

C_BW4H_2505 Questions Pdf - C_BW4H_2505 Testdump

NOTE: Each correct selection is worth one point.

Required secrets:

Certificate
Personal access token
Shared Access Authorization token
Username and password

Storage location:

Azure Data Lake
Azure Key Vault
Azure Storage with HTTP access
Azure Storage with HTTPS access

Answer:

Required secrets:

Certificate
Personal access token
Shared Access Authorization token
Username and password

Storage location:

Azure Data Lake
Azure Key Vault
Azure Storage with HTTP access
Azure Storage with HTTPS access

Explanation:

Every request made against a storage service must be authorized, unless the request is for a blob or container resource that has been made available for public or signed access. One option for authorizing a request is by using Shared Key.

Scenario: The mobile applications must be able to call the share pricing service of the existing retirement fund management system. Until the system is upgraded, the service will only support basic authentication over HTTPS.

The investment planning applications suite will include one multi-tier web application and two iOS mobile application. One mobile application will be used by employees; the other will be used by customers.

Reference: <https://docs.microsoft.com/en-us/rest/api/storageservices/authorize-with-shared-key>

Question: 3

Our C_BW4H_2505 exam questions are so popular among the candidates not only because that the quality of the C_BW4H_2505 study braidumps is the best in the market. But also because that our after-sales service can be the most attractive project in our C_BW4H_2505 Preparation questions. We have free online service which means that if you have any trouble, we can provide help for you remotely in the shortest time. And we will give you the best advices on the C_BW4H_2505 practice engine.

Get benefits from GuideTorrent exam questions update offer and prepare well with the assistance of SAP C_BW4H_2505 updated exam questions. The SAP C_BW4H_2505 exam dumps are being offered at affordable charges. We guarantee you that the C_BW4H_2505 Exam Dumps prices are entirely affordable for every C_BW4H_2505 exam candidate.

100% Pass Quiz C_BW4H_2505 - SAP Certified Associate - Data Engineer - SAP BW/4HANA High Hit-Rate Questions Pdf

GuideTorrent offers latest braindumps pdf, braindumps sheet and braindumps questions. Real SAP Certified Associate - Data Engineer - SAP BW/4HANA C_BW4H_2505 Exams can help customers success in their career. SAP with best SAP Certified Associate - Data Engineer - SAP BW/4HANA study material help customers pass the SAP Certified Associate - Data Engineer - SAP BW/4HANA C_BW4H_2505 test. And the SAP Certified Associate - Data Engineer - SAP BW/4HANA C_BW4H_2505 price is affordable. With 365 days updates.

SAP C_BW4H_2505 Exam Syllabus Topics:

Topic	Details
Topic 1	• SAP BW • 4HANA Data Flow: This section of the exam measures the practical ability of SAP Consultants to load data within the SAP BW • 4HANA environment. It assesses familiarity with data movement and transformation processes across different layers of the system.
Topic 2	• Data Acquisition into SAP HANA: This section evaluates the capacity of SAP Consultants to integrate various data sources into SAP HANA. It assesses their ability to understand different ingestion techniques and ensure data accessibility for processing.
Topic 3	• SAP BW • 4HANA Project and the Modeling Process: This section of the exam assesses how Data Engineers guide and contribute to SAP BW • 4HANA projects. It includes knowledge of modeling workflows, project lifecycle stages, and collaboration strategies within project teams.
Topic 4	• SAP Analytics Tools and SAP Analytics Cloud: This section evaluates the skills of SAP Consultants in using tools like SAP Analytics Cloud, Lumira, and Analysis for Office to visualize and interpret data. It focuses on the consultant's ability to apply business intelligence tools within the SAP ecosystem.
Topic 5	• Fundamentals: This section of the exam measures the foundational understanding of SAP Consultants and covers essential terms and concepts related to SAP BW • 4HANA and SAP Business Data Cloud. It focuses on the core framework and architecture necessary to navigate and work with these platforms.
Topic 6	• SAP BW • 4HANA Modeling: This section targets the skills of Data Engineers in selecting appropriate modeling options and applying best practices like LSA++ within SAP BW • 4HANA. It focuses on designing scalable, high-performing data models.
Topic 7	• Native SAP HANA Modeling: This section evaluates the ability of SAP Consultants to describe and apply native modeling options in SAP HANA. It emphasizes understanding how to build optimized data structures directly within the HANA platform.

