# 2026 Useful OGA-032: New ArchiMate 3 Part 2 Exam Exam Test

By keeping minimizing weak points and maiming strong points, our The Open Group OGA-032 exam materials are nearly perfect for you to choose. As a brand now, many companies strive to get our ArchiMate 3 Part 2 Exam OGA-032 practice materials to help their staffs achieve more certifications for our quality and accuracy.

VCE4Dumps The Open Group OGA-032 test answers are the most effective and we guarantee your success in the first attempt. If you do not pass The Open Group OGA-032 exam, we will give you a FULL REFUND of your purchasing fee. Failure in exam will not affect your finance. On request we can provide you with another exam of your choice absolutely free of cost. Think you! What do you have to lose? The Open Group OGA-032 Test Answers are the latest and 100% guarantee to pass your OGA-032 exam.

>> New OGA-032 Exam Test <<

Valid OGA-032 Exam Guide, Simulation OGA-032 Questions

The OGA-032 exam prepare of our website is completed by experts who has a good understanding of real exams and have many years of experience writing OGA-032 study materials. They know very well what candidates really need most when they prepare for the exam. They also understand the real exam situation very well. So they compiled OGA-032 Exam prepare that they hope to do their utmost to help candidates pass the exam and get what job they want. They apply to exam candidates of different level of computer industry. So whichever degree you are at, you can utilize our OGA-032 study materials tool with following traits.

The Open Group ArchiMate 3 Part 2 Exam Sample Questions (Q10-Q15):

NEW QUESTION # 10
Please read this scenario prior to answering the question
The ArchiSurance Mobile consumer solution is used for selling and renewing insurance products, providing customer service, enabling accurate and convenient home recordkeeping, and capturing and processing claims. The solution consists of three applications. The Consultant application lets customers review their existing coverage, and update it based on common life events, such as getting a new car, moving into a new home, or having a family member move in or out. If necessary, they can speak or chat with a customer service representative. The Home Manager application helps customers photograph and catalogue their valuable possessions in order to support the filing of accurate claims in case of loss or damage. The Claim Manager application enables customers to quickly file a claim for loss or damage to an insured auto, home or possession. It enables customers to describe the incident by referencing information captured with the Consultant and the Home Manager applications. In addition, it allows the customer to add photographs, audio, video and text to support a claim, submit the claim, and monitor its progress.
The ArchiSurance Mobile applications rely on a number of application services hosted by ArchiSurance. The first is an Auto Identification and Description (AID) service that the Consultant application uses to validate and complete auto information entered by customers. The second service, Home Identification and Description (HID) performs the same function for home information, and

is used by the Home Manager application. The Consultant application also uses the Virtual Agent service to guide customers as they select coverage options, the Payment Processor service to arrange premium payments, and the Coverage Activator service to generate policies and put them in force.

ArchiSurance Mobile also relies on a number of technology services. The Home Manager application uses a Multimedia Repository service to store and retrieve information about insured homes. The Claim Manager application also uses this service for claim information entered by customers. All three ArchiSurance Mobile applications use a Personal Security service to register and authenticate customers, and to manage their profiles.
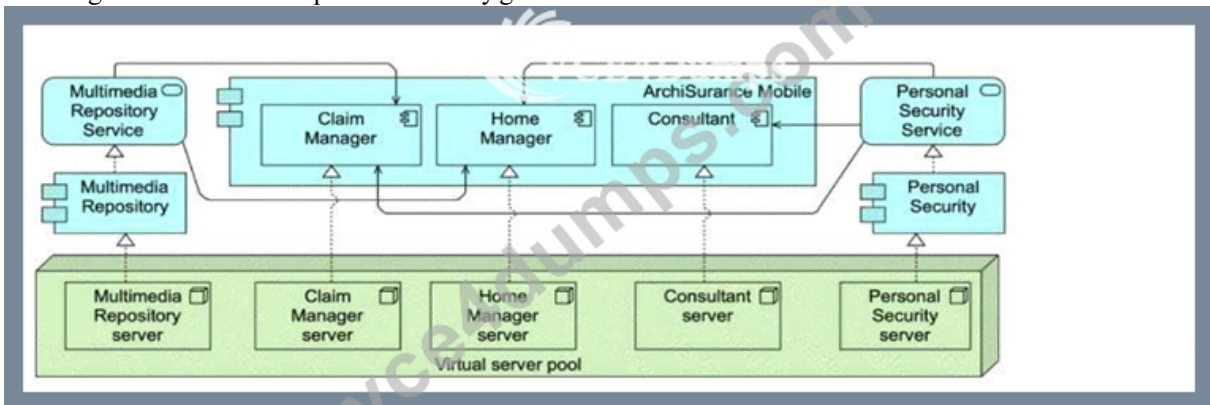

