## SAP C\_SIGDA\_2403 Exam Voucher, Exam C\_SIGDA\_2403 Simulator

Nowadays, a certificate is not only an affirmation of your ability but also help you enter a better company. C\_SIGDA\_2403 learning materials will offer you an opportunity to get the certificate successfully. We have a professional team to search for the information about the exam, therefore C\_SIGDA\_2403 Exam Dumps of us are high-quality. We also pass guarantee and money back guarantee. Just think that, you just need to spend some money, and you can get a certificate, therefore you can have more competitive force in the job market as well as improve your salary.

## SAP Certified Associate - Process Data Analyst - SAP Signavio Sample Questions (Q59-Q64):

### NEW QUESTION # 59

What are some capabilities of the QuickModel feature?Note: There are 2correct answers to thisquestion.

- A. Enriching process models with gateways
- B. Grouping different tasks and transforming them into a subprocess
- C. Creating the happy path of a process
- D. Adding task information, in a table-based format

**Answer: C,D**

Explanation:

The QuickModel feature in SAP Signavio is designed to facilitate rapid and efficient process modeling, particularly for users who may not be familiar with detailed BPMN notation. One of its capabilities includes creating the "happy path" of a process, which represents the most straightforward and issue-free sequence of events in a process. Another key capability is adding task information in a table-based format, which simplifies the process of documenting and managing various tasks within a process model. While QuickModel supports fast and efficient modeling, enriching models with gateways or grouping tasks into a subprocess requires more detailed modeling capabilities beyond the QuickModel feature. References: SAP Signavio User Guide

#### NEW QUESTION # 60

What are the trigger types within SAP Signavio Process Governance? Note: There are 3 correct answers to this question.

- A. Email
- B. Process Manager
- C. Start event
- D. Public or private forms
- E. Task

**Answer: A,C,D**

Explanation:

Within SAP Signavio Process Governance, trigger types are mechanisms that initiate workflows or processes. Public or private forms can serve as triggers when they are filled out and submitted. Start events are predefined conditions or events that, when met, trigger a process to begin. Emails can also act as triggers, where the receipt of an email with specific criteria can initiate a process or task. These trigger types are instrumental in automating processes and ensuring timely responses to various business scenarios. Task and Process Manager, as mentioned, do not serve as trigger types within the context of SAP Signavio Process Governance. References: SAP Signavio Process Governance Documentation

#### NEW QUESTION # 61

Which of the following is essential information that an Eventlog must contain? Note: There are 3 correct answers to this question.

**Answer:**

Explanation:

A,C,E

#### NEW QUESTION # 62

How can KPIs be visualized in the SAP Signavio Process Collaboration Hub? Note: There are 3 correct answers to this question.

- A. By adding live KPIs into the Customer Journey Map
- B. By case exporting
- C. By workflow mining
- D. By adding live KPIs into the process
- E. By monitoring Widgets

**Answer: A,D,E**

Explanation:

The SAP Signavio Process Collaboration Hub is designed to share and visualize process-related information, including Key Performance Indicators (KPIs), to stakeholders. According to the official SAP Signavio documentation, KPIs can be visualized in the Collaboration Hub in multiple ways to enhance process transparency and monitoring. Specifically:

\* Option A (By adding live KPIs into the Customer Journey Map): The Collaboration Hub allows integration of live KPIs into

Customer Journey Maps to provide real-time insights into customer interactions and process performance. This is a standard feature for visualizing KPIs in context.

\* Option C (By monitoring Widgets): Widgets in the Collaboration Hub, such as the Value Widget or Process Performance Widgets, are used to display KPIs dynamically. These widgets can be configured to show metrics like process efficiency or cycle times, making them a key tool for KPI visualization.

\* Option D (By adding live KPIs into the process): KPIs can be embedded directly into process models within the Collaboration Hub, allowing users to monitor performance metrics alongside process diagrams in real time.

\* Option B (By case exporting) is incorrect because case exporting refers to extracting data for external analysis, not visualizing KPIs within the Hub.

Reference: SAP Signavio Process Collaboration Hub documentation, section on KPI visualization and widget configuration; SAP Certified Associate - Process Data Analyst Study Guide, Chapter 3: Collaboration Hub Features.

### NEW QUESTION # 63

Which process-related areas are the focus for Business Process Management? Note: There are 3 correct answers to this question.

- A. Process Governance
- **B. Process Implementation**
- **C. Process Transparency**
- D. Process Discovery
- **E. Process Improvement**

**Answer: B,C,E**

Explanation:

Business Process Management (BPM) encompasses a range of activities to manage and optimize organizational processes. The SAP Signavio Process Transformation Suite Documentation outlines the key areas:

\* Exact Extract: "Business Process Management focuses on:

\* Process Implementation: Executing and deploying process designs to achieve business objectives.

\* Process Improvement: Continuously optimizing processes to enhance efficiency and effectiveness.

\* Process Transparency: Ensuring clear visibility into process structures and performance for all stakeholders." (SAP Signavio Process Transformation Suite Overview, section on "Business Process Management Focus Areas").

\* Explanation:

\* Option A (Process Implementation): BPM includes implementing designed processes, ensuring they are operationalized effectively, often using tools like SAP Signavio Process Governance for workflow execution.

\* Option B (Process Improvement): A core BPM goal is to enhance processes by identifying inefficiencies, reducing costs, or improving quality, supported by tools like SAP Signavio Process Intelligence.

\* Option C (Process Transparency): BPM aims to provide clear visibility into processes through modeling, documentation, and analytics, enabling stakeholders to understand and monitor performance, often via the SAP Signavio Process Collaboration Hub.

\* Option D (Process Discovery) is incorrect as it is a specific capability of Process Mining within SAP Signavio Process Intelligence, not a broad BPM focus area.

\* Option E (Process Governance) is incorrect because, while governance is related to BPM, it is a specific function (e.g., workflow management) rather than a primary focus area like implementation or improvement.