SAP Certified Associate - Data Engineer - SAP BW/4HANA Sample Questions (Q54-Q59):

NEW QUESTION # 54

Which tasks are part of the Business Blueprint phase in an SAP BW/4HANA project? Note: There are 2 correct answers to this question.

- A. Activate SAP business content objects that comply with the layered scalable architecture (LSA++) architecture
- B. Analyze key performance indicators of the business processes
- C. Associate an InfoObject to a field in an Open ODS view
- D. Collect central individual information requirements

Answer: B,D

NEW QUESTION # 55

You have an existing field-based data flow that follows the layered scalable architecture (LSA++) concept. To meet a new urgent business requirement for field you want to leverage a hierarchy of an existing characteristic without changing the transformation. How can you achieve this? Note: There are 2 correct answers to this question.

- A. Associate the field with the characteristic in the CompositeProvider
- B. Assign hierarchy properties to the field in the BW Query
- C. Associate the field with the characteristic in the Open ODS View
- D. Add the characteristic to the DataStore object (advanced)

Answer: A,C

NEW QUESTION # 56

Which development object needs to be built to generate an HDI Container?

- A. SQL script procedure
- B. Space
- C. HDB module
- D. Package

Answer: C

Explanation:

In the context of SAP HANA Deployment Infrastructure (HDI), an HDI Container is a dedicated, isolated schema in the SAP HANA database that stores and manages database objects such as tables, views, procedures, and other artifacts. HDI Containers are used to support multi-target applications (MTAs) and enable developers to manage database objects in a structured and modular way.

* HDB Module (B): An HDB module is a development object within the SAP Web IDE for SAP HANA or SAP Business Application Studio. It contains the database design-time artifacts (e.g., hdbtable, hdbview, hdbsynonym) that define the structure and logic of the database objects.

When you build an HDB module, it triggers the creation of an HDI Container if one does not already exist. The HDI Container is then populated with the runtime objects generated from the design-time artifacts defined in the HDB module.

* Key Points:

* The HDB module is part of a Multi-Target Application (MTA) project.

* It uses the HDI Deployer service to deploy the design-time artifacts into the HDI Container.

* The HDI Container ensures isolation and versioning of database objects, making it suitable for modern application development practices.

* Why Not the Other Options?

* Space (A): A space is a concept in Cloud Foundry environments where applications and services are deployed. While spaces are used to organize and isolate resources, they are not directly related to generating an HDI Container. Spaces host applications and services but do not define the database objects required for an HDI Container.

* Package (C): In SAP HANA, a package is a folder-like structure used to organize development objects in the SAP HANA repository. However, packages alone do not generate HDI Containers.

They are used in the classic repository-based development model (XSA or XS Classic), whereas HDI Containers are associated with the newer HDI-based development model.

* SQL Script Procedure (D): An SQL script procedure is a database artifact used to define procedural logic in SQL. While SQL script procedures can be deployed into an HDI Container, they are not responsible for generating the container itself. The container must already exist before deploying such artifacts.

Development Object Required to Generate an HDI Container:

SAP Data Engineer - Data Fabric Context: In the SAP Data Engineer - Data Fabric landscape, HDI Containers play a crucial role in enabling modular and scalable data management. They allow developers to create isolated environments for different applications or tenants, ensuring data security and consistency. By leveraging HDB modules, developers can define and deploy database objects in a structured manner, aligning with modern DevOps practices.

For more information, refer to the following resources:

* SAP HANA Developer Guide for SAP HANA XS Advanced: Explains the role of HDB modules and HDI Containers in application development.

* SAP Business Application Studio Documentation: Provides guidance on creating and building HDB modules in the context of MTAs.

* SAP Learning Hub: Offers training on SAP HANA development, including HDI and MTA concepts.

By selecting B (HDB module), you ensure that the correct development object is identified for generating an HDI Container, enabling efficient database development and deployment.

NEW QUESTION # 57

The behavior of a modeled dataflow depends on:

- *The DataSource with its Delta Management method
- *The type of the DataStore object (advanced) used as a target
- *The update method of the key figures in the transformation.

Which of the following combinations provides consistent information for the target? Note: There are 3 correct answers to this question.