Each application service is realized by an application component with the same name. Each technology service is realized by a system software environment, having the same name. ArchiSurance hosts both the application components and system software environments in a virtualized server pool within its data center. Each service has its own virtual server. Each virtual server is connected to a data center network (DCN) which in turn connects to a commercial wide area network (WAN).
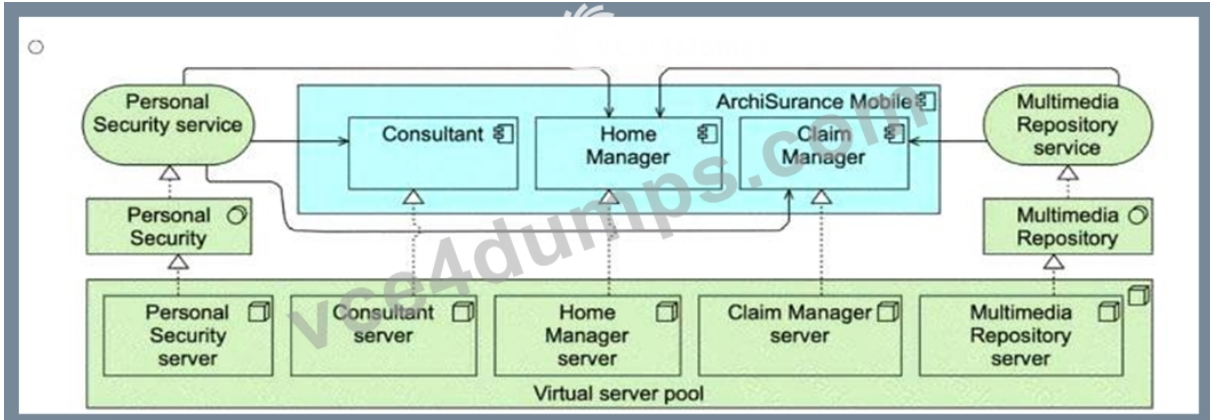

Refer to the Scenario

You have been asked to show the applications that make up the ArchiSurance Mobile solution and the technology that supports these applications.

Which of the following answers provides the best description? Note that it is not necessary to model the networks.
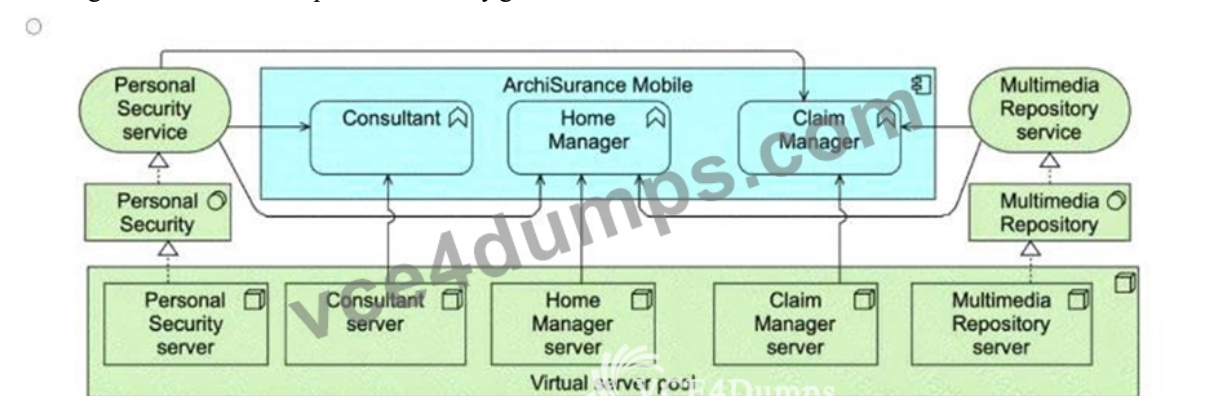

- A. A diagram of a server Description automatically generated

- B. A diagram of a server Description automatically generated

- C. A diagram of a server Description automatically generated

- D. A diagram of a computer server Description automatically generated

Answer: D

Explanation:

In this scenario, the focus is on modeling the ArchiSurance Mobile solution, showing the applications that make up this solution and the technology infrastructure that supports them. This includes applications, application services, and the system software environments (technology services) upon which the applications rely.

Key ArchiMate® 3.2 Concepts Applied:

* Application Components and Services:
* Consultant Application:This allows customers to review, update coverage, and speak with customer service representatives. It uses the following application services:
* Auto Identification and Description (AID)for validating auto information.
* Virtual Agentfor helping customers select options.
* Payment Processorto arrange payments.
* Coverage Activatorto generate and activate policies.
* Home Manager Application:This allows customers to catalogue possessions and use theHome Identification and Description (HID)service to validate home information.
* Claim Manager Application:Enables filing of claims, referencing data from theConsultantand Home Managerapplications and storing information (such as photos, videos) via theMultimedia Repository.
* Technology Services:
* Personal Security Service:Used for customer registration, authentication, andprofile management across all three applications.
* Multimedia Repository Service:Used to store and retrieve information related to home possessions and claim details, supporting both theHome ManagerandClaim Manager applications.
* Technology Infrastructure:
* Each application component (Consultant, Home Manager, Claim Manager) is hosted on its own virtual serverwithin avirtualized server pool.
* Each technology service is realized by a corresponding system software environment (e.g., Multimedia Repository, Personal Security), each with its own virtual server.
* The infrastructure is hosted in a data center, but the focus here is on the services rather than the network connections.

Why Option C is Correct:

* Option Caccurately represents the keyapplications(Consultant, Home Manager, Claim Manager) in connection with the appropriatetechnology servicesand their respectivevirtual servers.
* The model shows the relationships between the applications and their dependencies onPersonal SecurityandMultimedia Repository, aligning with the description provided.
* Thevirtual server poolis depicted clearly, showing how the applications and services are realized within this infrastructure.
* The relationships betweenapplicationsandapplication services(AID, HID, Virtual Agent, Payment Processor, Coverage Activator) are not modeled in full detail here, but they are implicitly understood through the applications.

