# C_CPI_2506 Customizable Exam Mode & Study C_CPI_2506 Plan

Generally speaking, C_CPI_2506 certification has become one of the most authoritative voices speaking to us today. Let us make our life easier by learning to choose the proper C_CPI_2506 test answers, pass the exam, obtain the certification, and be the master of your own life, not its salve. There are so many of them that they make you believe that their product is what you are looking for. With one type of C_CPI_2506 Exam study materials are often shown one after another so that you are confused as to which product you should choose.

## SAP C_CPI_2506 Exam Syllabus Topics:

| Topic | Details |
|---|---|
| Topic 1 | • Implementing Cloud Integration: This section of the exam measures the skills of Integration Consultants and examines how cloud integration flows are designed and deployed. It emphasizes creating integration scenarios, handling connectivity, and applying best practices to build efficient, secure, and reliable integration processes in SAP's cloud environment. |
| Topic 2 | • Managing APIs: This section of the exam measures the skills of Solution Architects and focuses on managing APIs within the SAP ecosystem. It covers topics such as API provisioning, lifecycle management, security policies, and monitoring, ensuring candidates can handle APIs effectively for enterprise integration needs. |
| Topic 3 | • SAP Event Mesh: This section of the exam measures the skills of Solution Architects and centers on using SAP Event Mesh to support event-driven integration. It highlights the importance of asynchronous communication, event publishing, and subscription models, allowing organizations to build scalable and decoupled systems. |
| Topic 4 | • SAP Integration Suite Overview: This section of the exam measures the skills of Integration Consultants and covers the foundational concepts of the SAP Integration Suite. It provides an understanding of the suite's capabilities, its role in connecting applications, and its relevance in modern cloud-based integration scenarios. |

# Study C_CPI_2506 Plan, Real C_CPI_2506 Questions

Although at this moment, the pass rate of our C_CPI_2506 exam braindumps can be said to be the best compared with that of other exam tests, our experts all are never satisfied with the current results because they know the truth that only through steady progress can our C_CPI_2506 Preparation materials win a place in the field of exam question making forever. Therefore, buying our C_CPI_2506 actual study guide will surprise you with high grades.

# SAP Certified Associate - Integration Developer Sample Questions (Q38-Q43):

## NEW QUESTION # 38
You want to build an architecture that is largely asynchronous. Which design do you use to exchange notifications between the partners involved?

- A. Event-driven design
- B. Hexagonal design
- C. Serverless design
- D. Request-driven design

**Answer: A**

Explanation:
You can use an OData adapter to implement a synchronous call to a remote HTTP API as an integration flow component. An OData adapter allows you to send and receive messages using the OData protocol. OData stands for Open Data Protocol and is a standard for exposing and consuming data over HTTP or HTTPS. You can use an OData adapter to communicate with OData services that support CRUD (Create, Read, Update, Delete) operations on resources. Reference: Integration Software | SAP Integration Suite, Modernize Integration with SAP Integration Suite | openSAP

## NEW QUESTION # 39
Which functionalities are used by OData?

- A. HTTP. AtomPub, and JSON
- B. TCP. AtomPub, and JSON
- C. SOAP, AtomPub, and JSON

**Answer: A**

Explanation:
OData uses HTTP, AtomPub, and JSON as its core functionalities. OData is an open protocol that allows the creation and consumption of queryable and interoperable RESTful APIs in a simple and standard way. OData builds on HTTP as the application protocol for transferring data between clients and servers. OData uses AtomPub as one of the formats for representing data feeds and entries in XML. OData also uses JSON as another format for representing data feeds and entries in a lightweight and human-readable way. Reference: Introducing OData - SAP Learning, OData Overview | OData - The Best Way to REST

## NEW QUESTION # 40
What can you use to prevent overload in an OData request and reply call?

- A. Paging
- B. Stop parameter
- C. HTTP adapter
- D. Query filter

**Answer: A**

Explanation:
To prevent overload in an OData request and reply call, you can use paging. Paging is a technique that allows you to retrieve a large number of data sets in smaller chunks or pages. You can use the OData query options $top and $skip to specify how many records you want to fetch and how many records you want to skip in each request. This reduces the network load and improves the performance of the OData service. Reference: OData API | SAP Help Portal, SAP Integration Suite: enrich a payload with OData Service | SAP Blogs

## NEW QUESTION # 41
What does the "Open Integration" principle of the SAP Integration Suite mean?

- A. SAP Integration Suite by default supports integrations to other SAP soft-ware.
- B. SAP Integration Suite allows SAP-to-SAP integrations.
- C. SAP Integration Suite by default supports third-party software integration.

**Answer: C**

Explanation:
The "Open Integration" principle of the SAP Integration Suite means that SAP Integration Suite by default supports third-party software integration. The SAP Integration Suite is an open and modular iPaaS that allows you to integrate any system or application, regardless of whether it is from SAP or not. The SAP Integration Suite provides various connectors, adapters, APIs, and pre-built integrations that enable you to connect to third-party software with ease and flexibility. Reference: Integration Software | SAP Integration Suite, Modernize Integration with SAP Integration Suite | openSAP

## NEW QUESTION # 42
You want to publish a new API product to the API business hub enter-prise. What is a requirement?

- A. At least one deployed API Proxy
- B. At least one deployed API Provider
- C. At least two deployed API Providers
- D. At least two deployed API Proxies

**Answer: A**

Explanation:
To publish a new API product to the API business hub enterprise, you need at least one deployed API proxy as a requirement. An API proxy is an API that acts as an intermediary between an API provider and an API consumer. It can be used to add security, monitoring, caching, transformation, and other features to the API provider. An API product is a bundle of one or more API proxies that are grouped together for a specific business scenario or use case. To create an API product, you need to select one or more deployed API proxies from your API portal and provide some metadata, such as name, title, description, quota limits, and so on. Then you can publish your API product to the API business hub enterprise, which is a centralized platform for discovering, consuming, and managing APIs. Reference: Create an API Proxy | SAP Help Portal, Create a Product | SAP Help Portal

## NEW QUESTION # 43
......

Are you worried about you poor life now and again? Are you desired to gain a decent job in the near future? Do you dream of a better life? Do you want to own better treatment in the field? If your answer is yes, please prepare for the C_CPI_2506 Exam. It is known to us that preparing for the exam carefully and getting the related certification are very important for all people to achieve their dreams in the near future.
