There is no doubt that the C_CPI_2506 certification is a popular exam in the industry. And, C_CPI_2506 is one of the most demanded certifications by the Cisco. We at Rea4test, provide the money back guarantee on our C_CPI_2506 practice exam questions and training material. Our C_CPI_2506 certified professional team continuously works on updated exam content with Latest C_CPI_2506 Questions. If you want to clear the C_CPI_2506 exam in the best way, then you can utilize the best quality products and services provided by us. Our C_CPI_2506 PDF questions have all the updated question answers for C_CPI_2506 exams.

SAP C_CPI_2506 Exam Syllabus Topics:

Topic	Details
Topic 1	Implementing Cloud Integration: This section of the exam measures the skills of Integration Consultants and examines how cloud integration flows are designed and deployed. It emphasizes creating integration scenarios, handling connectivity, and applying best practices to build efficient, secure, and reliable integration processes in SAP's cloud environment.
Topic 2	SAP Event Mesh: This section of the exam measures the skills of Solution Architects and centers on using SAP Event Mesh to support event-driven integration. It highlights the importance of asynchronous communication, event publishing, and subscription models, allowing organizations to build scalable and decoupled systems.
Topic 3	Managing APIs: This section of the exam measures the skills of Solution Architects and focuses on managing APIs within the SAP ecosystem. It covers topics such as API provisioning, lifecycle management, security policies, and monitoring, ensuring candidates can handle APIs effectively for enterprise integration needs.
Topic 4	SAP Integration Suite Overview: This section of the exam measures the skills of Integration Consultants and covers the foundational concepts of the SAP Integration Suite. It provides an understanding of the suite's capabilities, its role in connecting applications, and its relevance in modern cloud-based integration scenarios.

2025 SAP Updated C_CPI_2506 Top Exam Dumps

If you are craving for getting promotion in your company, you must master some special skills which no one can surpass you. To suit your demands, our company has launched the C_CPI_2506 exam materials especially for office workers. For on one hand, they are busy with their work, they have to get the C_CPI_2506 Certification by the little spread time. On the other hand, it is not easy to gather all of the exam materials by themselves. So our C_CPI_2506 study questions are their best choice.

SAP Certified Associate - Integration Developer Sample Questions (Q18-Q23):

NEW QUESTION # 18

Which SAP Integration Suite component delivers the Cloud Event to the "emis-s4hana-uc123" message queue?

- A. Open Connector
- B. API Management
- C. Event Mesh
- D. Process Integration

Answer: C

Explanation:

In SAP Integration Suite, the component responsible for delivering Cloud Events to message queues is Event Mesh.

Event Mesh handles event-driven communication and manages message queues like emis-s4hana-uc123.

Process Integration (PI/PO) is on-premise middleware, not part of Integration Suite cloud services.

API Management handles APIs, not messaging events.

Open Connectors provides connectivity to third-party SaaS apps, not queue management.

Thus, the Cloud Event is delivered to the message queue via Event Mesh.

NEW QUESTION # 19

In a Data Store write operation, you want to set an Entry ID by reading a header value from an incoming message. Which notation do you use to implement this?

- A. `${header.receiver}`
- B. `S{receiverheader}`
- C. `S${headerreceiver}`
- D. `S{receiverheader}`

Answer: A

Explanation:

In SAP Cloud Integration, dynamic configuration values (headers, properties, body elements) are accessed using Expression Language (EL) notation:

`${header.<headerName>}` # Accesses a message header value.

`${property.<propertyName>}` # Accesses a message property.

`${body}` # Accesses the payload.

Therefore, when you want to set an Entry ID in a Data Store Write operation using a header value, the correct syntax is `${header.receiver}`.

NEW QUESTION # 20

What is a characteristic of a product in the API Management capability within SAP Integration Suite?

- A. It encapsulates the API provider.
- B. It is deployed as a separate artifact on the API business hub enterprise
- C. It is a separate artifact and is required for basic authentication.

Answer: B

Explanation:

A product in the API Management capability within SAP Integration Suite is a bundle of one or more API proxies that are grouped together for a specific business scenario or use case. A product is a separate artifact that can be deployed to the API business hub enterprise, which is a centralized platform for discovering, consuming, and managing APIs. A product can have its own metadata,

such as name, title, description, quota limits, and so on. A product can also have its own policies that apply to all the APIs included in it. Reference: Create a Product | SAP Help Portal, API Business Hub Enterprise | SAP Help Portal

NEW QUESTION # 21

You use an APIKey for authentication in an HTTPS API call. In which part of the Content Modifier is the APIKey included?

- A. Attachment
- **B. Message header**
- C. Message body
- D. Exchange property

Answer: B

Explanation:

When using API Key authentication for HTTP(S) calls in SAP Integration Suite:

The API Key is typically included in the HTTP header (e.g., APIKey: <value> or x-api-key: <value>).

Message headers are configured in the Content Modifier for outbound requests.

Other options:

Attachment # Used for file handling, not authentication.

Message body # Contains payload, not credentials.

Exchange property # Used internally within the flow, not sent externally.

Thus, the API Key must be placed in the Message header.

NEW QUESTION # 22

You want to set up an SAP backend system through the Cloud Connector with an API provider. Which connection type do you use?

- **A. On-premise**
- B. Open Connectors
- C. Cloud Integration
- D. Internet

Answer: A

Explanation:

To connect an SAP backend system through the Cloud Connector with an API provider, you must use the on-premise connection type. The Cloud Connector acts as a link between SAP Integration Suite and on-premise systems, enabling secure and controlled access to the backend resources. The on-premise connection type allows you to specify the internal host and port of the backend system, as well as the virtual host and port that will be exposed to SAP Integration Suite. You can also define access control rules and protocols for the on-premise connection. Reference: Part 2: Connect to on-premise APIs from SAP Cloud Platform API Management Cloud Foundry Environment | SAP Blogs, How to configure SAP Cloud Connector & Create API using SCP API Management | SAP Blogs

NEW QUESTION # 23

.....

Many candidates find the SAP C_CPI_2506 exam preparation difficult. They often buy expensive study courses to start their SAP C_CPI_2506 certification exam preparation. However, spending a huge amount on such resources is difficult for many SAP C_CPI_2506 Exam applicants.
