Complete Guide to Preparing for the SAP C_TS470_2412 Exam

SAP C_TS470_2412 Exam Guide

www.ERPPrep.com
Prepare for the SAP C_TS470_2412 certification exam with this comprehensive guide. Gain in-depth knowledge of key topics, exam format, and best practices to enhance your understanding. Access expert strategies, sample questions, and study resources to boost your confidence and ensure success in the SAP S/4HANA Cloud Private Edition, Service certification exam.

DOWNLOAD the newest ITdumpsfree C_TS470_2412 PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1vsTxVGAZ4pko7G8bWUzgmIi1n133giL>

Customers first are our mission, and we will try our best to help all of you to get your C_TS470_2412 certification. We offer you the best valid and latest SAP C_TS470_2412 study practice, thus you will save your time and study with clear direction. Besides, we provide you with best safety shopping experience. The Paypal system will guard your personal information and keep it secret. In addition, the high pass rate will ensure you pass your C_TS470_2412 Certification with high score.

SAP C_TS470_2412 Exam Syllabus Topics:

Topic	Details
Topic 1	Managing Clean Core: This section of the exam measures the skills of SAP Solution Architects and covers the principles of maintaining a clean core within SAP systems. It focuses on strategies for minimizing customizations, leveraging standard SAP functionalities, and ensuring system integrity while allowing for necessary extensions. The goal is to enhance system performance, ease upgrades, and maintain long-term sustainability.

Topic 2	Organizational Data: This section of the exam measures the skills of Enterprise Data Managers and covers the structuring and management of organizational data within SAP systems. It focuses on defining key organizational elements, configuring data hierarchies, and ensuring proper integration across business units. Mastery of this domain is essential for maintaining accurate reporting structures, workflow efficiency, and compliance with enterprise-wide data governance policies.
Topic 3	Service Master Data: This section of the exam measures the skills of SAP Master Data Specialists and covers the management and configuration of service-related master data within SAP environments. It includes defining service objects, managing attributes, and ensuring accurate data flow across modules. Effective service master data management helps improve service delivery, optimize resource utilization, and maintain consistency across business processes.
Topic 4	Service Order Management: This section of the exam measures the skills of SAP Service Operations Consultants and covers the end-to-end management of service orders within SAP. It includes the creation, processing, tracking, and fulfillment of service requests, ensuring seamless coordination between departments. Proper service order management enables organizations to enhance customer satisfaction, streamline operations, and improve response times through integrated workflows.

C_TS470_2412 Sure Pass - C_TS470_2412 VCE Exam Simulator

We sincerely suggest you to try these demos of our C_TS470_2412 study guide and make a well-content choice. Different demos have different functions and each version has its advantages during the process of learning. Our C_TS470_2412 Preparation exam is suitable for various consumer groups in the world we assure that after having a knowledge of those demos, you can purchase the most suitable C_TS470_2412 exam materials.

SAP Certified Associate - SAP S/4HANA Cloud Private Edition Service Sample Questions (Q73-Q78):

NEW QUESTION # 73

Why would you maintain price agreements in a service contract?

- A. To define the monthly contract price
- B. To automatically adjust the service order prices
- C. To select the price agreements in the service order
- D. To define the yearly contract price

Answer: B

Explanation:

In SAP S/4HANA Cloud Private Edition, Service, price agreements in a service contract define specific pricing conditions (e.g., discounts, fixed rates) for services or spare parts. The primary purpose is to automatically adjust the service order prices (Option D). When a service order is created and linked to a service contract, the system applies the price agreements from the contract to the order's items, ensuring consistent and contract-specific pricing without manual intervention. This automation enhances efficiency and accuracy in billing.

* A and B: Defining yearly or monthly prices might be part of the contract's billing plan, not the purpose of price agreements specifically.

* C: Price agreements are not "selected" in the service order; they are automatically applied based on the contract.

"Price agreements in a service contract are maintained to automatically adjust prices in associated service orders, ensuring that contract-specific conditions are consistently applied."

NEW QUESTION # 74

Which of the following API types does SAP recommend to use to achieve clean core integrations? Note: There are 2 correct answers to this question.

- A. Doc
- **B. SOAP**
- C. RFC
- **D. OData**

Answer: B,D

Explanation:

SAP's clean core strategy emphasizes standardized, extensible integrations to minimize customizations and ensure upgrade stability.

The recommended API types are:

- * SOAP: A widely supported, robust protocol for structured data exchange, recommended for integrating SAP S/4HANA with external systems in a clean core approach.
- * OData: SAP's preferred REST-based protocol for real-time, lightweight integrations, heavily utilized in SAP Fiori apps and clean core scenarios.
- * Doc: Not a recognized API type in SAP's integration framework.
- * RFC: While still supported, RFC (Remote Function Call) is considered legacy and less aligned with clean core principles due to its tight coupling. These recommendations are part of SAP's integration strategy for S/4HANA Cloud editions. "SOAP and OData are recommended for clean core integrations to ensure standardized and scalable connectivity." (SAP S/4HANA Cloud Integration Guide).

