

C_SEC_2405 Reliable Dumps Files, Reliable C_SEC_2405 Test Book

BONUS!!! Download part of PassSureExam C_SEC_2405 dumps for free: https://drive.google.com/open?id=1tdWAL-CZx52izaEmw3r9_O6b0GprHFev

It is understandable that different people have different preference in terms of C_SEC_2405 study guide. Taking this into consideration, and in order to cater to the different requirements of people from different countries in the international market, we have prepared three kinds of versions of our C_SEC_2405 Preparation questions in this website, namely, PDF version, APP online and software version, and you can choose any one of them as you like. You will our C_SEC_2405 exam dumps are the best!

Our C_SEC_2405 practice questions are carefully compiled by our professional experts to be sold all over the world. So the content should be easy to be understood. The difficult questions of the C_SEC_2405 exam materials will have vivid explanations. So you will have a better understanding after you carefully see the explanations. At the same time, our C_SEC_2405 Real Exam just needs to cost you a few spare time. After about twenty to thirty hours' practice, you can completely master all knowledge.

Reliable C_SEC_2405 Test Book | New C_SEC_2405 Test Tutorial

In the past ten years, our company has never stopped improving the quality of our C_SEC_2405 study materials. For a long time, we have invested much money to perfect our C_SEC_2405 exam questions. At the same time, we have introduced the most advanced technology and researchers to perfect our C_SEC_2405 Test Torrent. At present, the overall strength of our company is much stronger than before. We are the leader in the market and master the most advanced technology. With our high quality of C_SEC_2405 training guide, you will pass the C_SEC_2405 exam for sure.

SAP Certified Associate - Security Administrator Sample Questions (Q24-Q29):

NEW QUESTION # 24

Your developer has created a new custom transaction for your SAP S/4HANA on-premise system and has provided you a list of the authorizations needed to execute the new ABAP program. What must you do to ensure that each required authorization is

automatically created every time this new custom transaction is added to a PFCG role?

- A. Maintain each authorization object in transaction SU24 and set the Default Status to "Yes".
- B. Maintain each authorization in transaction SU24 and set the Default Status to "Yes".
- C. Maintain each authorization in transaction SU22 and set the Check Indicator value to "Check".
- D. Maintain each authorization object in transaction SU22 and set the Default Status to "Yes".

Answer: A

Explanation:

To ensure that required authorizations for a new custom transaction in SAP S/4HANA on-premise are automatically created when the transaction is added to a PFCG role, you must maintain each authorization object in transaction SU24 and set the Default Status to "Yes". SU24 is used to define authorization defaults for transactions, specifying which authorization objects and values should be proposed when the transaction is included in a role. Setting the Default Status to "Yes" ensures that these objects are automatically included in the role's authorization data during PFCG maintenance, streamlining role creation and ensuring consistency.

Transaction SU22 is for SAP-delivered defaults, not custom transactions, making options A and B incorrect.

Option C is incorrect because SU24 maintains authorization objects, not individual authorizations. This configuration in SU24 supports efficient and secure role management, reducing manual effort and ensuring that the custom transaction's authorization requirements are consistently applied across roles, aligning with SAP's best practices for custom development.

NEW QUESTION # 25

What are some disadvantages of a Composite Role? Note: There are 2 correct answers to this question.

- A. Menus from the included roles cannot be mixed.
- B. Changes to the included roles are not immediately visible in the composite role menu, requiring a renewed import.
- C. Changes to the authorizations can only be made using the included roles.
- D. Transactions that are deleted from the Composite Role menu are also removed from the included roles.

Answer: B,C

Explanation:

Composite roles in SAP systems group multiple single roles to simplify user assignment, but they have notable disadvantages. One disadvantage is that changes to the included single roles, such as adding or removing transactions, are not immediately visible in the composite role's menu, requiring a renewed import to update the composite role's structure. This delay can lead to inconsistencies during role maintenance, complicating administration. Another disadvantage is that changes to authorizations within a composite role can only be made through the included single roles, as composite roles do not allow direct authorization maintenance. This restriction limits flexibility and requires administrators to modify each single role individually, increasing effort and potential for errors. Menus from included roles can be mixed in the composite role, making option B incorrect, and deleting transactions from the composite role menu does not affect the included roles, ruling out option D. These limitations highlight the need for careful planning when using composite roles to ensure efficient and secure role management.

