C_BW4H_2404 Exam Torrent - SAP Certified Associate - Data Engineer - Data Fabric Prep Torrent & C_BW4H_2404 Test Guide

As we all know, if you want to pass the C_BW4H_2404 exam, you need to have the right method of study, plenty of preparation time, and targeted test materials. However, most people do not have one or all of these. That is why I want to introduce our C_BW4H_2404 Original Questions to you. So why not try our SAP original questions, which will help you maximize your pass rate? Even if you unfortunately fail to pass the exam, we will give you a full refund.

SAP Certified Associate - Data Engineer - Data Fabric Sample Questions

(Q21-Q26):

NEW QUESTION # 21

You would like to highlight the deviation from predefined threshold values for a key figure visualize it in SAP Analysis for Microsoft Office. Which BW query feature do you use?

- A. Condition
- B. Key figure property
- C. Formula cell
- D. **Exception**

Answer: D

NEW QUESTION # 22

Which SAP BW/4HANA objects support the feature of generating an external SAP HANA View? Note: There are 2 correct answers to this question.

- A. Open ODS view
- B. **Composite Provider**
- C. **BW query**
- D. Semantic group object

Answer: B,C

Explanation:

* BW Query (Answer A):

* Queries created in SAP BW/4HANA can generate external SAP HANA Views for consumption in tools like SAP Analytics Cloud or third-party applications.

* Composite Provider (Answer C):

* Composite Providers combine multiple data sources and can generate SAP HANA Calculation Views for integration and analytics purposes.

* Open ODS View (Option B): Open ODS views expose data directly but don't generate external HANA Views.

* Semantic Group Object (Option D): This is not involved in generating external views.

Incorrect Options: References:

* SAP BW/4HANA Modeling Guide

* SAP HANA View Integration Documentation

NEW QUESTION # 23

InfoObject "CITY" is defined as a display attribute for InfoObject "CUSTOMER" InfoObject "COUNTRY" is defined as a display attribute for InfoObject "CITY". In a master data report you want to display the "COUNTRY" of a "CUSTOMER".

Which options do you have to realize this scenario? Note: There are 3 correct answers to this question.

- A. **Combine "CUSTOMER" "CITY" "COUNTRY" in a Composite Provider using a sequence of left outer join operators.**
- B. **Generate external views for "CUSTOMER" "CITY" "COUNTRY" join them in another calculation view.**
- C. **Include "CUSTOMER" to the rows in the BW Query on "CUSTOMER" activate the Universal Display Hierarchy setting.**
- D. **Add "COUNTRY" as a transitive attribute for "CUSTOMER" in InfoObject definition.**
- E. **Combine "CUSTOMER" "CITY" "COUNTRY" in an Open ODS View using a sequence of associations.**

Answer: A,B,E

Explanation:

B. Generate external views:

* External views allow joining master data and transactional data in SAP HANA Calculation Views for flexible reporting.

C. Composite Provider with left outer joins:

* Composite Providers allow combining data using joins, providing a flexible virtual data mart structure.

E. Open ODS View with associations:

* Open ODS Views enable flexible modeling using associations between different master data entities.

References:SAP BW/4HANA modeling and reporting documentation (SAP Help Portal).

NEW QUESTION # 24

What are the benefits of separating master data from transactional data in SAP BW/4HANA? Note: There are 3 correct answers to this question.

- A. Reducing the number of database tables
- B. Avoiding generation of SID values
- C. **Allowing different data load frequency**
- D. **Providing language-dependent master data texts**
- E. **Ensuring referential integrity of your transactional data**

Answer: C,D,E

Explanation:

In SAP BW/4HANA, separating master data from transactional data is a fundamental design principle that provides numerous benefits for data management, reporting, and system performance. Below is an explanation of the correct answers and why they are valid.

* B. Allowing different data load frequency

* Master data (e.g., customer names, product descriptions) typically changes less frequently than transactional data (e.g., sales orders, invoices). By separating these two types of data, you can schedule independent data loads for each.

* For example, master data might be updated weekly or monthly, while transactional data could be loaded daily or even in real-time. This separation ensures efficient data management and reduces unnecessary processing overhead.

NEW QUESTION # 25

You use InfoObject B as a display attribute for InfoObject A.

Which object properties prevent you from changing InfoObject B into a navigational attribute for InfoObject A? Note: There are 3 correct answers to this question."

- A. InfoObject B is defined as a Key Figure.
- B. **Attribute Only is set in InfoObject B**
- C. Data Type "Character String" is set in InfoObject A
- D. **Conversion Routine "ALPHA" is set in InfoObject A**
- E. **High Cardinality is set in InfoObject B**

Answer: B,D,E

Explanation:

* A. High Cardinality is set in InfoObject B: This is an object property that prevents you from changing InfoObject B into a navigational attribute for InfoObject A.

A characteristic with high cardinality cannot be used as a navigation attribute for another characteristic, and therefore it cannot have navigation attributes itself.¹

* B. Attribute Only is set in InfoObject B: This is an object property that prevents you from changing InfoObject B into a navigational attribute for InfoObject A.

A characteristic that is marked as an exclusive attribute can only be used as a display attribute for another characteristic, but not as a navigational attribute. In addition, the characteristic cannot be transferred into InfoCubes.²

* D. Conversion Routine "ALPHA" is set in InfoObject A: This is an object property that prevents you from changing InfoObject B into a navigational attribute for InfoObject A.

A characteristic that has a conversion routine cannot have navigational attributes, because the conversion routine would have to be applied to the navigational attributes as well, which is not possible.³
