C_TS414_2023 Prepaway Dumps, Latest C_TS414_2023 Exam Papers

Many people may worry that the C_TS414_2023 guide torrent is not enough for them to practice and the update is slowly. We guarantee you that our experts check whether the C_TS414_2023 study materials is updated or not every day and if there is the update the system will send the update to the client automatically. So you have no the necessity to worry that you don't have latest C_TS414_2023 Exam Torrent to practice. We provide the best service to you and hope you are satisfied with our product and our service.

SAP Certified Associate - SAP S/4HANA Cloud Private Edition, Quality Management Sample Questions (Q37-Q42):

NEW QUESTION # 37

Which of the following steps in a business process can be the trigger for an update of the quality level? Note:
There are 2 correct answers to this question.

- A. Making the usage decision for an inspection lot
- B. Creating an inspection lot
- C. Creating a quality notification
- D. Creating a quality certificate

Answer: A,B

Explanation:

The quality level in SAP QM tracks inspection history (e.g., for dynamic modification) and is updated at specific process steps:

* Making the Usage Decision for an Inspection Lot (B): The usage decision (UD, transaction QA11) updates the quality level based on inspection results (e.g., accept/reject), determining future inspection scopes (e.g., skip or reduced). This is configured in SPRO > QM > Quality Inspection > Dynamic Modification.

* Creating an Inspection Lot (C): Lot creation (e.g., for type 01 or 03) can update the quality level if it's the first lot or if prior levels are reset, especially with dynamic modification rules active.

* Creating a Quality Notification (A): Notifications document issues but don't directly update the quality level unless tied to a UD.

* Creating a Quality Certificate (D): Certificates report results but don't influence the quality level.

Thus, "Making the usage decision for an inspection lot" and "Creating an inspection lot" are the correct answers. References: SAP Help Portal - "Quality Level in QM"; SAP S/4HANA QM User Guide - "Dynamic Modification".

NEW QUESTION # 38

A buyer wants to quality management department to approve a new vendor material combination.

After activating the QM in procurement process, what the quality management department ensure in.....

Correct 2

- A. The material master has an active inspection type
- B. A quality agreement for vendor master exists
- C. The material master has a relevant QM Control key assigned to it
- D. A valid release quality info record exists
- E. The inspection plan includes a relevant control key at operation level

Answer: B,D

NEW QUESTION # 39

Which partner function is mandatory when creating a quality notification for the Customer Complaint notification origin?

- A. Contact person
- B. Interested party
- C. Author
- D. Sold-to party

Answer: D

Explanation:

For a quality notification with origin "Customer Complaint" (e.g., type Q1, transaction QM01):

* Sold-to Party (B): The sold-to party (customer) is mandatory because it identifies who raised the complaint, a key field in the notification header linked to SD data (SPRO > QM > Quality Notifications

> Notification Creation > Define Notification Types). Without this, the notification cannot be saved.

* Interested Party (A): Optional, used for additional stakeholders.

* Contact Person (C): Optional, specifies a customer contact but isn't required.

* Author (D): The creator (system user) is auto-filled, not a mandatory partner function.

Thus, "Sold-to party" is the correct answer. References: SAP Help Portal - "Customer Complaint Notifications"; SAP S/4HANA QM User Guide - "Partner Functions".

NEW QUESTION # 40

Coding from different catalogs can be used during defect recording or notification processing. Which object can be used for the combination of code groups from several catalogs?

- A. Catalog profile
- B. Selected set
- C. Report type
- D. Confirmation profile

Answer: A

Explanation:

In SAP S/4HANA QM, combining code groups from multiple catalog types (e.g., defects, causes) into a single object is necessary for processes like defect recording or notifications:

* Catalog Profile (A): The catalog profile (maintained via transaction QPCD or Customizing) is designed to group code groups from different catalog types (e.g., defect types, causes, activities) into a single entity. It's assigned to objects like material masters or notification types, enabling consistent use of codes across processes like defect recording (e.g., in inspection lots) or notification processing (e.g., QN01). This is the standard object for this purpose.

* Report Type (B): Report types (SPRO > QM > Quality Inspection > Define Report Types) define the layout of defect recording but do not combine code groups from catalogs; they reference catalog profiles instead.

* Selected Set (C): A selected set (transaction QS51) is a subset of codes from one catalog type, not a combination across multiple types.

* Confirmation Profile (D): Confirmation profiles are used in production (e.g., PP) for operation confirmations, not QM catalog management.

Thus, "Catalog profile" is the correct answer, as it's the dedicated object for combining codes from multiple catalogs. References: SAP Help Portal - "Catalog Profiles in QM"; SAP S/4HANA QM Customizing Guide - "Catalog Management".

NEW QUESTION # 41

The catalog profile contains a subset of code groups and codes from different catalog types. Where can you assign the catalog profile? Note: There are 3 correct answers to this question.

- A. In the customizing settings for the notification type
- B. In the master inspection characteristic
- C. In the customizing settings for the inspection type
- D. In the quality management view of the material master
- E. In the customizing settings for the report type

Answer: A,C,D

Explanation:

A catalog profile in SAP S/4HANA QM defines a collection of code groups and codes from various catalog types (e.g., defects, usage decisions) for use in quality processes. It can be assigned at multiple levels:

* In the Quality Management View of the Material Master (A): The catalog profile is assigned in the QM view of the material master (transaction MM01/MM02, field QMAT-PROF) at the plant level. This links it to inspection lots for that material, controlling defect recording or UD codes.

* In the Customizing Settings for the Notification Type (B): In Customizing (SPRO > Quality Management > Quality Notifications > Notification Creation > Define Notification Types), you can assign a catalog profile to a notification type (e.g., Q1 for customer complaints). This determines the codes available during notification processing.

* In the Customizing Settings for the Inspection Type (C): In Customizing (SPRO > Quality Management > Quality Inspection > Inspection Lot Creation > Maintain Inspection Types), a catalog profile can be linked to an inspection type (e.g., 01 for goods receipt). This governs the codes used in inspection lots of that type.

* In the Master Inspection Characteristic (D): MICs (transaction QS21) use individual code groups or selected sets, not catalog profiles directly.

* In the Customizing Settings for the Report Type (E): Report types (used in defect recording layouts) reference catalog profiles indirectly via other objects, not as a direct assignment.

Thus, the correct answers are "A, B, C," as these are the standard assignment points. References: SAP Help Portal - "Catalog Profiles in QM"; SAP S/4HANA QM Customizing Guide - "Notification and Inspection Types".

NEW QUESTION # 42

.....

With experienced experts to compile and check the C_TS414_2023 questions and answers, we have received many good

feedbacks from our customers, and they also send some thankful email to us for helping them to pass the exam successfully. The pass rate is 98.75%, and money back guarantee if you fail to pass the exam. We also provide you the free update for one year after purchasing the C_TS414_2023 Study Guide. If you have any questions, you can consult the service stuff.
