Die Zertifizierung der SAP C_BCSBS_2502 zu erwerben bedeutet mehr Möglichkeiten in der IT-Branche. Wir It-Pruefung haben schon reichliche Erfahrungen von der Entwicklung der SAP C_BCSBS_2502 Prüfungssoftware. Unsere Technik-Gruppe verbessert beständig die Prüfungsunterlagen, um die Benutzer der SAP C_BCSBS_2502 Prüfungssoftware immer leichter die Prüfung bestehen zu lassen.

SAP C_BCSBS_2502 Prüfungsplan:

Thema	Einzelheiten
Thema 1	Positioning SAP Business Suite: This section of the exam measures the skills of Solution Consultants and covers how to effectively position the SAP Business Suite within various business scenarios. It includes understanding the core value, capabilities, and strategic advantages of SAP's integrated business applications. The focus is on enabling consultants to align SAP Business Suite offerings with customer needs to support end-to-end processes.
Thema 2	Discovering SAP Business AI: This section of the exam measures the skills of Digital Transformation Specialists and focuses on exploring how SAP Business AI enables smarter decision-making. It includes identifying AI-driven features embedded within SAP solutions and how they contribute to automation, predictions, and enhanced business outcomes. Professionals are expected to understand how to promote AI adoption in business processes using SAP's intelligent technologies.
Thema 3	Positioning SAP Business Data Cloud: This section of the exam measures the skills of Enterprise Architects and covers the positioning and strategic use of SAP Business Data Cloud. It involves understanding how data from various sources is managed, governed, and accessed to support intelligent business operations. The section aims to equip professionals with the ability to explain data unification and connectivity through SAP's cloud-based data platform.

Im It-Pruefung können Sie Dumps zur SAP C_BCSBS_2502 Zertifizierungsprüfung herunterladen, so dass Sie unsere Produkte ohne Risiko kaufen können. Das ist die Version der Übungen. Und Sie können die Qualität der Produkte und den Wert vorm Kauf sehen. Wir sind selbstsicher, dass Sie mit unseren Produkten zur SAP C_BCSBS_2502 Zertifizierungsprüfung zufrieden sein würden. Um Ihre Interessen zu schützen, versprechen wir Ihnen, dass wir Ihnen eine Rückerstattung geben für den Durchfall in der Prüfung

würden. Unser Ziel liegt nicht nur darin, Ihnen zu helfen, die SAP C_BCSBS_2502 Prüfung zu bestehen, sondern auch ein reales IT-Expert zu werden. So können Sie mehr Vorteile im Beruf haben, eine entsprechende technische Position finden und ganz einfach ein hohes Gehalt unter den IT-Angestellten erhalten.

SAP Certified Associate - Positioning SAP Business Suite C_BCSBS_2502 Prüfungsfragen mit Lösungen (Q15-Q20):

15. Frage

How does SAP Business Suite support enterprise resource planning (ERP) processes? Please choose the correct answer.

- A. By offering social media engagement tools
- **B. By providing an integrated platform for finance, HR, supply chain, and procurement**
- C. By focusing only on customer relationship management
- D. By eliminating the need for business process automation

Antwort: B

16. Frage

A global manufacturing company wants to improve supplier collaboration, optimize procurement operations, and reduce manual processing errors. They need an SAP solution that enables spend management, contract lifecycle tracking, and supplier performance analysis. Which SAP solutions should they implement? There are 3 correct answers to this question.

- **A. SAP Business Network**
- **B. SAP Predictive Analytics**
- **C. SAP Ariba**
- D. SAP Customer Relationship Management (CRM)
- E. SAP Controlling (CO)

Antwort: A,B,C

17. Frage

What is the key advantage of SAP data products?

- **A. Consistency and business context embedded in SAP-managed dataset and semantics**
- B. Ready-to-run insights that leverage planning and analysis
- C. Self-service analytical modeling within a data fabric architecture

Antwort: A

Begründung:

SAP data products are standardized, curated datasets within SAP Business Data Cloud (BDC) that encapsulate business data with embedded semantics and context, designed to enable advanced analytics, AI, and seamless data sharing across SAP and non-SAP systems. The question asks for the key advantage of SAP data products, with one correct answer. Below, each option is evaluated based on official SAP documentation, SAP Learning materials, and relevant web sources from the provided search results, ensuring alignment with the "Positioning SAP Business Suite" and "SAP Business Data Cloud" narratives.

