The moment your money has been transferred to our account, and our system will send our 010-160 training dumps to your mail boxes so that you can download 010-160 exam questions directly. It is fast and convenient out of your imagination.

## Lpi Linux Essentials Certificate Exam - version 1.6 Sample Questions (Q18-Q23):

### NEW QUESTION # 18

Which command adds the new user and creates the user's home directory with default configuration files?

- A. usercreate tux

- B. useradd -m tux
- C. defaultuser tux
- D. passwd -a tux
- E. useradd -o default tux

**Answer: B**

#### NEW QUESTION # 19

What is true about the dmesg command? (Choose two correct answers.)

- A. It traces the execution of a command and shows each step the program carries out.
- B. It sends messages to the command lines of all current user sessions.
- C. It immediately outputs all new messages written to the system journal.
- D. It might not display older information because it was overwritten by newer information.
- E. It displays the content of the Linux kernel's ring buffer.

**Answer: D,E**

Explanation:

Explanation

The dmesg command is used to display the messages from the kernel that are stored in a ring buffer. A ring buffer is a fixed-size data structure that overwrites the oldest entries when it is full. Therefore, the dmesg command might not display older information because it was overwritten by newer information. The dmesg command is useful for troubleshooting system issues and checking hardware information. The dmesg command is not used to trace the execution of a command, send messages to user sessions, or output the system journal. Those functions are performed by other commands such as strace, write, and journalctl respectively. References: : [dmesg] : [Ring buffer] : [strace] : [write (Unix)] : [journalctl]4)

#### NEW QUESTION # 20

What is the preferred source for the installation of new applications in a Linux based operating system?

- A. The distribution's package repository
- B. The vendor's website
- C. A retail store
- D. A CD-ROM disk
- E. The vendor's version management system

**Answer: A**

Explanation:

Explanation/Reference:

#### NEW QUESTION # 21

Which of the following outputs could stem from the command last?

- A. 1 ls  
2 cat text.txt  
3 logout
- B. Password for user last changed at Sat Mar 31 16:38:57 EST 2018
- C. EXT4-fs (dm-7): mounted filesystem with ordered data mode. Opts: (null)
- D. Last login: Fri Mar 23 10:56:39 2018 from server.example.com
- E. root tty2 Wed May 17 21:11 - 21:11 (00:00)

**Answer: E**

Explanation:

The last command in Linux is used to display the list of all the users logged in and out since the file /var/log/wtmp was created1. The output of the last command shows the username, the terminal, the IP address, the login time and date, and the duration of the session for each record2. The option E is the only one that matches this format. The other options are not related to the last command.

Option A shows a list of commands executed by a user. Option B shows the password change information for a user. Option C shows the last login information for a user. Option D shows the mount information for a filesystem. Reference: Linux Essentials Version 1.6 Objectives3, Topic 1.4: Command Line Basics, Subtopic: Basic Shell Commands Linux last Command Tutorial for Beginners (8 Examples)4 Linux Essentials Version 1.6 Exam Preparation Guide, Section 1.4: Command Line Basics, Page 16

### NEW QUESTION # 22

Which of the following commands finds all lines in the file operating-systems.txt which contain the term linux, regardless of the case?

- A. `igrep linux operating-systems.txt`
- B. `less -i linux operating-systems.txt`
- C. `grep -i linux operating-systems.txt`
- D. `cut [Ll] [Ii] [Nn] [Uu] [Xx] operating-systems.txt`
- E. `cut linux operating-systems.txt`

**Answer: C**

Explanation:

Explanation

The `grep` command is used to search for a pattern in a file or input. The `-i` option makes the search case-insensitive, meaning that it will match both uppercase and lowercase letters. The `grep` command takes the pattern as the first argument and the file name as the second argument. Therefore, the command `grep -i linux operating-systems.txt` will find all lines in the file `operating-systems.txt` which contain the term `linux`, regardless of the case.
