

# C\_ABAPD\_2507 Relevant Answers - New C\_ABAPD\_2507 Test Online

If you opting for this C\_ABAPD\_2507 study engine, it will be a shear investment. We never boost our achievements, and all we have been doing is trying to become more effective and perfect as your first choice, and determine to help you pass the C\_ABAPD\_2507 preparation questions as efficient as possible. And our high-efficiency of the C\_ABAPD\_2507 Exam Braindumps is well known among our loyal customers. If you study with our C\_ABAPD\_2507 learning materials for 20 to 30 hours, then you will pass the exam easily.

## SAP C\_ABAPD\_2507 Exam Syllabus Topics:

| Topic   | Details                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|---------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Topic 1 | <ul style="list-style-type: none"><li>Core ABAP Programming: This section of the exam measures skills of SAP Application Programmers and covers foundational ABAP programming knowledge. Topics include modularization techniques, internal tables, control structures, and classical report programming. Mastery of these concepts is essential for building efficient ABAP applications.</li></ul>                                                          |
| Topic 2 | <ul style="list-style-type: none"><li>ABAP RESTful Application Programming Model: This section of the exam measures skills of SAP Application Programmers and covers the fundamentals of the ABAP RESTful Application Programming Model (RAP). It includes topics such as behavior definitions, service binding, and the use of managed and unmanaged scenarios. The focus is on building modern, scalable, and cloud-ready applications using RAP.</li></ul> |
| Topic 3 | <ul style="list-style-type: none"><li>ABAP Core Data Services and Data Modeling: This section of the exam measures skills of SAP ABAP Developers and covers the creation, definition, and use of Core Data Services (CDS) views for data modeling within SAP environments. Candidates are expected to understand annotations, data definitions, and the role of CDS in enabling advanced data processing and integration across SAP systems.</li></ul>        |
| Topic 4 | <ul style="list-style-type: none"><li>ABAP SQL and Code Pushdown: This section of the exam measures skills of SAP ABAP Developers and covers the use of advanced SQL techniques within ABAP. It includes code pushdown strategies that leverage database-level processing to enhance application performance. Key areas include Open SQL enhancements and integrating logic closer to the database.</li></ul>                                                 |
| Topic 5 | <ul style="list-style-type: none"><li>SAP Clean Core Extensibility and ABAP Cloud: This section of the exam measures skills of SAP Application Programmers and covers the clean core principles and extensibility options within SAP BTP. It also includes cloud-native ABAP development practices, emphasizing the creation of upgrade-stable and maintainable extensions aligned with SAP's cloud strategy.</li></ul>                                       |

**New C\_ABAPD\_2507 Test Online | Reliable C\_ABAPD\_2507 Exam Price**

If you really intend to pass the C\_ABAPD\_2507 exam, our software will provide you the fast and convenient learning and you will get the best study materials and get a very good preparation for the exam. The content of the C\_ABAPD\_2507 guide torrent is easy to be mastered and has simplified the important information. What's more, our C\_ABAPD\_2507 prep torrent conveys more important information with less questions and answers. The learning is relaxed and highly efficiently.

## SAP Certified Associate - Back-End Developer - ABAP Cloud Sample Questions (Q34-Q39):

### NEW QUESTION # 34

Which of the following are ABAP Cloud Development Model rules?

Note: There are 2 correct answers to this question.

- A. Build ABAP reports with either ABAP List Viewer (ALV) or SAP Fiori.
- B. Build ABAP RESTful application programming model-based services.
- C. Use public SAP APIs and SAP extension points.
- D. Reverse modifications when a suitable public SAP API becomes available.

**Answer: C,D**

Explanation:

Use public SAP APIs and SAP extension points. This rule ensures that the ABAP Cloud code is stable, reliable, and compatible with the SAP solutions and the cloud operations. Public SAP APIs and SAP extension points are the only allowed interfaces and objects to access the SAP platform and the SAP applications. They are documented, tested, and supported by SAP. They also guarantee the lifecycle stability and the upgradeability of the ABAP Cloud code1.

