SAP Certified Associate -
SAP IBP for Supply Chain

Including Package

1. Free Updates For SAP Dumps Upto 90days
2. Self Learning Videos Lifetime Access For Free
3. SAP Server Access For Practice 1 Month Free
4. 100% Money Back Gurrenty
5. 24 by 7 Customer Supports
6. Similar to Actual Examination

WWW.ERPOFFICIALDUMPS.COM

SAP trained experts have made sure to help the potential applicants of SAP C_IBP_2502 certification to pass their SAP C_IBP_2502 exam on the first try. Our PDF format carries real SAP Certified Associate - SAP IBP for Supply Chain exam dumps. You can use this format of SAP C_IBP_2502 Actual Questions on your smart devices.

SAP C_IBP_2502 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • User Interface: This section assesses the knowledge of business users in navigating and utilizing the SAP interface effectively. It covers how to interact with different features, customize views, and leverage UI functionalities for efficient planning and reporting. Candidates are expected to demonstrate proficiency in accessing and interpreting data within the system.
Topic 2	<ul style="list-style-type: none"> • Model Sales & Operations Processes: This section targets operations managers and evaluates knowledge of sales and operations planning. It covers the alignment of supply and demand, scenario planning, and decision-making processes to optimize operational efficiency. Candidates will be assessed on their ability to configure models that support strategic business goals.
Topic 3	<ul style="list-style-type: none"> • Analytics and Reporting: his section evaluates the expertise of reporting specialists in generating and interpreting reports within SAP. It covers key analytical tools and reporting functions that provide insights into planning performance. Candidates will be assessed on their ability to extract, analyze, and present data effectively to support business decisions.
Topic 4	<ul style="list-style-type: none"> • Demand Planning: This section measures the skills of demand planners and focuses on the core concepts of demand planning. It includes understanding forecasting techniques, demand sensing, and demand propagation. Candidates are tested on their ability to manage demand signals and align planning with business objectives.

Topic 5	<ul style="list-style-type: none"> • Master Data: This section is relevant to master data specialists and focuses on managing essential data for planning activities. It includes an understanding of product, location, and resource master data within SAP. Candidates will be tested on how to maintain accurate and consistent data to support planning functions.
Topic 6	<ul style="list-style-type: none"> • Key Figures & Attributes: This section of the exam measures the skills of supply chain analysts and focuses on the key figures and attributes used in planning. It covers how to define and configure key figures to ensure accurate data representation and decision-making. Candidates are also tested on their ability to manage attributes that support various planning scenarios.
Topic 7	<ul style="list-style-type: none"> • Planning Operators & Application: Jobs This section is designed for demand planners and focuses on the configuration and execution of planning operators and application jobs. It includes an understanding of how these tools automate planning processes and improve system performance. Candidates will be tested on their ability to configure and execute jobs that support various planning functions.
Topic 8	<ul style="list-style-type: none"> • Solution Architecture & Data Integration: This exam section is aimed at solution architects who work with SAP data integration. It covers the fundamental concepts of integrating external data sources with SAP, ensuring seamless data flow between systems. Candidates need to understand how to maintain system architecture for optimized performance and reliability.
Topic 9	<ul style="list-style-type: none"> • General Configuration of a Planning Area: This section is aimed at SAP solution consultants and covers the configuration of a planning area. It includes defining key planning parameters, setting up structures, and ensuring the system is configured to meet business needs. Candidates will be tested on their ability to customize planning areas for optimal performance.

>> C_IBP_2502 Trustworthy Exam Content <<

Exams C_IBP_2502 Torrent, Exam Sample C_IBP_2502 Online

Just the same as the free demo, we have provided three kinds of versions of our C_IBP_2502 preparation exam, among which the PDF version is the most popular one. It is understandable that many people give their priority to use paper-based materials rather than learning on computers, and it is quite clear that the PDF version is convenient for our customers to read and print the contents in our C_IBP_2502 Study Guide. After printing, you not only can bring the study materials with you wherever you go, but also can make notes on the paper at your liberty. Do not wait and hesitate any longer, your time is precious!

SAP Certified Associate - SAP IBP for Supply Chain Sample Questions (Q26-Q31):

NEW QUESTION # 26

You create a planning filter using an SAP IBP Fiori app. Which of the following objects can it be applied to?

Note: There are 2 correct answers to this question.

