Perhaps you have also seen the related training tools about SAP certification C\_ACDET\_2506 exam on other websites, but our Pass4cram has a pivotal position in the field of IT certification exam. Pass4cram research materials can 100% guarantee you to pass

the exam. With Pass4cram your career will change and you can promote yourself successfully in the IT area. When you select Pass4cram you'll really know that you are ready to pass SAP Certification C\_ACDET\_2506 Exam. We not only can help you pass the exam successfully, but also will provide you with a year of free service.

## SAP C\_ACDET\_2506 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• <b>Project Overview, Roles and Responsibilities:</b> This section of the exam measures the skills of an SAP Cloud Consultant and covers the fundamental understanding of SAP Activate methodology within the context of a cloud implementation project. Candidates are expected to be familiar with the project lifecycle, including phases such as Prepare, Explore, Realize, Deploy, and Run. This part also focuses on identifying key roles and responsibilities within a cloud project team, ensuring clarity in collaboration between consultants, clients, and SAP. It checks whether the consultant understands governance, stakeholder management, and the high-level structure of cloud deployment using SAP best practices.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• <b>Field Configuration:</b> This domain evaluates the knowledge of an SAP Deployment Specialist and focuses on customizing and configuring business fields in the SAP system according to client-specific needs. This includes adjusting system settings for master data, transaction data, and other essential field-level controls to support business processes effectively. The section tests the candidate's ability to use configuration tools, apply SAP standard templates, and ensure that the field configurations align with the desired operational workflows of the business. It also touches upon validation, testing, and documenting the configuration changes made during the implementation.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>• <b>Deploy and Migration:</b> This part of the exam assesses the expertise of an SAP Deployment Specialist and focuses on the final deployment of the configured solution and the data migration process. Candidates should demonstrate a solid grasp of how to move configurations from a testing environment into production while minimizing disruption. It also includes knowledge of tools and strategies used for data extraction.</li></ul>

## SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite Sample Questions (Q49-Q54):

### NEW QUESTION # 49

Which of the following data elements must be manually loaded into the Production environment after full configuration migration is completed using the Intelligent Configuration Manager (ICM)? (Select 2 correct answers)

- **A. Relation and Relation Entries**
- B. Units of Measure
- **C. Enumerations**
- D. User to Group Mapping

**Answer: A,C**

Explanation:

After migrating configurations using ICM, Enumerations and Relation entries require manual loading into Production because they are not included in automatic migration bundles. Enumerations provide picklist values, while Relations define dependencies between fields. Units of Measure are typically part of standard configuration or migrated automatically. User to Group Mapping is managed separately through provisioning or identity management tools, not via ICM. Manual loading of these data elements ensures data integrity and avoids missing references.

### NEW QUESTION # 50

Custom partner bundles can be leveraged to share and apply baselines in which deployment scenario?

- **A. Greenfield**
- B. Brownfield
- C. Bluefield
- D. Grayfield

**Answer: A**

Explanation:

Custom partner bundles are predefined baseline configurations provided by SAP or implementation partners and are primarily used in Greenfield deployments, where a new SAP Ariba solution is being implemented from scratch. These bundles help accelerate deployment by applying standard best-practice settings and templates as a starting point in the Test environment.

In Bluefield or Brownfield deployments, which involve migration or upgrade of existing systems, incremental or selective configuration migration is more typical, and partner bundles are less relevant. Grayfield is not a recognized SAP Ariba deployment scenario.

Using partner bundles in Greenfield supports standardized setups and reduces manual configuration errors early in the project lifecycle, enabling faster time to value.

#### NEW QUESTION # 51

While working on editing a field for a customer, you notice that "Editable in full Contract Amendment" is not an option available in the advanced tab of field configuration. What is likely the cause for this behavior?

(Select 2 correct answers)

- A. The field you are customizing is standard and therefore cannot be changed.
- B. A customization is in flight and needs to be cleared and reset prior to making this change.
- C. The field you are customizing is not in the contract workspace or request classes.
- D. The contract must be in an amendment state for this option to be visible in customizing.

**Answer: C,D**

Explanation:

The "Editable in full Contract Amendment" option in SAP Ariba is available only when the contract is in an amendment status, meaning this option appears contextually when the contract supports amendment workflows. If the contract is not in amendment state, the option remains hidden (A).

Additionally, this option is only relevant for fields that belong to the Contract Workspace or Request field classes; fields outside these classes will not show amendment-specific editability options (C).

The presence or absence of this option is not related to ongoing customizations needing reset (B), nor is it restricted solely to custom or standard fields (D), as standard fields can also have this option if class-applicable.

#### NEW QUESTION # 52

Which of the following is NOT mentioned as a configuration type migrated by the Intelligent Configuration Manager?

- A. Template - project templates such as Contract templates
- B. SupplierContact - contacts for the suppliers
- C. DynamicForm - custom form templates (dForms)
- D. AMLExtension - AML customizations such as custom fields

**Answer: B**

Explanation:

The Intelligent Configuration Manager (ICM) migrates configuration types such as DynamicForms (dForms), AML Extensions (custom fields and enumerations), and Templates (contract or project templates). However, SupplierContact data, which is master or transactional data, is not migrated through ICM because ICM focuses on configuration migration, not operational or transactional data. Supplier contact information is managed separately and must be migrated using appropriate master data processes.

#### NEW QUESTION # 53

You need to revise a published form template.

What steps do you follow?

- A. Clone and change ID
- B. Edit directly in production
- C. Create a new version, edit, test, and publish
- D. Delete and recreate

**Answer: C**

## NEW QUESTION # 54

.....

Both practice exams (web-based & desktop) give a SAP C\_ACDET\_2506 real exam feeling and identify your mistakes so you can overcome your weaknesses before the C\_ACDET\_2506 final test. The desktop SAP C\_ACDET\_2506 Practice Test software works on Windows after software installation.