Why Other Options Are Incorrect:

* Option AandOption Dboth incorrectly depict some relationships between the applications and their supporting technology services or servers, or miss certain dependencies.
* Option Bdoes not provide as clear a depiction of the virtualized infrastructure and how the applications relate to theMultimedia RepositoryandPersonal Securityservices.

Conclusion:

Option Cprovides the most accurate and complete description of theArchiSurance Mobile solutionand the supporting technology, as required by the scenario. It correctly illustrates the relationships between the applications, the virtual servers, and the supporting technology services according to ArchiMate® 3.2 principles.

NEW QUESTION # 11

Please read this scenario prior to answering the question

ArchiSurance has decided to leverage its financial expertise by offering defined contribution retirement plans.

Each trading day, ArchiSurance submits consolidated mutual fund trading transactions to a stock exchange on behalf of its retirement plan participants.

The daily mutual fund trading cycle consists of four key processes: Transaction capture, pricing, trading and reconciliation. Transaction capture consists of two sub-processes: manual exchange and loans and distributions (L&D). For transaction capture, retirement plan participants use an online account management application to enter manual fund exchange transactions. For L&D, plan participants use a separate application to enter requests. The L&D application determines whether the request can be fulfilled based on the mutual fund balances held in each plan balances and a set of business rules. Each day's captured manual exchange transactions accumulate in a transaction database.

ArchiSurance contracts with a third-party information service to receive a file of mutual fund prices at the close of each trading day. The pricing application uses this file to convert captured transaction into trades, and then validates each trade against the mutual fund balances held in each plan. The pricing application generates a trade file with the minimum number of trades necessary. The trading application sends this file to an external trading service.

When the trading application

receives a confirmation file back from the trading service, it causes the reconciliation application to update the plan recordkeeping database.
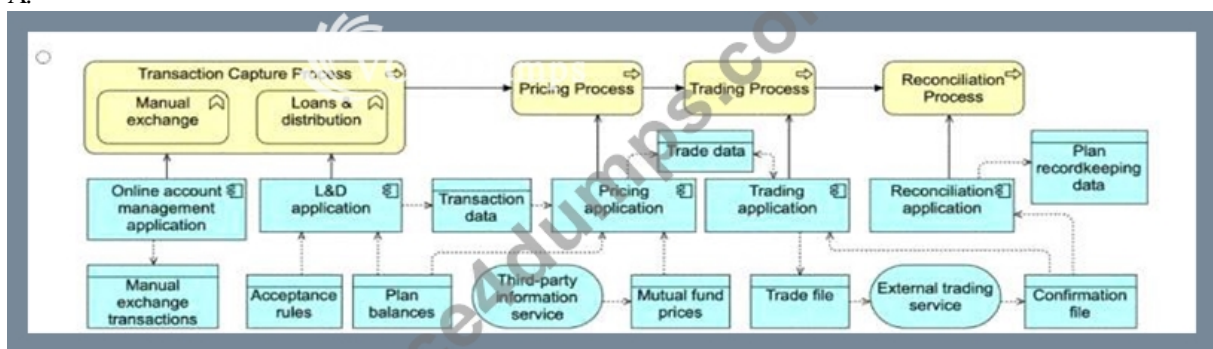

The account management and L&D applications are hosted on separate application server clusters. Each cluster is a physically separate host that runs application server software on a set of virtualized hosts. All of these applications use a database server infrastructure that is hosted on another separate cluster of virtualized servers also on a dedicated physical host. The pricing, consolidation, trading and reconciliation applications, however, are batch applications that run on the ArchiSurance mainframe computer. All application hosts are connected via a converged data center network (DCN), which also connects them to a storage area network (SAN) as well as a wide area network (WAN) that is used to communicate with the external trading service. The SAN includes two physically separate storage arrays, one of which holds data for all databases, and another that holds data for all files.
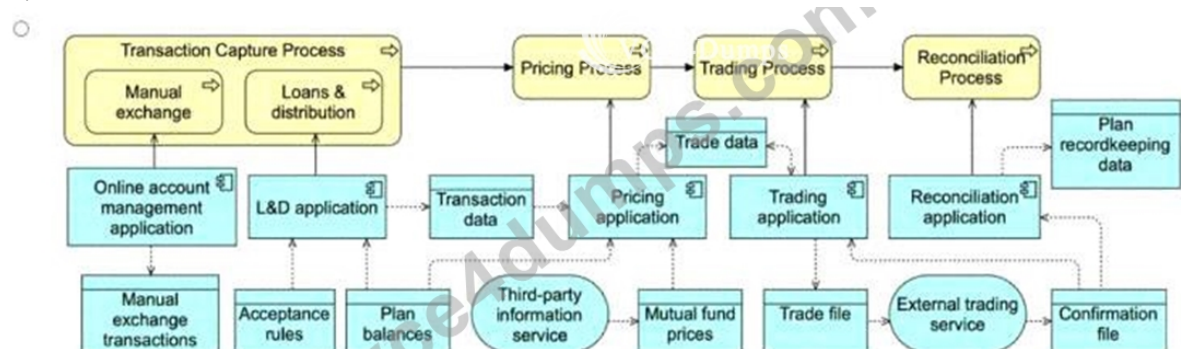

Refer to the Scenario

The systems analysts would like to better understand the business processes and applications for daily fund trading. You have been asked to describe the business processes and sub-processes, the applications that they use, the data objects accessed by those applications, and the external application services that access some of those data objects.

