# **C\_IBP\_2502** Test Dumps: SAP Certified Associate - SAP IBP for Supply Chain - C\_IBP\_2502 Actual Exam Questions

P.S. Free 2025 SAP C\_IBP\_2502 dumps are available on Google Drive shared by FreePdfDump: https://drive.google.com/open?id=1jEITtF3ajhnXmG\_uz46NSFEjSLs7o3wy

PDF format is pretty much easy to use for the ones who always have their smart devices and love to prepare for SAP Certified Associate - SAP IBP for Supply Chain (C\_IBP\_2502) exam from them. Applicants can also make notes of printed C\_IBP\_2502 Exam Material so they can use it anywhere in order to pass SAP Certified Associate - SAP IBP for Supply Chain (C\_IBP\_2502) with a good score.

Solutions is commented FreePdfDump to ace your SAP Certified Associate - SAP IBP for Supply Chain (C\_IBP\_2502) exam preparation and enable you to pass the final SAP C\_IBP\_2502 exam with flying colors. To achieve this objective Exams. Solutions is offering updated, real, and error-free C\_IBP\_2502 Certification Exam questions in three easy-to-use and compatible formats. These SAP Certified Associate - SAP IBP for Supply Chain (C\_IBP\_2502) exam questions formats will help you in preparation.

>> Latest C IBP 2502 Study Guide <<

### 100% Pass 2025 SAP C\_IBP\_2502 Authoritative Latest Study Guide

Our SAP C\_IBP\_2502 real test can bring you the most valid and integrated content to ensure that what you study with is totally in accordance with the real SAP C\_IBP\_2502 Exam. And we give sincere and suitable after-sales service to all our customers to provide you a 100% success guarantee to pass your exams on your first attempt.

## SAP C\_IBP\_2502 Exam Syllabus Topics:

Topic	Details

Торіс 1	<ul> <li>Solution Architecture &amp; Data Integration: his exam section is aimed at solution architects who work with SAP data integration. It covers the fundamental concepts of integrating external data sources with SAP, ensuring seamless data flow between systems. Candidates need to understand how to maintain system architecture for optimized performance and reliability.</li> </ul>
Topic 2	<ul> <li>General Configuration of a Planning Area: This section is aimed at SAP solution consultants and covers the configuration of a planning area. It includes defining key planning parameters, setting up structures, and ensuring the system is configured to meet business needs. Candidates will be tested on their ability to customize planning areas for optimal performance.</li> </ul>
Торіс 3	<ul> <li>Demand Planning: This section measures the skills of demand planners and focuses on the core concepts of demand planning. It includes understanding forecasting techniques, demand sensing, and demand propagation. Candidates are tested on their ability to manage demand signals and align planning with business objectives.</li> </ul>
Торіс 4	<ul> <li>User Interface: This section assesses the knowledge of business users in navigating and utilizing the SAP interface effectively. It covers how to interact with different features, customize views, and leverage UI functionalities for efficient planning and reporting. Candidates are expected to demonstrate proficiency in accessing and interpreting data within the system.</li> </ul>
Topic 5	<ul> <li>Master Data: This section is relevant to master data specialists and focuses on managing essential data for planning activities. It includes an understanding of product, location, and resource master data within SAP. Candidates will be tested on how to maintain accurate and consistent data to support planning functions.</li> </ul>
Торіс 6	<ul> <li>Analytics and Reporting: his section evaluates the expertise of reporting specialists in generating and interpreting reports within SAP. It covers key analytical tools and reporting functions that provide insights into planning performance. Candidates will be assessed on their ability to extract, analyze, and present data effectively to support business decisions.</li> </ul>
Торіс 7	<ul> <li>Key Figures &amp; Attributes: This section of the exam measures the skills of supply chain analysts and focuses on the key figures and attributes used in planning. It covers how to define and configure key figures to ensure accurate data representation and decision-making. Candidates are also tested on their ability to manage attributes that support various planning scenarios.</li> </ul>
Topic 8	<ul> <li>Model Sales &amp; Operations Processes: This section targets operations managers and evaluates knowledge of sales and operations planning. It covers the alignment of supply and demand, scenario planning, and decision-making processes to optimize operational efficiency. Candidates will be assessed on their ability to configure models that support strategic business goals.</li> </ul>
Торіс 9	Model Supply Processes: This section assesses the expertise of supply chain planners in designing and managing supply processes. It includes setting up sourcing, inventory management, and supply constraints. Candidates will be evaluated on their ability to model supply networks and optimize resource allocation.