Build ABAP RESTful application programming model-based services. This rule ensures that the ABAP Cloud code follows the state-of-the-art development paradigm for building cloud-ready business services. The ABAP RESTful application programming model (RAP) is a framework that provides a consistent end-to-end programming model for creating, reading, updating, and deleting (CRUD) business data. RAP also supports draft handling, authorization checks, side effects, validations, and custom actions. RAP exposes the business services as OData services that can be consumed by SAP Fiori apps or other clients2.

### NEW QUESTION # 35

Which models must you use to develop artifacts that expose ABAP-based backend services based on semantic data models? (Select 2)

- A. ABAP Programming Model for SAP Fiori
- B. Cloud Application Programming Model
- C. ABAP Cloud Development Model
- D. ABAP RESTful Application Programming Model

**Answer: A,D**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

\* RAP defines the architecture for OData services based on CDS semantic data models and ABAP behavior-this is the current model.

\* The predecessor is the ABAP Programming Model for SAP Fiori (BOPF/CDS-based), which can be migrated into RAP; it also exposes ABAP backend logic via CDS semantics.

\* ABAP Cloud Development Model (B) is the rule set/contract (release contracts, checks), not the service-building model. CAP (C) targets Node.js/Java on BTP, not ABAP-based backend services.

### NEW QUESTION # 36

In RESTful Application Programming, a business object contains which parts? Note: There are 2 correct answers to this question.

- A. Authentication rules
- B. Behaviour definition
- C. Process definition
- D. CDS view

**Answer: B,D**

### NEW QUESTION # 37

Which function call returns 0?

- A. `find(val'FIND FOUND FOUNND' sub = 'F' )`
- B. `find(val'FIND Found found' sub 'F' occ = -2 CASE = abap_true )`
- C. `find(val'find Found FOUNDD' sub 'F' occ=-2 -2)`
- D. `find(val'find FOUND Foundd' sub 'F' occ = -2 CASE = abap_false )`

**Answer: A**

### NEW QUESTION # 38

Given the following code excerpt that defines an SAP HANA database table:

```
DEFINE TABLE demo_table
{
  KEY field1 : REFERENCE TO abap.clnt(3);
  KEY field2 : abap.char(1332);
  @Semantics.quantity.unitOfMeasure : 'demo_table.field4'
  field3 : abap.quan(2);
  field4 : abap.unit(2);
}
```

Which field is defined incorrectly?

- A. field3
- B. field4
- C. field1
- D. field2

**Answer: D**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Let's evaluate each field:

\* field1: Defined as REFERENCE TO abap.clnt(3) - this is correct. It follows standard definition for client fields.

\* field2: Defined as abap.char(1332) - this is incorrect. In ABAP CDS view entities, the maximum length for CHAR fields is limited to 1333 bytes total row size for all fields in a view or table. A single CHAR(1332) is almost the full limit and considered impractical or invalid in real implementations.

\* field3: Defined as abap.quan(2) - this is correct, representing a quantity field with 2 decimal places.

\* field4: Defined as abap.unit(2) - this is correct and compatible with the @Semantics.quantity.unitOfMeasure annotation used in field3.

Therefore, field2 is the invalid field due to its excessive length, likely breaching the allowable memory layout in the HANA table or violating SAP CDS limits.

Reference: ABAP CDS Development Guide, section 2.1 - Table definitions and ABAP type length constraints; SAP Help 3, page 6 - maximum lengths for data elements and supported annotations.

### NEW QUESTION # 39

.....

Applying the international recognition third party for payment for C\_ABAPD\_2507 exam cram, and if you choose us, your money and account safety can be guaranteed. And the third party will protect the interests of you. In addition, C\_ABAPD\_2507 learning materials are edited and verified by professional experts who possess the professional knowledge for the exam, and the quality can be guaranteed. We are pass guarantee and money back guarantee and if you fail to pass the exam, we will give you full refund. We provide free update for 365 days for C\_ABAPD\_2507 Exam Materials for you, so that you can know the latest information for the exam, and the update version will be sent to your email automatically.