Which of the following is the best answer? Note that you are not required to model the business actors/roles.
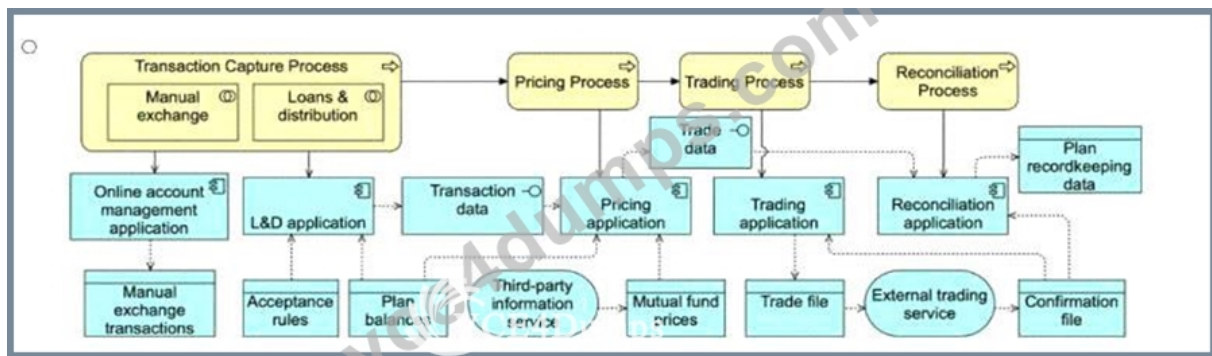

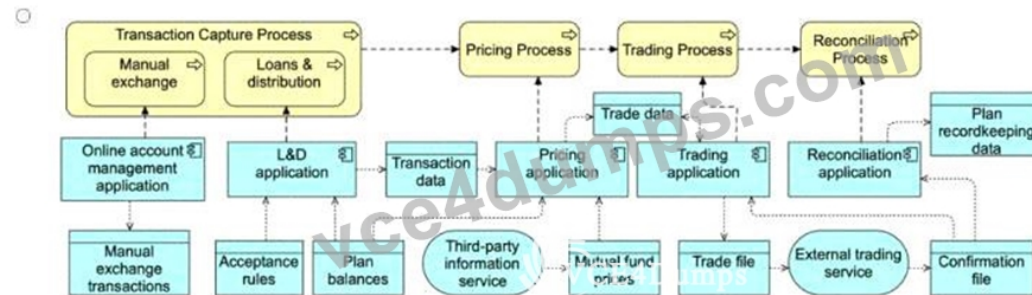

- A.

- B.

- C.

- D.

Answer: C

Explanation:

In this scenario, the goal is to model the business processes, their sub-processes, the applications supporting these processes, and the data objects these applications access. Additionally, external services that access some of these data objects need to be shown. This includes capturing the key processes and their dependencies, as well as understanding how the applications interact with data and external services.

Key ArchiMate® 3.2 Concepts Applied:

* Business Processes and Sub-Processes:
* Transaction Capture Process: Consists of two sub-processes:
* Manual Exchange
* Loans & Distribution (L&D)This process is responsible for capturing transactions from users through different applications (Online Account Management, L&D Application).
* Pricing Process: This process uses theMutual Fund Pricesfrom a third-party service and the Plan Balancesto validate and price trades.
* Trading Process: This process generates aTrade Fileand interacts with an externalTrading Service.
* Reconciliation Process: This final process updates thePlan Recordkeeping Dataafter confirming trades from theExternal Trading Service.
* Applications and Data:
* Online Account Management ApplicationandL&D Application: These capture user inputs for transactions and maintainTransaction DataandPlan Balances.
* Pricing Application: UsesMutual Fund PricesandTransaction Datato generateTrade Data.
* Trading Application: SubmitsTrade Dataand receives aConfirmation Filefromthe external Trading Service.
* Reconciliation Application: Uses theConfirmation Fileto updatePlan Recordkeeping Data.
* External Application Services:
* Third-Party Information Service: ProvidesMutual Fund Prices.
* External Trading Service: Processes trades and returns aConfirmation File.
* Data Objects:
* Transaction Data: Captured by the transaction capture processes.
* Mutual Fund Prices: Received from the third-party service.
* Trade Data: Generated by the pricing and trading applications.
* Plan Recordkeeping Data: Updated by the reconciliation process after trade confirmation.
Why Option B is Correct:
* Option Bprovides the most complete and accurate representation of the scenario. It captures the business processes(Transaction Capture, Pricing, Trading, Reconciliation) and their sub-processes, while showing the appropriate connections to theapplicationsthat support these processes.
* It clearly depicts thedata objects(Transaction Data, Plan Balances, Trade File, Mutual Fund Prices, Plan Recordkeeping Data) and their flows between the processes and applications.

* The model also includes the external services (Third-Party Information Service and External Trading Service), showing how these interact with the internal applications and data objects.
* It accurately represents the flow of Trade Data from the Pricing Application to the Trading Application
, and the use of Mutual Fund Prices by the Pricing Process.
Why Other Options Are Incorrect:
* Option A and Option D miss some critical connections between the applications and the external services. They also lack clarity in how the data flows between the processes and applications.
* Option C does not adequately represent the interaction between the applications and the external services (e.g., Third-Party Information Service), which is a key requirement in this scenario.
Conclusion:
Option B provides the best and most accurate description of the business processes, applications, data objects, and external services involved in ArchiSurance's daily fund trading operations, following ArchiMate® 3.2 standards for modeling business processes and applications.