# SAP Certified Associate - SAP IBP for Supply Chain Sample Questions (Q24-Q29):

#### **NEW QUESTION #24**

What are some of the actions configurators can do when working with versions? Note: There are 2 correct answers to this question.

- A. Copy key figure data from any version to any version
- B. Delete key figure data for a date range for all versions at once
- C. Copy master data from base version to other version
- D. Run an application job to purge obsolete versions

#### Answer: A,C

#### Explanation:

Versions in SAP IBP (e.g., baseline, scenario) allow what-if planning, with configurators managing data across them, per SAP IBP's

version management documentation.

- \* Option A: Delete key figure data for a date range for all versions at once This is incorrect. Purge jobs delete data per version, not across all versions simultaneously in one action.
- \* Option B: Copy key figure data from any version to any versionThis is correct. The Copy Operator can transfer key figure data between any versions (e.g., baseline to scenario), a standard feature, per SAP IBP's documentation.
- \* Option C: Copy master data from base version to other versionThis is correct. Master data can be copied from the base version to other versions via the Manage Versions app or data integration, per SAP IBP's version setup.
- \* Option D: Run an application job to purge obsolete versionsThis is incorrect. Versions are managed manually or via expiration, but there's no specific job to "purge obsolete versions"; data purging is separate.

Thus, B and C are valid actions, per SAP IBP's official version capabilities.

#### **NEW QUESTION #25**

What are some of the capabilities of the Planner Workspaces app? Note: There are 2 correct answers to this question.

- A. It supports favorites created in SAP IBP, add-in for Microsoft Excel
- B. It supports sharing with other users or user groups
- C. It supports embedding analytic stories as a workspace component
- D. It supports simulating the effect of the changes

#### Answer: A,C

#### Explanation:

The Planner Workspaces app in SAP IBP is a Fiori-based UI that integrates planning tools, analytics, and collaboration features for supply chain planners.

- \* Option A: It supports simulating the effect of the changes This is incorrect. While simulation is a feature in SAP IBP (e.g., via versions or scenarios in Excel), Planner Workspaces focuses on visualization and navigation, not direct simulation execution. Simulation occurs in other apps like Excel or Manage Scenarios.
- \* Option B: It supports favorites created in SAP IBP, add-in for Microsoft ExcelThis is correct.

Planner Workspaces integrates with the Excel add-in, allowing users to access their Excel favorites (e.

- g., planning views) directly within the workspace. This enhances usability by linking preferred tools, as per SAP IBP's documentation on Planner Workspaces.
- \* Option C: It supports embedding analytic stories as a workspace component This is correct.

Analytic stories (created in the Manage Analytics Stories app) can be embedded in Planner Workspaces, providing charts and insights alongside planning data. This is a key visualization feature, per SAP IBP's UI capabilities.

\* Option D: It supports sharing with other users or user groups This is incorrect. Sharing is available in Excel (e.g., templates) or analytics apps, but Planner Workspaces doesn't have a native sharing function for workspaces themselves. Collaboration occurs via other mechanisms.

Thus, B and C are accurate capabilities of Planner Workspaces, aligning with SAP IBP's official feature set.

#### **NEW QUESTION #26**

You need to use your resource cost-effectively with a certain minimum use, even if it means producing more than demand. Which solutions would apply to this scenario? Note: There are 2 correct answers to this question.