NEW QUESTION # 75

In an SLA determination procedure, which of the following can you use? Note: There are 2 correct answers to this question.

- A. Service organizational unit
- B. Service contract
- **C. Response profile**
- **D. Service profile**

Answer: C,D

Explanation:

In SAP S/4HANA Cloud Private Edition, Service, Service Level Agreement (SLA) determination ensures that service transactions (e.g., service orders) meet predefined time or performance commitments. The SLA determination procedure uses specific profiles to calculate deadlines. The correct answers are service profile (A) and response profile (B). Let's dive into this comprehensively.

What is SLA Determination?

SLA determination automatically assigns deadlines (e.g., response time, resolution time) to service items based on configured rules. It's critical for ensuring customer satisfaction and compliance with contractual obligations.

* Service profile (A): A service profile defines overall SLA parameters, such as the total time allowed to complete a service (e.g., "Resolve within 48 hours"). It's assigned to a service transaction or derived from a contract and includes settings like working hours or escalation rules. For example, a "Gold Service" profile might allow 24 hours for resolution.

* Response profile (B): A response profile specifies the initial response time (e.g., "Respond within 4 hours"). It focuses on the first action (e.g., acknowledging a customer issue) and is often paired with a service profile for a complete SLA framework. For instance, a "High Priority" response profile might mandate a 2-hour response.

Why Not the Others?

* Service contract (C): While a service contract may reference SLAs, it's not "used" in the determination procedure—it's a source document, not a configuration element like a profile. The SLA profiles are derived from or linked to it.

* Service organizational unit (D): This defines who performs the service, not the SLA deadlines. It influences assignment, not time-based SLA calculation.

How It Works in Practice:

- * A service order is created (e.g., for a pump repair).
- * The system checks the SLA determination procedure (customized in SPRO # Service # SLA Determination).
- * Based on the item category or contract, it applies a service profile (e.g., 48-hour resolution) and response profile (e.g., 4-hour response).
- * Deadlines are set and monitored (e.g., via the Service Order Issues app).

Additional Insight:

SLA profiles can incorporate calendar settings (e.g., excluding weekends) and priority levels, making them flexible for different scenarios. They're maintained in customizing under "Define Service Profiles" and "Define Response Profiles."

"The SLA determination procedure utilizes service profiles and response profiles to calculate and enforce deadlines for service transactions."

NEW QUESTION # 76

What are examples of customizing activities required for an in-house repair process? Note: There are 3 correct answers to this question.

- A. Define Derivation of Attendance Type, Activity Type, and Cost Element
- B. Define Basic Settings for Transactions
- C. Define Number Ranges
- D. Define Partner Determination Procedure
- E. Enable Item-Based Accounting for Service Management

Answer: B,C,E

Explanation:

The in-house repair process (scope item 3XK) in SAP S/4HANA Cloud Private Edition requires specific customizing activities to set up the system:

- * Enable Item-Based Accounting for Service Management: This is critical for in-house repair to activate item-level cost and revenue tracking, ensuring accurate financial postings for repair orders.
- * Define Basic Settings for Transactions: This includes configuring transaction types (e.g., REPA for repair orders) and item categories, which are foundational for processing in-house repairs.
- * Define Number Ranges: Number ranges must be defined for repair orders and related documents to ensure unique identification and proper document flow.
- * Define Derivation of Attendance Type, Activity Type, and Cost Element: This is more relevant to time recording or project accounting, not a core requirement for in-house repair.
- * Define Partner Determination Procedure: While useful, it's not mandatory for the basic in-house repair process setup. These activities are outlined in the SAP Best Practices for in-house repair configuration. "Customizing for in-house repair includes enabling item-based accounting, defining transaction settings, and setting up number ranges." (SAP Signavio Process Navigator, In-House Repair).

NEW QUESTION # 77

Which of the following can you assign to a service item category? Note: There are 2 correct answers to this question.

- A. Text determination procedure
- B. Date profile
- C. Status object profile
- D. Rejection profile

Answer: A,B

Explanation:

Service item categories in SAP S/4HANA Service (e.g., SRVI for service items) control the behavior of items in service documents. Assignable objects include:

- * Text determination procedure: Defines how texts (e.g., descriptions, notes) are automatically populated or managed for the item, configured in Customizing.
- * Date profile: Specifies date rules and milestones (e.g., start/end dates) for the service item, critical for scheduling and execution.
- * Rejection profile: Not a standard assignment; rejection is managed via status or reasoncodes, not profiles at the item category level.
- * Status object profile: Status profiles are typically assigned to transaction types or item categories for lifecycle management, but not as "status object profiles" in this context. These settings are part of service transaction Customizing. "Assign text determination procedures and date profiles to service item categories to control item behavior." (SAP Help Portal, Service Item Category Configuration).
