And you can free download the demo of our C_S4EWM_2023 learning guide before your payment. Just rush to buy our C_S4EWM_2023 exam braindump!

SAP Certified Associate - SAP S/4HANA Cloud Private Edition, Extended Warehouse Management Sample Questions (Q14-Q19):

NEW QUESTION # 14

You are using delivery-based production integration. Which of the following are created for the outbound delivery in SAP ERP for staging? Note: There are 2 correct answers to this question.

- A. An outbound delivery order in SAP EWM when the supplying storage location is connected to SAP EWM and the receiving storage location has NO warehouse management.
- B. An internal stock transfer in SAP EWM when the supplying and receiving storage locations are the same.
- C. An inbound delivery in the receiving warehouse when the supplying and receiving storage locations are assigned to different

warehouse numbers.

- D. A posting change document in SAP EWM when the supplying and receiving storage locations are assigned to the same warehouse number.

Answer: C,D

NEW QUESTION # 15

What are some requirements for automatic wave creation? Note: There are 2 correct answers to this question.

- A. Job for automatic release is scheduled
- B. Wave templates with release method "Automatic" are defined
- C. Conditions and condition records exist
- D. Wave templates with one or more options are defined

Answer: B,C

Explanation:

Comprehensive and Detailed In-Depth Explanation:

Automatic wave creation in SAP EWM groups outbound tasks. Option C ("Wave templates with release method 'Automatic'") is correct as it triggers wave creation automatically, and option D ("Conditions and condition records exist") is correct because conditions (e.g., time, volume) determine when waves are created, both configured in SPRO: SCM Extended Warehouse Management > Goods Issue Process > Wave Management. Option A (job) is for release, not creation, and option B is too vague.

NEW QUESTION # 16

How are waves created? Note: There are 2 correct answers to this question.

- A. Automatically when a warehouse task is created
- B. Manually during planning in the shipping cockpit
- C. Automatically when an outbound delivery order is created
- D. Automatically when a production material request is created

Answer: B,C

NEW QUESTION # 17

What are characteristics of the early capacity check? Note: There are 2 correct answers to this question.

- A. It is based on capacities of bin types
- B. It is only available when working with mobile devices
- C. It happens during the warehouse task creation
- D. It is done during the actual putaway process

Answer: A,C

Explanation:

Comprehensive and Detailed In-Depth Explanation:

The early capacity check in SAP EWM ensures bins can accommodate stock before task execution. Option C ("It happens during the warehouse task creation") is correct as it occurs when tasks are generated, and option D ("It is based on capacities of bin types") is correct because it uses bin type capacity data, both configured in SPRO: SCM Extended Warehouse Management > Goods Receipt Process > Capacity Check. Option A (mobile devices) is incorrect as it's not device-specific, and option B (during putaway) is too late for an "early" check.

NEW QUESTION # 18

Which stock removal strategy can be realized with either packaging specifications or the alternative unit of measure (AUoM)? Note: There are 2 correct answers to this question.

- A. Partial quantities first

- B. Stringent FIFO
- C. Fixed bin
- D. Large/small quantities

Answer: A,D

NEW QUESTION # 19

.....