- A. Minimum capacity utilization will result in pull production
- B. Balance can be achieved between excessive prebuild and minimum use by incorporating violation costs
- C. Capacity leveling will be possible for production and storage resources
- D. Excess stock can be generated and will need to be staged in an overflow warehouse

#### Answer: B,D

#### Explanation:

This scenario involves optimizing resource use with a minimum threshold, potentially overproducing, in SAP IBP's supply planning, per its documentation.

- \* Option A: Excess stock can be generated and will need to be staged in an overflow warehouse This is correct. Overproduction to meet minimum use generates excess stock, requiring storage (e.g., overflow warehouse), a practical outcome, per SAP IBP's planning behavior.
- \* Option B: Capacity leveling will be possible for production and storage resources This is incorrect.

Capacity leveling (smoothing production) is a PP/DS feature, not standard in IBP's time-series planning.

\* Option C: Balance can be achieved between excessive prebuild and minimum use by incorporating violation costs This is correct.

The Supply Optimizer can balance minimum utilization (via costs) and excess production (via inventory costs), a supported solution, per SAP IBP's optimization features.

\* Option D: Minimum capacity utilization will result in pull productionThis is incorrect. Pull production (demand-driven) contradicts producing beyond demand; this scenario aligns with push logic.

Thus, A and C apply, per SAP IBP's official supply planning capabilities.

#### **NEW OUESTION #27**

What do you need to be aware of when using multiple pairs of key figures in one copy operator? Note: There are 2 correct answers to this question.

- A. Copying multiple key figures can be processed sequentially
- B. Copying multiple key figures on different planning levels is not possible
- C. Necessary source key figures values are disaggregated
- D. Necessary target key figures values are disaggregated

#### Answer: A,D

#### Explanation:

The Copy Operator in SAP IBP transfers data between key figures, supporting multiple source-target pairs in one run. Its behavior is defined by SAP IBP's data management rules.

- \* Option A: Copying multiple key figures can be processed sequentiallyThis is correct. When multiple pairs are defined, the Copy Operator processes them sequentially within the job, ensuring dependencies are respected, per SAP IBP's operator documentation.
- \* Option B: Copying multiple key figures on different planning levels is not possible This is incorrect.

The Copy Operator supports different planning levels (e.g., PERPROD to PERPRODLOC), adjusting aggregation/disaggregation as needed.

- \* Option C: Necessary source key figures values are disaggregated This is incorrect. Source key figures are copied as-is; disaggregation occurs on the target side if required, not the source.
- \* Option D: Necessary target key figures values are disaggregated This is correct. If the target key figure's planning level is more detailed than the source, SAP IBP disaggregates values (e.g., using proportional factors), a standard behavior, per documentation. Thus, A and D are key considerations for the Copy Operator, per SAP IBP's official rules.

#### **NEW QUESTION #28**

Which type of master data represents the Master Data Type Component?

- A. Virtual master data type
- B. Reference Master Data Type
- C. Compound Master Data Type
- D. External Master Data Type

#### Answer: B

#### Explanation:

Master data types in SAP IBP define planning objects, with "Component" typically referring to a specific type like Production Source Item Component, per SAP IBP's documentation.

- \* Option A: Virtual master data type This is incorrect. Virtual types are temporary or derived, not standard for components.
- \* Option B: Compound Master Data TypeThis is incorrect. Compound types (e.g., SOURCECUSTOMER) combine multiple simple types, not specifically "Component."
- \* Option C: Reference Master Data TypeThis is correct. The Component master data type (e.g., in Production Source Item) is a Reference type, linking to a Product, per SAP IBP's master data hierarchy (e.g., referencing Product ID).
- \* Option D: External Master Data TypeThis is incorrect. External types are sourced externally, not a fit for Component. Thus, C is the correct type, per SAP IBP's official master data definitions.

#### **NEW QUESTION #29**

....

Sharp tools make good work. Our C\_IBP\_2502 study quiz is the best weapon to help you pass the exam. After a survey of the users as many as 99% of the customers who purchased our C\_IBP\_2502 preparation questions have successfully passed the exam.

And it is hard to find in the market. The pass rate is the test of a material. Such a high pass rate is sufficient to prove that C IBP 2502 Guide materials has a high quality.
