NEW QUESTION # 15

What accelerator can help you document the configuration definition in the Explore phase?

- A. Test plan template
- B. Change request template
- C. Data definition template
- **D. Backlog template**

Answer: D

Explanation:

In the Explore phase of the SAP Activate methodology, documenting the configuration definition is essential to capture requirements and gaps identified during Fit-to-Standard workshops. An accelerator is needed to structure this documentation effectively.

* Option A: Data definition templateIncorrect. Data definition templates are used for data migration planning, typically in the Realize phase. TheSAP S/4HANA Cloud Migration Guidestates, "Data definition templates support data migration tasks, not configuration documentation in the Explore phase."

* Option B: Test plan templateIncorrect. Test plan templates are used in the Realize phase for testing activities, not for configuration documentation. TheSAP S/4HANA Cloud Testing Guidenotes, "Test plan templates are for organizing test cases, not documenting configuration definitions."

* Option C: Change request templateIncorrect. Change request templates manage changes to the system, typically post-Explore. TheSAP S/4HANA Cloud Implementation Guideclarifies, "Change request templates are used for managing system changes, not for capturing configuration definitions in the Explore phase."

* Option D: Backlog templateCorrect. The backlog template is an accelerator used to document configuration definitions, including gaps and delta requirements, during the Explore phase. TheSAP Activate Methodology Guideexplains, "The backlog template is a key accelerator in the Explore phase, used to document configuration definitions and delta requirements identified during Fit-to-Standard workshops, forming the basis for Realize phase activities." Extract from Official Documentation:

* SAP Activate Methodology Guide(SAP Community,<https://community.sap.com>): "In the Explore phase, the backlog template

serves as an accelerator to document configuration definitions, capturing requirements and gaps from Fit-to-Standard workshops for subsequent configuration."

* SAP S/4HANA Cloud Implementation Guide(SAP Help Portal,<https://help.sap.com>): "The backlog template is used during the Explore phase to document configuration definitions, including delta requirements, ensuring a structured transition to the Realize phase." Additional Context:

The backlog template is a critical tool in SAP Cloud ALM, enabling teams to organize and prioritize configuration tasks identified during Fit-to-Standard workshops. Its use aligns with the agile nature of SAP Activate, ensuring traceability and clarity as the project moves into configuration and development phases.

NEW QUESTION # 16

You have assigned a business role to an end user who has been granted access to only one specific application. While you have a day off, it turns out that the app doesn't show up on the user's launchpad. What can the user do?

- A. Assign a different business role that provides access.
- B. Assign a launchpad space to the business role.
- C. Create a page and assign it to the launchpad space.
- **D. Use the search function to find the app.**

Answer: D

Explanation:

The SAP Fiori Launchpad is the primary interface for end users in SAP S/4HANA Cloud Public Edition, providing access to applications based on assigned business roles. If an application does not appear on the user's launchpad, the issue is often related to visibility or navigation rather than role assignment, especially since the user has already been granted access to the specific application.

* Option A: Use the search function to find the app. Correct. The SAP Fiori Launchpad includes a search function that allows users to locate applications, even if they are not immediately visible on their launchpad. According to the SAP S/4HANA Cloud Public Edition User Guide(SAP Help Portal), "The search bar in the SAP Fiori Launchpad enables users to quickly find applications, tiles, or content by entering keywords, even if the application is not pinned to the user's homepage." This is a practical solution for end users to access their assigned applications without requiring administrative intervention.

* Option B: Assign a launchpad space to the business role. Incorrect. Assigning a launchpad space to a business role is an administrative task typically performed by a system administrator, not an end user.

The SAP Fiori Launchpad Configuration Guide states, "Launchpad spaces are configured by administrators to organize applications for business roles." End users lack the permissions to perform this action.

* Option C: Create a page and assign it to the launchpad space. Incorrect. Creating a page and assigning it to a launchpad space is also an administrative task. The SAP Fiori Launchpad Administration Guide notes, "Pages within launchpad spaces are created and managed by administrators to customize the user experience." This is not something an end user can do.

* Option D: Assign a different business role that provides access. Incorrect. Assigning a different business role requires administrative privileges, as outlined in the SAP S/4HANA Cloud Security Guide:

"Business role assignments are managed by administrators through the Maintain Business Roles app." The end user cannot perform this action, and it's unnecessary since the question confirms the user already has access to the application.

Extract from Official Documentation:

* SAP Help Portal - SAP Fiori Launchpad User Guide(<https://help.sap.com>): "Users can utilize the search functionality in the SAP Fiori Launchpad to locate applications or content that may not be immediately visible on their personalized launchpad. This feature enhances user productivity by providing quick access to authorized applications."

* SAP S/4HANA Cloud Implementation Guide: "The SAP Fiori Launchpad is designed to provide intuitive navigation, with a search bar that allows users to find applications assigned to their business roles without requiring additional configuration." Additional Context:

The issue described in the question likely stems from the application tile not being pinned to the user's launchpad or being part of a less visible launchpad space. The search function is the most accessible and user- friendly solution, aligning with SAP's focus on user empowerment in the Fiori Launchpad.