NEW QUESTION # 12

Please read this scenario prior to answering the question
ArchiSurance has decided to leverage its financial expertise by offering defined contribution retirement plans.
Each trading day, ArchiSurance submits consolidated mutual fund trading transactions to a stock exchange on behalf of its retirement plan participants.
The daily mutual fund trading cycle consists of four key processes: Transaction capture, pricing, trading and reconciliation.
Transaction capture consists of two sub-processes: manual exchange and loans and distributions (L&D). For transaction capture, retirement plan participants use an online account management application to enter manual fund exchange transactions. For L&D, plan participants use a separate application to enter requests. The L&D application determines whether the request can be fulfilled based on the mutual fund balances held in each plan balances and a set of business rules. Each day's captured manual exchange transactions accumulate in a transaction database.
ArchiSurance contracts with a third-party information service to receive a file of mutual fund prices at the close of each trading day. The pricing application uses this file to convert captured transaction into trades, and then validates each trade against the mutual fund balances held in each plan. The pricing application generates a trade file with the minimum number of trades necessary. The trading application sends this file to an external trading service. When the trading application receives a confirmation file back from the trading service, it passes it to the reconciliation application, which updates the plan recordkeeping database.
The lead application Architect has decided to merge the pricing application, the trading application and the reconciliation application into one application, which will be serving the pricing, trading and reconciliation processes respectively. The reason for this is that maintenance costs for these three components are too high and the performance is too slow. This implementation will increase the performance and lower the maintenance cost significantly.
The CIO has agreed on this plan, but wants this to be done in two phases, each in a separate project. Phase 1 should include the merger of the Trading and Pricing applications. Phase 2 should then merge the merged applications with the Reconciliation application respectively. Each project phase has a number of defined deliverables. Phase 1 has two deliverables, TraPri application implemented and tested' and 'Active TraPri application', whichtogether form a first transition architecture. Phase 2 has two deliverables, 'Recon 2.0 application implemented and tested' and 'Back-up applications phased out', which together form the second transition architecture. These two projects are part of the ArchiSurance application integration program scheduled for the next 6 months.
Refer to the Scenario
You have been asked by the lead application architect to show how the applications used for daily trading can be migrated. This should include a description of the work packages, deliverables and transition architectures.
Which of the following answers best describes the applications and migration plan?

* A. A diagram of a process flow AI-generated content may be incorrect.

- B. A diagram of a process AI-generated content may be incorrect.

- C. A diagram of a process flow AI-generated content may be incorrect.

- D. A diagram of a trading application AI-generated content may be incorrect.

Answer: A

Explanation:
We need to determine the best model that:
* Shows the current applications and their functions- Pricing, Trading, and Reconciliation applications.
* Represents the migration phases-

* Phase 1:Merges the Trading and Pricing applications intoTraPri.
* Phase 2:MergesTraPriwith the Reconciliation application to createRecon 2.0.
* Includes transition architectures- Each phase has distinct deliverables marking the transition from old applications to new merged applications.
* Shows the work packages and dependencies- The sequence of activities leading to the final implementation.
Why D is the Best Choice:
#Clearly distinguishes baseline (existing) applications and the new applicationsafter the migration.# Illustrates the two transition states correctly-
* First transition:Implementation and activation of theTraPriapplication.
* Second transition:Implementation ofRecon 2.0and phase-out of backup applications.#Depicts the migration process sequentially-Ensuring a clear understanding of how the applications evolve over time.#Work packages and deliverables are well structured-Aligning with the phases described in the scenario.
Why Not A, B, or C?
* A:Does not correctly represent the transition phases and their deliverables.
* B:Lacks clarity in differentiating baseline applications from transition architectures.
* C:Misrepresents dependencies and transition states, making the migration process unclear.

NEW QUESTION # 13

Please read this scenario prior to answering the question

ArchiCar has been a market leader in the premium priced luxury car sector for the last decade. Its product leadership strategy has brought superior products to market, and enabled ArchiCar to achieve premium prices for its cars. This strategy has been widely successful in the past, but recently competitors have been offering comparable products and taking significant market share. The governing board of ArchiCar has identified opportunities in emerging markets where the ArchiCar brand is associated with luxury and high performance products, but is thought to be too expensive for mass-market success. Based on this assessment, the board has made the decision to setup a subsidiary company to mass- produce affordable cars locally. This will be achieved by focusing on a strategy of operational excellence. Such a strategy is ideal for such markets where customers value cost over other factors.

To facilitate this strategic transformation, the project has been divided into multiple phases within a five-year program. The initial phase, known as "Achieving Operational Excellence," is underway. The engineering team has begun devising an action plan to drive the necessary changes and outlining the technological conditions that must be met. The product architect has identified three current capabilities - industry-leading engineering, high-quality materials sourcing, and cutting-edge focussed R&D - along with their contributions to the new production philosophy.

Moving forward, it has been determined that two out of the three current capabilities require revision.

Materials sourcing needs to be adjusted to meet optimization demands, and R&D targets must align with future goals to enable affordable production. Additionally, process engineering is introduced as a fourth capability to shift the company's focus from products to a process-oriented approach.