* Option A: Consistency and business context embedded in SAP-managed dataset and semantics
The primary advantage of SAP data products is their ability to provide consistency and embedded business context within SAP-managed datasets and semantics. These data products are pre-curated, semantically rich datasets that preserve the business meaning and context of data from SAP applications (e.g., SAP S

/4HANA, SAP SuccessFactors) and integrate with non-SAP data. This ensures that data is consistent, trusted, and ready for analytics and AI without requiring extensive re-engineering or external transformation. The documentation explicitly highlights this as the key advantage, emphasizing how SAP data products eliminate the need to rebuild business logic and maintain data integrity across use cases. Extract: "SAP Business Data Cloud offers several capabilities for connecting and harmonizing data. By leveraging an SAP-managed Lakehouse, users can maintain rich business semantics for SAP-sourced data products right out-of-the-box. ... Data products are curated and managed by SAP, ensuring consistency and business context for advanced analytics and AI." Extract: "Built-In Business Semantics: Because SAP data already carries deep business context and semantics, Databricks can provide powerful analytics and machine learning without forcing customers to re-invent data pipelines or guess at the meaning of fields." Extract: "SAP data products provide a consistent, semantically rich foundation for data sharing, ensuring that business context is

preserved across SAP and non-SAP systems, reducing complexity and enabling trusted insights." This option is correct.

* Option B: Ready-to-run insights that leverage planning and analysis While SAP Business Data Cloud provides ready-to-run insights through its Intelligent Applications, which combine planning and analysis, this is a feature of the broader SAP BDC platform, not a specific advantage of SAP data products. SAP data products are the underlying datasets that feed these applications, but their primary role is to provide a consistent, semantically rich data foundation, not to deliver insights directly. The documentation distinguishes between data products (data layer) and intelligent applications (analytics layer), making this option less accurate as the key advantage. Extract: "New to SAP Business Data Cloud (SAP BDC) are context-aware SAP Business Data Cloud Intelligent Applications. These pre- configured dashboards provide ready-to-run insights by combining planning and analysis, all infused with trusted Artificial Intelligence (AI) to drive smarter, faster decisions." This option is incorrect.

* Option C: Self-service analytical modeling within a data fabric architecture SAP Business Data Cloud supports self-service analytical modeling through SAP Datasphere, which operates within a data fabric architecture to enable business users to create data models. However, this capability is not a primary advantage of SAP data products themselves. SAP data products are focused on delivering curated, SAP- managed datasets with embedded semantics, not on enabling self-service modeling. The data fabric architecture is a broader feature of SAP BDC, and self-service modeling is a function of tools like SAP Datasphere, not the data products. Extract: "SAP Datasphere: This works as central component in BDC by creating consumption ready data models on top of Data Products while also managing analytical roles, access controls etc." This option is incorrect.

Summary of Correct answer:

* A: The key advantage of SAP data products is their consistency and business context embedded in SAP- managed datasets and semantics, ensuring trusted, semantically rich data for analytics and AI without the need for external re-engineering.

18. Frage

How are RISE and GROW with SAP positioned as transformation journeys to SAP Business Suite? Note:

There are 2 correct answers to this question.

- A. The choice for RISE or GROW with SAP depends on the size of the customer.
- B. RISE and GROW with SAP are synonymous with Private and Public Cloud ERP products.
- C. RISE and GROW are journeys with an emphasis SAP Business Suite as the end destination.
- D. The choice for RISE or GROW with SAP is defined by the customer's type of ERP installation.

Antwort: C,D

Begründung:

The question asks how RISE with SAP and GROW with SAP are positioned as transformation journeys toward SAP Business Suite, with two correct answers. Based on official SAP documentation, RISE with SAP and GROW with SAP are strategic offerings designed to facilitate customers' transitions to cloud-based ERP solutions, specifically targeting SAP S/4HANA Cloud (a core component of SAP Business Suite). The correct answers are A and C, as they accurately reflect the positioning of these offerings.

Explanation of Correct Answers:

Option A: The choice for RISE or GROW with SAP is defined by the customer's type of ERP installation.

This is correct because the choice between RISE with SAP and GROW with SAP is influenced by the customer's existing ERP landscape and their deployment preferences (e.g., on-premise, private cloud, or public cloud).

