK-4001 exam dumps are real and updated SPLK-4001 exam questions that are verified by subject matter experts. They work closely and check all SPLK-4001 exam dumps one by one. They maintain and ensure the top standard of BraindumpsIT Splunk O11y Cloud Certified Metrics User (SPLK-4001) exam questions all the time. The SPLK-4001 practice test is being offered in three different formats. These SPLK-4001 exam questions formats are PDF dumps files, web-based practice test software, and desktop practice test software.

Splunk SPLK-4001 certification exam is an excellent certification for individuals who want to demonstrate their expertise in using Splunk to monitor and measure the performance of cloud-based applications. Splunk O11y Cloud Certified Metrics User certification provides individuals with the skills and knowledge they need to effectively manage cloud-based applications. It is an online exam that can be taken from anywhere in the world and is designed to be completed in two hours. SPLK-4001 Exam is

proctored to ensure that the candidate is not cheating.

Splunk O11y Cloud Certified Metrics User Sample Questions (Q35-Q40):

NEW QUESTION # 35
Which of the following rollups will display the time delta between a datapoint being sent and a datapoint being received?

- A. Latency
- B. Lag
- C. Delay
- D. Jitter

Answer: B

Explanation:
According to the Splunk Observability Cloud documentation1, lag is a rollup function that returns the difference between the most recent and the previous data point values seen in the metric time series reporting interval. This can be used to measure the time delta between a data point being sent and a data point being received, as long as the data points have timestamps that reflect their send and receive times. For example, if a data point is sent at 10:00:00 and received at 10:00:05, the lag value for that data point is 5 seconds.

NEW QUESTION # 36
Which analytic function can be used to discover peak page visits for a site over the last day?

- A. Lag: (24h)
- B. Maximum: Transformation (24h)
- C. Count: (Id)
- D. Maximum: Aggregation (Id)

Answer: B

Explanation:
According to the Splunk Observability Cloud documentation1, the maximum function is an analytic function that returns the highest value of a metric or a dimension over a specified time interval. The maximum function can be used as a transformation or an aggregation. A transformation applies the function to each metric time series (MTS) individually, while an aggregation applies the function to all MTS and returns a single value. For example, to discover the peak page visits for a site over the last day, you can use the following SignalFlow code:
maximum(24h, counters("page.visits"))
This will return the highest value of the page.visits counter metric for each MTS over the last 24 hours. You can then use a chart to visualize the results and identify the peak page visits for each MTS.

NEW QUESTION # 37
What constitutes a single metrics time series (MTS)?

- A. A set of data points that all have the same metric name and list of dimensions.
- B. A set of metrics that are ordered in series based on timestamp.
- C. A series of timestamps that all reflect the same metric.
- D. A set of data points that use different dimensions but the same metric name.

Answer: A

Explanation:
Explanation
The correct answer is B. A set of data points that all have the same metric name and list of dimensions.
A metric time series (MTS) is a collection of data points that have the same metric and the same set of dimensions. For example, the following sets of data points are in three separate MTS:
MTS1: Gauge metric cpu.utilization, dimension "hostname": "host1" MTS2: Gauge metric cpu.utilization, dimension "hostname": "host2" MTS3: Gauge metric memory.usage, dimension "hostname": "host1" A metric is a numerical measurement that varies over time, such as CPU utilization or memory usage. A dimension is a key-value pair that provides additional information about the

metric, such as the hostname or the location. A data point is a combination of a metric, a dimension, a value, and a timestamp1

NEW QUESTION # 38

An SRE creates an event feed chart in a dashboard that shows a list of events that meet criteria they specify. Which of the following should they include? (select all that apply)

- A. Events created when a detector triggers an alert.
- B. Custom events that have been sent in from an external source.
- C. Random alerts from active detectors.
- D. Events created when a detector clears an alert.

Answer: A,B,D

Explanation:

According to the web search results1, an event feed chart is a type of chart that shows a list of events that meet criteria you specify. An event feed chart can display one or more event types depending on how you specify the criteria. The event types that you can include in an event feed chart are:

Custom events that have been sent in from an external source: These are events that you have created or received from a third-party service or tool, such as AWS CloudWatch, GitHub, Jenkins, or PagerDuty. You can send custom events to Splunk Observability Cloud using the API or the Event Ingest Service.

Events created when a detector triggers or clears an alert: These are events that are automatically generated by Splunk Observability Cloud when a detector evaluates a metric or dimension and finds that it meets the alert condition or returns to normal. You can create detectors to monitor and alert on various metrics and dimensions using the UI or the API.

Therefore, option A, B, and D are correct.

NEW QUESTION # 39

When creating a standalone detector, individual rules in it are labeled according to severity. Which of the choices below represents the possible severity levels that can be selected?

- A. Info, Warning, Minor, Major, and Critical.
- B. Debug, Warning, Minor, Major, and Critical.
- C. Info, Warning, Minor, Severe, and Critical.
- D. Info, Warning, Minor, Major, and Emergency.

Answer: A

Explanation:

The correct answer is C. Info, Warning, Minor, Major, and Critical.

When creating a standalone detector, you can define one or more rules that specify the alert conditions and the severity level for each rule. The severity level indicates how urgent or important the alert is, and it can also affect the notification settings and the escalation policy for the alert1 Splunk Observability Cloud provides five predefined severity levels that you can choose from when creating a rule: Info, Warning, Minor, Major, and Critical. Each severity level has a different color and icon to help you identify the alert status at a glance. You can also customize the severity levels by changing their names, colors, or icons2 To learn more about how to create standalone detectors and use severity levels in Splunk Observability Cloud, you can refer to these documentations12.

1: https://docs.splunk.com/Observability/alerts-detectors-notifications/detectors.html#Create-a-standalone-detector 2: https://docs.splunk.com/Observability/alerts-detectors-notifications/detector-options.html#Severity-levels