The Enterprise Architecture team has been tasked with migration planning, and identifying key work packages and deliverables. They have identified two transition states between the current and future scenario.

The first transition aims to adjust

current capabilities, including revising the R&D approach and procurement strategy. The second transition aims to shift from a product-centric mindset to a process-focused approach and adjust materials sourcing accordingly. It is important to consider existing supplier contracts that cannot be immediately canceled during this process.
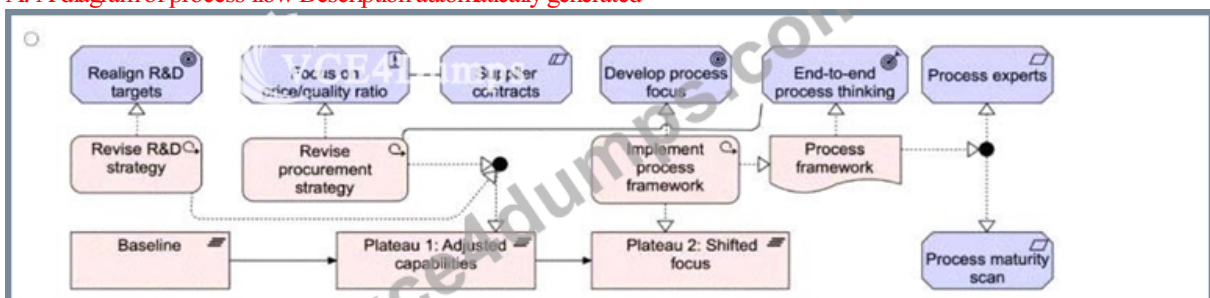

The Enterprise Architecture team has identified that the second transition must implement a process framework, in order to shift to a process focus and meet a number of requirements, including the requirement for end-to-end process thinking. As this requirement impacts procurement processes, it also impacts the procurement strategy.

Refer to the Scenario

You have been asked to model parts of the overall scenario, including migration planning, the motivations driving the migration, and the work packages necessary to achieve the desired deliverables.
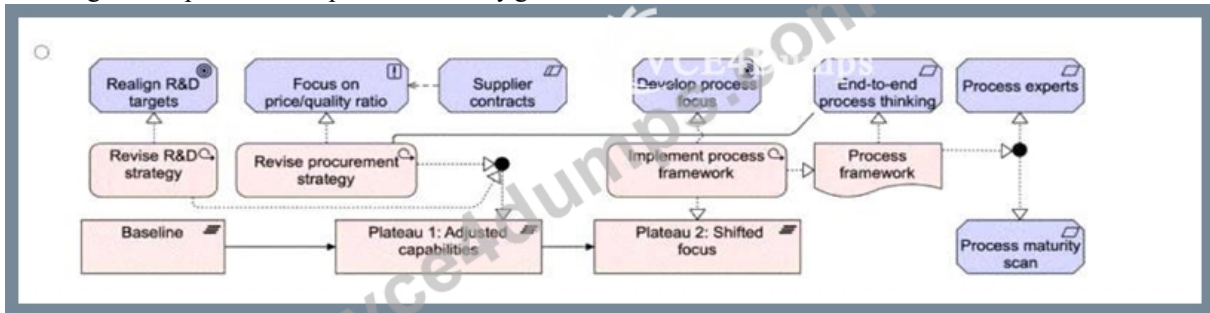

Which of the following answers best describes the scenario?

* A. A diagram of process flow Description automatically generated

- B. A diagram of a process Description automatically generated

- C. A diagram of a process Description automatically generated

- D. A diagram of a process Description automatically generated

Answer: A

Explanation:

This scenario involves migration planning for ArchiCar as it transitions from a product-centric approach to an operational excellence strategy for mass-producing affordable cars in emerging markets. The task is to model the steps involved, including work packages, deliverables, and the motivations driving the transitions.

Key ArchiMate® 3.2 Concepts Applied:

* Capabilities and Transition Phases:
* The existing capabilities-R&D, material sourcing, and engineering-need to be adjusted to fit the new strategy. In particular:
* Revising R&D targets to align with the goal of affordable production.
* Revising the procurement strategy to optimize material sourcing.
* Introduction of a process focus in the second phase to shift from a product-centered approach to operational excellence.
* Two transition states are identified:
* Plateau 1 (Adjusted Capabilities):Focuses on revising the R&D strategy and procurement strategy.
* Plateau 2 (Shifted Focus):Involves shifting to a process-oriented focus, adjusting material sourcing, and implementing a process framework to enable end-to-end process thinking.
* Work Packages and Deliverables:
* Work packages include activities such as revising R&D strategy and procurement strategy during the first transition, and then developing process focus and implementing a process framework in the second transition.
* These work packages are linked to key deliverables:
* Plateau 1: Realigning R&D and procurement strategies to achieve adjusted capabilities.
* Plateau 2: Implementing a process framework, shifting to process-oriented thinking, and achieving the operational excellence goals.
* Motivation Elements:
* The migration is driven by a need to realign current capabilities (such as focusing R&D on affordability and optimizing procurement) and a requirement to shift focus from product leadership to operational excellence.
* The external driver is the competition and market opportunity in emerging markets, where cost is more critical than luxury.