NEW QUESTION # 26

Under which of the following conditions can you merge authorizations for the same object during role maintenance? Note: There are 2 correct answers to this question.

- A. The activation status and the maintenance status of the authorizations must match.
- B. The maintenance status of the changed authorizations must match the status of a manual authorization.
- C. The activation status and the maintenance status of the authorizations must NOT match.
- D. The activation status of a manual authorization must match the status of the changed authorizations.

Answer: A,D

Explanation:

During role maintenance in SAP systems, merging authorizations for the same object is possible under specific conditions to streamline role management. The activation status of a manual authorization must match the status of the changed authorizations, ensuring consistency in how authorizations are applied within the role. Additionally, both the activation status and the maintenance status of the authorizations must align, meaning that the authorizations being merged should be in the same state (e.g., active or inactive) and maintenance phase (e.g., standard or changed). These conditions prevent conflicts and ensure that merged authorizations function correctly within the role, maintaining security and compliance. Mismatches in status or non-alignment of

maintenance states can lead to errors or unintended access restrictions.

NEW QUESTION # 27

SAP BTP distinguishes between which of the following users? Note: There are 2 correct answers to this question.

- A. Platform users
- B. Technical users
- C. Key users
- D. Business users

Answer: A,B

Explanation:

* Context: SAP BTP categorizes users based on their roles and functionalities within the system.

* Solution Descriptions:

* Technical users: System-to-system interaction and automation.

* Platform users: Direct interaction with SAP BTP services for development, management, or operational purposes.

NEW QUESTION # 28

What happens to data within SAP Enterprise Threat Detection during the aggregation process? Note: There are 3 correct answers to this question.

- A. It is pseudonymized.
- B. It is enriched.
- C. It is categorized.
- D. It is normalized.
- E. It is prioritized.

Answer: A,B,D

Explanation:

During the aggregation process in SAP Enterprise Threat Detection, data undergoes several transformations to ensure it can be effectively analyzed for threats while maintaining privacy and enhancing usability.

* Pseudonymization (B): Sensitive data is pseudonymized to protect privacy. This ensures that personally identifiable information (PII) is masked while still being analyzable for patterns and anomalies.

* Normalization (D): Data from various sources is normalized into a consistent format. This is critical for correlating and analyzing logs from diverse systems.

* Enrichment (E): Additional context is added to the data to enhance its value. For example, IP addresses might be enriched with geolocation data, or event logs might be augmented with user attributes.

NEW QUESTION # 29

.....

With the advent of knowledge times, we all need some professional certificates such as SAP C_SEC_2405 to prove ourselves in different working or learning condition. So making right decision of choosing useful practice materials is of vital importance. Here we would like to introduce our SAP C_SEC_2405 practice materials for you with our heartfelt sincerity.

Reliable C_SEC_2405 Test Book: https://www.passsureexam.com/C_SEC_2405-pass4sure-exam-dumps.html

In reaction to the phenomenon, therefore, the C_SEC_2405 test material is reasonable arrangement each time the user study time, as far as possible let users avoid using our latest C_SEC_2405 exam torrent for a long period of time, it can better let the user

So was it fair to say that all of the programming staff was in the U.S. Using multiple security zones and other advanced virtual network techniques, In reaction to the phenomenon, therefore, the C_SEC_2405 test material is reasonable arrangement each time the user study time, as far as possible let users avoid using our latest C_SEC_2405 exam torrent for a long period of time, it can better let the user attention relatively concentrated time efficient learning.

This was possible only when we were the school, An C_SEC_2405 overview for the products can be seen on our Samples page, Online exam simulation, In addition, what you learn from C_SEC_2405 exam training not only helps you to pass the exam successfully, but also made your knowledge further augmented.