- A. Compare function in the Planning Areas app
- **B. Jobs in the Application Jobs app**
- C. Supply chain graph in Supply Chain Network app
- **D. Planning view templates in the SAP IBP, add-in for Microsoft Excel**

Answer: B,D

Explanation:

Planning filters in SAP IBP, created via the Manage Planning Filters app (Fiori-based), define subsets of data (e.g., by Product, Location) for use across various applications. Their applicability depends on SAP IBP's functional scope.

* Option A: Planning view templates in the SAP IBP, add-in for Microsoft Excel This is correct.

Planning filters can be applied to planning view templates in the Excel add-in to restrict data displayed or edited (e.g., show only products in Region X). This is a core feature for planners, as per SAP IBP's Excel integration documentation.

* Option B: Jobs in the Application Jobs app This is correct. Planning filters can be parameters in application jobs (e.g., Copy Operator, Purge Data) to limit the scope of data processed (e.g., purge data for specific Locations). This is a standard capability in the Application Jobs app, per SAP IBP's job management guides.

* Option C: Compare function in the Planning Areas app This is incorrect. The Planning Areas app manages planning area configurations, and while it has a "Compare" function to analyze differences, planning filters are not applied here. Filters are for runtime data, not configuration comparison.

* Option D: Supply chain graph in Supply Chain Network app This is incorrect. The Supply Chain Network app visualizes the network (e.g., Locations, Transportation Lanes), but planning filters are not directly applied to this graph. Filters affect data views, not network visualizations.

Thus, A and B are the correct objects where planning filters can be applied, per SAP IBP's official functionality.

NEW QUESTION # 27

What are some of the capabilities of the Planner Workspaces app? Note: There are 2 correct answers to this question.

- A. It supports favorites created in SAP IBP, add-in for Microsoft Excel
- B. It supports sharing with other users or user groups
- C. It supports simulating the effect of the changes
- D. It supports embedding analytic stories as a workspace component

Answer: A,D

Explanation:

The Planner Workspaces app in SAP IBP is a Fiori-based UI that integrates planning tools, analytics, and collaboration features for supply chain planners.

* Option A: It supports simulating the effect of the changes This is incorrect. While simulation is a feature in SAP IBP (e.g., via versions or scenarios in Excel), Planner Workspaces focuses on visualization and navigation, not direct simulation execution. Simulation occurs in other apps like Excel or Manage Scenarios.

* Option B: It supports favorites created in SAP IBP, add-in for Microsoft Excel This is correct.

Planner Workspaces integrates with the Excel add-in, allowing users to access their Excel favorites (e.g., planning views) directly within the workspace. This enhances usability by linking preferred tools, as per SAP IBP's documentation on Planner Workspaces.

* Option C: It supports embedding analytic stories as a workspace component This is correct.

Analytic stories (created in the Manage Analytics Stories app) can be embedded in Planner Workspaces, providing charts and insights alongside planning data. This is a key visualization feature, per SAP IBP's UI capabilities.

* Option D: It supports sharing with other users or user groups This is incorrect. Sharing is available in Excel (e.g., templates) or analytics apps, but Planner Workspaces doesn't have a native sharing function for workspaces themselves. Collaboration occurs via other mechanisms.

Thus, B and C are accurate capabilities of Planner Workspaces, aligning with SAP IBP's official feature set.

NEW QUESTION # 28

What is an example of a commonly used time-independent key figure?

- A. Any attribute as a key figure
- B. A unit of measure key figure, such as UoM Conversion Factor
- C. A special key figure marked as an aggregate key figure (aggregate constraint)
- D. A currency conversion key figure, such as Exchange Rate

Answer: A

Explanation:

In SAP IBP, key figures can be time-dependent (e.g., forecast quantities over weeks) or time-independent (static values not tied to time periods). Time-independent key figures are often used for constants or attributes in planning calculations.

* Option A: A special key figure marked as an aggregate key figure (aggregate constraint) This is incorrect. Aggregate key figures (e.g., summing demand across products) are typically time-dependent, as they reflect data over a planning horizon, not static values.

* Option B: A unit of measure key figure, such as UoM Conversion Factor This is incorrect in this context. While UoM Conversion Factor is time-independent (e.g., 1 kg = 1000 g), it's technically a master data attribute, not a key figure in SAP IBP's standard terminology. Key figures are editable or calculated, whereas UoM factors are static settings.