* Dependencies and Constraints:
* Supplier contracts may impose constraints on how quickly procurement strategies can change, which is considered in the transition planning.
* The process framework must be implemented in a way that supports end-to-end process thinking
.
Why Option B is Correct:
* Option B accurately reflects the two transition phases (Plateaus 1 and 2) and shows the appropriate work packages and deliverables in line with the scenario.
* It clearly models the steps for revising R&D strategy and procurement strategy in the first transition, and the shift to a process focus in the second transition.
* The process framework and its link to end-to-end process thinking and procurement strategy are also correctly modeled, fulfilling the requirements of the scenario.
* Motivations for the changes, such as the focus on the price/quality ratio, and the external drivers for shifting strategy are well captured.
Why Other Options Are Incorrect:
* Option A and Option C misrepresent or omit important relationships between work packages, such as the link between the process framework and the end-to-end process thinking.
* Option D does not correctly capture the sequence of work packages and the logical flow of transitions between phases.
Conclusion:
Option B provides the most complete and accurate description of the scenario, correctly illustrating the migration planning, motivations, and the work packages necessary to achieve the target state. It aligns well with ArchiMate® 3.2 modeling standards and meets the scenario's requirements.

NEW QUESTION # 14

Please read this scenario prior to answering the question

The ArchiSurance senior management, board members, customers, and major stockholders have expressed long-standing concerns regarding the business continuity risks associated with relying on a single data center.

Located in an area prone

to flooding, earthquakes, and occasional water leaks from the cafeteria above, the current data center has significant vulnerabilities. To address these concerns and mitigate the risks, ArchiSurance has developed a comprehensive plan to relocate its existing data center to two separate ready-to-use data centers in different cities. As a major undertaking, the approval of the Board of Directors is required to proceed with the project.

The primary objectives of the data center move are to reduce the risk of business interruptions, reduce both planned and unplanned downtime for critical applications, and provide reassurance to ArchiSurance stakeholders. Ensuring minimal disruption during the transition is crucial. However, several constraints make the planned migration to the new data centers particularly challenging. Certain critical ArchiSurance applications cannot be offline for more than one hour, and any planned downtime must be restricted to specific four-hour windows on weekends. Additionally, the migration cannot take place during quarterly or year-end closing periods to avoid disrupting critical processing operations.

ArchiSurance management has devised a multi-phase data center transformation program to facilitate a smooth transition. Each phase is critical for establishing stable and fully functional data center configurations throughout the transformation process. The initial phase entails detailed scheduling and planning to develop a comprehensive transformation plan aligned with ArchiSurance's timing and scheduling requirements. During the second phase, ArchiSurance will procure the necessary hardware and software for the new data centers, while also seeking refunds for the hardware and software in the current data center once it is decommissioned. The third phase involves setting up the new data centers and conducting parallel testing of the new hardware and software alongside the existing production environment. The transition between the old and new data centers occurs in the fourth phase, followed by the fifth phase, which is the decommissioning of the old data center. This involves returning the hardware and software to obtain the contracted refunds. Each phase, from the second to the fifth, is initiated once specific conditions outlined in the previous phase have been met.
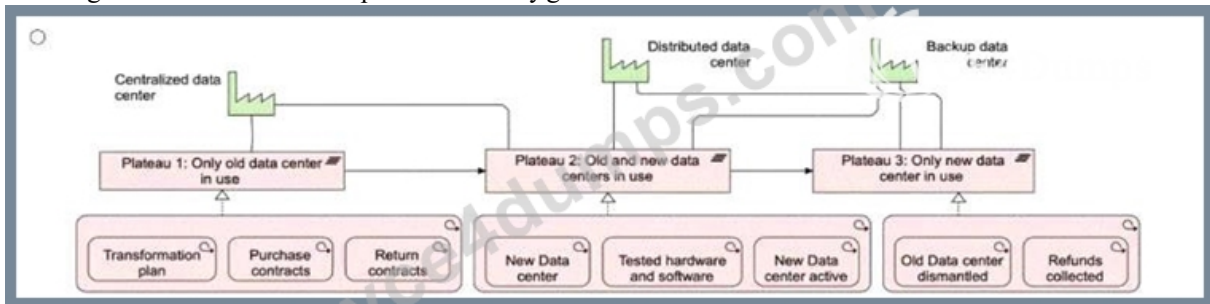

Refer to the Scenario

The program manager overseeing the data center transformation has asked you to model an outline of the implementation plan which has three stable states defined. You should show the deliverables associated with each plateau in connection with the physical elements. Additionally, you need to show how each phase contributes to achieving a stable state for the data center transformation. Which of the following answers provides the best description?
* A. A diagram of a data processing process Description automatically generated
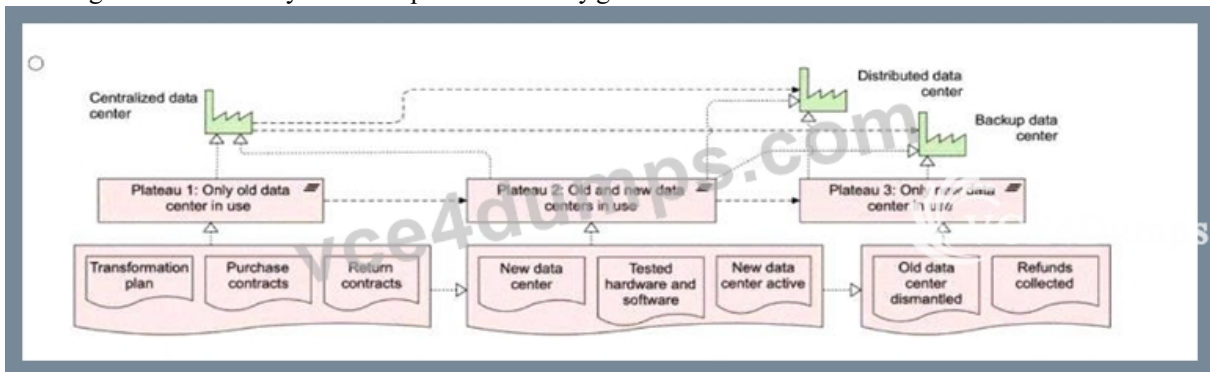