- A. *DataSource with Delta Management method AIE
*DataStore Object (advanced) type Data Mart
*Update method Summation
- B. *DataSource with Delta Management method ADD
*DataStore Object (advanced) type Stard
*Update method Move
- C. *DataSource with Delta Management method ABR
*DataStore Object (advanced) type Stard
*Update method Move
- D. *DataSource with Delta Management method ABR
*DataStore Object (advanced) type Stard
*Update method Summation
- E. *DataSource with Delta Management method ABR
*DataStore Object (advanced) type Data Mart
*Update method Summation

Answer: C,D,E

Explanation:

The behavior of a modeled dataflow in SAP BW/4HANA depends on several factors, including the Delta Management method of the DataSource, the type of DataStore object (advanced) used as the target, and the update method applied to key figures in the transformation. To ensure consistent and accurate information in the target, these components must align correctly.

* Option B:

* DataSource with Delta Management method ABR: The ABR (After Image + Before Image) method tracks both the before and after states of changed records. This is ideal for scenarios where updates need to be accurately reflected in the target system.

* DataStore Object (advanced) type Stard: A Staging and Reporting DataStore Object (Stard) is designed for staging data and enabling reporting simultaneously. It supports detailed tracking of changes, making it compatible with ABR.

* Update method Summation: The summation update method aggregates key figures by adding new values to existing ones. This is suitable for ABR because it ensures that updates are accurately reflected without overwriting previous data.

* Option C:

* DataSource with Delta Management method ABR: As explained above, ABR is ideal for tracking changes.

* DataStore Object (advanced) type Stard: Stard supports detailed tracking of changes, making it compatible with ABR.

* Update method Move: The move update method overwrites existing key figure values with new ones. This is also valid for ABR because it ensures that the latest state of the data is reflected in the target.

* Option D:

* DataSource with Delta Management method ABR: ABR ensures accurate tracking of changes.

* DataStore Object (advanced) type Data Mart: A Data Mart DataStore Object is optimized for reporting and analytics. It can handle aggregated data effectively, making it compatible with ABR.

* Update method Summation: Summation is appropriate for aggregating key figures in a Data Mart, ensuring consistent and accurate results.

Correct Combinations:

* Option A:

* DataSource with Delta Management method ADD: The ADD method only tracks new records (inserts) and does not handle updates or deletions. This makes it incompatible with Stard and summation/move update methods, which require full change tracking.

* DataStore Object (advanced) type Stard: Stard requires detailed change tracking, which ADD cannot provide.

* Update method Move: Move is not suitable for ADD because it assumes updates or changes to existing data.

* Option E:

* DataSource with Delta Management method AIE: The AIE (After Image Enhanced) method tracks only the after state of changed records. While it supports some scenarios, it is less comprehensive than ABR and may lead to inconsistencies in certain combinations.

* DataStore Object (advanced) type Data Mart: Data Mart objects require accurate aggregation, which AIE may not fully support.

* Update method Summation: Summation may not work reliably with AIE due to incomplete change tracking.

Incorrect Options:

SAP Data Engineer - Data Fabric Context: In the context of SAP Data Engineer - Data Fabric, ensuring consistent and accurate dataflows is critical for building reliable data pipelines. The combination of Delta Management methods, DataStore object types, and update methods must align to meet specific business requirements. For example:

* Stordata objects are often used for staging and operational reporting, requiring detailed change tracking.

* Data Mart objects are used for analytics, requiring aggregated and consistent data.

For further details, refer to:

* SAP BW/4HANA Data Modeling Guide: Explains Delta Management methods and their compatibility with DataStore objects.

* SAP Learning Hub: Offers training on designing and implementing dataflows in SAP BW/4HANA.

By selecting B, C, and D, you ensure that the combinations provide consistent and accurate information for the target.

NEW QUESTION # 58

Which layer of the layered scalable architecture (LSA++) of SAP BW/4HANA is designed as the main storage for harmonized consistent data?

- A. Data Acquisition layer
- B. Open Operational Data Store layer
- C. Virtual Data Mart layer
- D. Flexible Enterprise Data Warehouse Core layer

Answer: D

NEW QUESTION # 59

.....

With the increasing marketization, the product experience marketing has been praised by the consumer market and the industry. Attract users interested in product marketing to know just the first step, the most important is to be designed to allow the user to try before buying the C_BW4H_2505 study materials, so we provide free pre-sale experience to help users to better understand our products. The user only needs to submit his E-mail address and apply for free trial online, and our system will soon send free demonstration research materials of C_BW4H_2505 Study Materials to download.