* Option C: Any attribute as a key figure This is correct. In SAP IBP, attributes (e.g., Product Category, Customer Priority) can be configured as time-independent key figures via the "Attribute as Key Figure" feature. For example, a Product's "Safety Stock Target" could be a static key figure used across all periods, a common practice in supply planning, as per SAP IBP's configuration options.

* Option D: A currency conversion key figure, such as Exchange Rate This is incorrect. Exchange rates can vary over time (e.g.,

monthly rates), making them time-dependent in most cases. Even if static, they're typically master data or external inputs, not a "commonly used" key figure example in SAP IBP.

Thus, C is the best example of a commonly used time-independent key figure, aligning with SAP IBP's flexibility to model attributes as static key figures.

NEW QUESTION # 29

Which Maintenance, Repair, and Overhaul (MRO) parts planning processes are included in SAP Integrated Business Planning for Supply Chain? Note: There are 3 correct answers to this question.

- A. SAP Intelligent Asset Management
- B. Supply Planning
- C. Demand Planning
- D. Demand Driven Replenishment
- E. Inventory Optimization

Answer: B,C,E

Explanation:

MRO parts planning in SAP IBP supports maintenance operations with demand, supply, and inventory processes, per SAP IBP's supply chain planning scope.

* Option A: Inventory Optimization This is correct. Inventory Optimization (e.g., safety stock for MRO parts) ensures availability for maintenance, a key MRO process, per SAP IBP's documentation.

* Option B: Demand Driven Replenishment This is incorrect. Demand Driven Replenishment (DDR) is a specific methodology in SAP IBP, but it's not standard for MRO; it's more for manufacturing/retail.

* Option C: Demand Planning This is correct. Demand Planning forecasts MRO parts needs (e.g., based on maintenance schedules), a core process, per SAP IBP's demand module.

* Option D: Supply Planning This is correct. Supply Planning ensures MRO parts are sourced and available, using heuristics or optimization, per SAP IBP's supply planning features.

* Option E: SAP Intelligent Asset Management This is incorrect. SAP IAM is a separate solution, not an IBP process, though it can integrate with IBP for MRO planning.

Thus, A, C, and D are MRO processes in SAP IBP, per official documentation.

NEW QUESTION # 30

You are modeling co-products in SAP Integrated Business Planning for Supply Chain. What are some of the properties of co-production you need to be aware of? Note: There are 2 correct answers to this question.

- A. Co-production can be modeled only by supply optimizer and finite heuristics
- B. The relationship between main product and co-product is specified in the production source of supply
- C. The output coefficient is time-dependent and should be modeled as a time series
- D. The number of co-products that can be defined in the supply model is unlimited

Answer: B,D

Explanation:

Co-products in SAP IBP represent items produced simultaneously with a main product (e.g., in chemical manufacturing). They are modeled in supply planning, typically via the Production Source of Supply master data.

* Option A: The number of co-products that can be defined in the supply model is unlimited This is correct. SAP IBP's Production Source Item allows multiple co-products to be linked to a main product via output coefficients. There's no hardcoded limit, though practical constraints (e.g., performance) may apply, as per SAP IBP's supply planning documentation.

* Option B: The output coefficient is time-dependent and should be modeled as a time series This is incorrect. The output coefficient (e.g., 1 unit of main product yields 0.5 units of co-product) is a static attribute in the Production Source Item master data, not a time-dependent key figure by default. Time-series modeling is possible but not required.

* Option C: The relationship between main product and co-product is specified in the production source of supply This is correct. In SAP IBP, the Production Source of Supply (e.g., Production Source Header and Item) defines the main product and co-products, including output ratios, as a core feature of supply planning, per official documentation.

* Option D: Co-production can be modeled only by supply optimizer and finite heuristics This is incorrect. Co-products are supported by both infinite heuristics (e.g., calculating unconstrained supply) and finite methods (optimizer, heuristics), not limited to finite planning.

Thus, A and C accurately describe co-production properties in SAP IBP, per its supply modeling capabilities.

NEW QUESTION # 31

.....

At Pass4guide, we are aware that every applicant of the SAP Certified Associate - SAP IBP for Supply Chain (C_IBP_2502) examination is different. We know that everyone has a distinct learning style, situations, and set of goals, therefore we offer SAP C_IBP_2502 updated exam preparation material in three easy-to-use formats to accommodate every exam applicant's needs. This article will go over the three formats of the SAP Certified Associate - SAP IBP for Supply Chain (C_IBP_2502) practice material that we offer.