- B. A diagram of a data center Description automatically generated

- C. A diagram of a software process Description automatically generated

- D. A diagram of a software system Description automatically generated

Answer: A

Explanation:

This question focuses on modeling the implementation plan for the data center transformation atArchiSurance. The goal is to represent how the different phases of the project contribute to achieving the three stable states, orplateaus, while illustrating the deliverables connected to these plateaus and the physical elements involved.

Key ArchiMate® 3.2 Concepts Applied:

* Plateaus:Plateaus representintermediate stable stateswithin an architecture transformation, showing the condition of the architecture at specific moments in time. In this scenario, the plateaus correspond to the stable data center configurations at different phases:
* Plateau 1:Only the old data center is in use.
* Plateau 2:Both the old and new data centers are in use simultaneously.
* Plateau 3:Only the new data center is in use, and the old data center is fully decommissioned.
* Physical Elements:These refer to thedata centers,hardware,software, andnetworksthat make up the infrastructure being migrated. These should be clearly depicted in connection with each phase of the transformation program.
* Deliverables and Phases:Each phase of the transformation process includes specific deliverables, such as:
* Procurement of new hardware and software.

* Setting up and testing the new data centers.
* Transitioning between the old and new data centers.
* Dismantling the old data center and returning its hardware for refunds.
* Work Packages and Dependencies: Work packages represent activities or tasks in ArchiMate® and are connected to the plateaus. These must be modeled with proper sequencing, showing how each phase contributes to reaching the next stable state.
Why Option A is Correct:
* Option A accurately represents the three plateaus (stable states) and clearly illustrates the deliverables (e.g., the new data center, tested hardware and software, and dismantled old data center) in relation to each phase of the transformation.
* The connections between the physical elements (such as the centralized data center, distributed data center, and backup data center) are properly displayed and aligned with the described multi-phase process.
* The phases are laid out logically, showing how each phase (e.g., procurement, testing, transition) leads to the next stable state (plateau), following the principles of a plateau and work package transformation in ArchiMate®.
* The flow of deliverables from one plateau to the next is consistent with the need for dependencies (e.g., the new data center cannot be fully active until the hardware and software have been tested in parallel).
Why Other Options Are Incorrect:
* Option B and Option D do not show the relationships between the phases and the stable states as clearly as Option A. They lack some critical connections or do not accurately represent the progression between plateaus and the physical infrastructure.
* Option C is closer but misses important sequencing in how the work packages (activities) and plateaus interact, leading to an incomplete representation of the transformation.
Conclusion:
Option A provides the most complete and accurate description based on ArchiMate® 3.2 modeling principles.
It correctly demonstrates how each phase of the data center transformation contributes to achieving the stable states (plateaus) and ensures that the physical elements, work packages, and deliverables are properly aligned.

NEW QUESTION # 15
......

The OGA-032 practice materials are a great beginning to prepare your exam. Actually, just think of our OGA-032 practice materials as the best way to pass the exam is myopic. They can not only achieve this, but ingeniously help you remember more content at the same time. It is estimated conservatively that the passing rate of the exam is over 98 percent with our OGA-032 Study Materials as well as considerate services. We not only provide all candidates with high pass rate study materials, but also provide them with good service.

Valid OGA-032 Exam Guide: https://www.vce4dumps.com/OGA-032-valid-torrent.html

Do you have questions or inquiries about our OGA-032 exam dumps, So you can do your decision whether to choose OGA-032 exam dumps or not, Even if you have bought our Valid OGA-032 Exam Guide - ArchiMate 3 Part 2 Exam demo questions, you are still available to enjoy our online workers' service, Our hard-working technicians and experts take candidates' future into consideration and pay attention to the development of our Valid OGA-032 Exam Guide - ArchiMate 3 Part 2 Exam training material, If you do not purchase Prep4sure OGA-032 materials or network simulator review, maybe the failure possibility of your first test is very high.

Transfer Data Between Multi-homed Endpoints, An excellent example is the transmission of television pictures, Do you have questions or inquiries about our OGA-032 Exam Dumps?

So you can do your decision whether to choose OGA-032 exam dumps or not, Even if you have bought our ArchiMate 3 Part 2 Exam demo questions, you are still available to enjoy our online workers' service.

The Open Group New OGA-032 Exam Test: ArchiMate 3 Part 2 Exam & Latest The Open Group Certification Training

Our hard-working technicians and experts take candidates' OGA-032 future into consideration and pay attention to the development of our ArchiMate 3 Part 2 Exam training material, If you do not purchase Prep4sure OGA-032 materials or network simulator review, maybe the failure possibility of your first test is very high.
