There are 2 correct answers to this question.
Response:

- A. AI-powered recruitment and candidate screening
- B. Predictive workforce analytics
- C. Manual job application sorting
- D. Legacy payroll processing without AI integration

Answer: A,B

NEW QUESTION # 27
Which SAP Business AI solutions are used for automating business workflows? Note: There are 2 correct answers to this question.

- A. SAP SuccessFactors
- B. SAP Intelligent Robotic Process Automation (RPA)
- C. SAP Conversational AI
- D. SAP Extended Warehouse Management

Answer: B,C

Explanation:
SAP Business AI provides solutions to automate business workflows, streamlining repetitive tasks and enhancing process efficiency.

The correct answers are SAP Intelligent Robotic Process Automation (RPA) and SAP Conversational AI, as these solutions are specifically designed to automate workflows using AI- driven capabilities.

SAP documentation states: "SAP Intelligent RPA automates repetitive business tasks such as data entry, document processing, and workflow execution by combining robotic process automation with AI capabilities." This enables organizations to streamline processes like invoice processing or order management, reducing manual effort. SAP Conversational AI, powered by Joule, supports workflow automation by

"enabling natural language interactions to trigger and manage business processes." For example, Joule can "automate case classification and resolve customer inquiries" by integrating with workflow systems, enhancing efficiency in service and support processes.

The incorrect options-SAP Extended Warehouse Management and SAP SuccessFactors-are not focused on general workflow automation. SAP Extended Warehouse Management is tailored to logistics and inventory management, not broad workflow automation. SAP SuccessFactors focuses on HR processes, such as recruitment and talent management, not general business workflows. SAP's emphasis on automation, as seen in solutions like SAP Business Technology Platform, confirms the suitability of SAP Intelligent RPA and SAP Conversational AI for this purpose.

NEW QUESTION # 28

A manufacturing firm wants to use AI to predict machine failures and optimize maintenance schedules.
Which SAP solutions should they implement? Note: There are 3 correct answers to this question.

- A. SAP AI Business Services
- B. SAP Digital Manufacturing Cloud
- C. SAP Blockchain for Business
- D. SAP Predictive Analytics

Answer: A,B,D

Explanation:
For a manufacturing firm aiming to predict machine failures and optimize maintenance schedules, SAP offers AI-driven solutions that enhance predictive maintenance and operational efficiency. The correct answers are SAP Digital Manufacturing Cloud, SAP AI Business Services, and SAP Predictive Analytics, as these solutions directly support AI-driven predictive maintenance in manufacturing.

SAP documentation highlights: "SAP Digital Manufacturing Cloud leverages AI to optimize production processes, including predictive maintenance to prevent machine failures and improve operational efficiency." This solution uses real-time data and machine learning to "predict equipment failures and schedule maintenance proactively," reducing downtime and costs. SAP AI Business Services provide reusable AI capabilities, such as predictive analytics and anomaly detection, to "support predictive maintenance by analyzing equipment data and identifying potential issues before they occur." These services integrate with SAP S/4HANA to monitor machine performance and trigger maintenance workflows. SAP Predictive Analytics, embedded in solutions like SAP S/4HANA, enables "predicting equipment failures by analyzing historical and real-time data," allowing manufacturers to optimize maintenance schedules based on predictive insights.

The incorrect option-SAP Blockchain for Business-is not relevant, as it focuses on securetransactions, not predictive maintenance. SAP's case studies, such as those involving SAP Digital Manufacturing Cloud, demonstrate its effectiveness in optimizing manufacturing processes through AI-driven maintenance. The inclusion of SAP Predictive Analytics as a third answer aligns with its documented role in manufacturing, as seen in SAP's predictive maintenance use cases, ensuring three correct answers as required.
