SAP Certified Associate - Process Data Analyst - SAP Signavio Sample Questions (Q40-Q45):

NEW QUESTION # 40

What are some aggregation functions in ? Note: There are 3 correct answers to this question.

- A. INNER JOIN
- B. AVG()
- C. BOOL_OR
- D. FIRST()
- E. COALESCE

Answer: B,C,D

NEW QUESTION # 41

What is the purpose of Content Assessment Workflows? Note: There are 2 correct answers to this question.

Answer:

Explanation:

B,C

NEW QUESTION # 42

Which of the following Widgets need to be linked to a process model to provide insights? Note: There are 3 correct answers to this question.

- A. Process Discovery
- B. Diagram
- C. Variant Explorer
- D. Process Funnel
- E. Process Conformance

Answer: B,D,E

Explanation:

Certain widgets in SAP Signavio Process Intelligence require a link to a process model (e.g., a BPMN model) to generate meaningful insights by contextualizing data against a defined structure. The documentation specifies:

* Option A (Diagram): The Diagram Widget displays process models from the SAP Signavio Process Manager workspace and requires a link to a specific model to visualize it in the Collaboration Hub or Process Intelligence.

* Option D (Process Funnel): The Process Funnel Widget visualizes case progression along a process path and often needs to be linked to a process model to define the steps in the funnel, ensuring accurate representation of the process flow.

* Option E (Process Conformance): The Process Conformance Widget compares actual process execution against a reference BPMN model, requiring a direct link to the model to identify conformance issues.

* Option B (Process Discovery) is incorrect because it generates process models automatically from event logs without needing a predefined process model.

NEW QUESTION # 43

Which of the following aggregation functions are available in the Value Widget? Note: There are 3 correct answers to this question.

- A. COUNT
- B. AVG
- C. LIMIT
- D. SUM
- E. ADD

Answer: A,B,D

Explanation:

The Value Widget in SAP Signavio Process Intelligence is used to display aggregated metrics, such as KPIs, based on event log data. The documentation lists supported aggregation functions:

- * Option B (SUM):The SUM function calculates the total of a numeric attribute across cases, e.g., summing up costs or durations.
- * Option C (COUNT):The COUNT function tallies the number of occurrences, such as the number of cases or activities.
- * Option E (AVG):The AVG function computes the average of a numeric attribute, useful for metrics like average cycle time.
- * Option A (ADD)is incorrect as ADD is not a standard aggregation function in the Value Widget; SUM is used instead.

NEW QUESTION # 44

Which Widgets can visualize process flows by backtracking the performed events?Note: There are 3correct answers to this question.

- A. Process Discovery
- B. Relate
- C. Breakdown
- D. Process Conformance
- E. Variant Explorer

Answer: A,D,E

Explanation:

Widgets in SAP Signavio that are capable of visualizing process flows by backtracking performed events include Process Conformance, Process Discovery, and Variant Explorer. These widgets provide insights into how processes are actually executed within an organization, identifying deviations from the intended process model, discovering the real process flow, and analyzing different variations of a process. Specifically:

- * Option A (Process Conformance):This widget compares the actual execution of processes against the predefined model to identify compliance and deviations. It helps organizations ensure that processes are performed as designed and identify areas where the actual process diverges from the model.
- * Option B (Process Discovery):Process Discovery automatically generates a process model based on event logs, showing how processes are actually performed. It helps in understanding the real process flow and identifying potential improvements.
- * Option C (Variant Explorer):Variant Explorer analyzes different variations of a process, showing how certain cases follow different paths through the process. It's valuable for understanding the diversity in process execution and pinpointing common or unusual process flows.