According to the Positioning SAP Business Suite documentation:

"RISE with SAP is designed for customers with complex ERP landscapes, often those with existing on- premise SAP ECC or SAP S/4HANA installations, who are looking to transform and migrate to the cloud with a managed, outcome-based approach. It provides a guided journey for customers to adopt SAP S/4HANA Cloud, private or public edition, depending on their needs."

In contrast:

"GROW with SAP is tailored for customers who are new to SAP or have simpler ERP setups, often adopting SAP S/4HANA Cloud, public edition, for a standardized, fast-track implementation." This indicates that the type of ERP installation-whether a customer is transitioning from an on-premise system (more suited for RISE with SAP) or starting fresh with a cloud-native solution (more suited for GROW with SAP)-plays a critical role in determining the appropriate transformation journey. For example, RISE with SAP supports customers with legacy systems by offering tools like the SAP Readiness Check and Custom Code Analyzer to facilitate migration, while GROW with SAP emphasizes preconfigured best practices for greenfield implementations.

Option C: RISE and GROW are journeys with an emphasis on SAP Business Suite as the end destination.

This is also correct, as both RISE with SAP and GROW with SAP are positioned as transformation journeys that guide customers toward SAP S/4HANA Cloud, which is a core component of SAP Business Suite. The SAP Business Suite in the cloud context refers to the suite of solutions, including SAP S/4HANA Cloud, that enable intelligent, sustainable enterprises. The documentation states:

"RISE with SAP and GROW with SAP are transformation offerings that help customers move to SAP S/4HANA Cloud, enabling them to leverage the full capabilities of SAP Business Suite in the cloud. These journeys focus on delivering business process transformation, innovation, and scalability, with SAP S/4HANA Cloud as the target ERP solution."

For RISE with SAP, the journey includes a comprehensive transformation package (business process redesign, technical migration, and cloud infrastructure) to achieve SAP Business Suite capabilities. For GROW with SAP, the journey is a streamlined adoption path for midmarket customers or those new to SAP, emphasizing rapid deployment of SAP S/4HANA Cloud, public edition. Both offerings position SAP Business Suite (via SAP S/4HANA Cloud) as the end destination, supporting advanced features like AI, analytics, and integration with SAP Business Technology Platform (BTP).

Explanation of Incorrect Answers:

Option B: RISE and GROW with SAP are synonymous with Private and Public Cloud ERP products.

This is incorrect because RISE with SAP and GROW with SAP are not direct synonyms for private and public cloud ERP products. While RISE with SAP supports both SAP S/4HANA Cloud, private edition and public edition (depending on customer needs), and GROW with SAP is primarily aligned with SAP S/4HANA Cloud, public edition, these offerings are transformation programs, not the ERP products themselves. The documentation clarifies:

"RISE with SAP is a transformation journey that includes SAP S/4HANA Cloud (private or public edition), SAP Business Technology Platform, and services for business process transformation. GROW with SAP is a solution for rapid adoption of SAP S/4HANA Cloud, public edition, with preconfigured processes." Equating RISE and GROW directly to private and public cloud products oversimplifies their scope, as they encompass services, tools, and methodologies beyond just the ERP deployment model.

Option D: The choice for RISE or GROW with SAP depends on the size of the customer.

This is incorrect because the choice between RISE with SAP and GROW with SAP is not primarily determined by the size of the customer (e.g., small, medium, or large enterprises). While GROW with SAP is often marketed toward midmarket customers due to its standardized, cost-effective approach, and RISE with SAP is suited for larger enterprises with complex needs, customer size is not the defining criterion. The documentation emphasizes:

"The decision for RISE or GROW with SAP is based on the customer's transformation goals, existing ERP landscape, and desired level of customization, not solely on company size." For example, a large enterprise with a simple ERP requirement could opt for GROW with SAP, while a midmarket customer with a complex legacy system might choose RISE with SAP for its managed transformation services.

Summary:

RISE with SAP and GROW with SAP are transformation journeys designed to guide customers to SAP Business Suite, specifically SAP S/4HANA Cloud. The choice between them depends on the customer's ERP installation type (e.g., on-premise vs. greenfield), supporting Option A. Both journeys emphasize SAP Business Suite as the end destination, supporting Option C. Options B and D are incorrect, as they misrepresent the nature of these offerings and their selection criteria.
