In SAP S/4HANA Transportation Management, conditions are used to determine specific objects or settings during charge calculation based on predefined rules. According to the SAP documentation:

\* Freight agreement (A): Conditions can be used to select the appropriate freight agreement based on attributes like carrier, purchasing organization, or transportation lane.

\* Rate table (D): Conditions can determine the specific rate table to be used for charge calculation, based on criteria such as source/destination or service type.

The other options are incorrect:

\* Carrier in the freight agreement (B) is determined during carrier selection, not through conditions in charge management.

\* Validity date of the rate table (C) is defined in the rate table configuration and is not determined dynamically via conditions.
