

Interactive MB-820 Practice Exam & New MB-820 Test Registration

P.S. Free 2026 Microsoft MB-820 dumps are available on Google Drive shared by Real4exams: https://drive.google.com/open?id=1GI6SLFr__cZkEy3rTilnHfrR7x90dm3G

The latest MB-820 dumps collection covers everything you need to overcome the difficulty of real questions and certification exam. Accurate MB-820 test answers are tested and verified by our professional experts with the high technical knowledge and rich experience. You may get answers from other vendors, but our MB-820 briandumps pdf are the most reliable training materials for your exam preparation.

Are you still overwhelmed by the low-production and low-efficiency in your daily life? If your answer is yes, please pay attention to our MB-820 guide torrent, because we will provide well-rounded and first-tier services for you, thus supporting you obtain your dreamed MB-820 certificate and have a desired occupation. There are some main features of our products and we believe you will be satisfied with our MB-820 test questions. And once you have a try on our MB-820 exam questions, you will love it.

Free PDF 2026 Accurate Microsoft MB-820: Interactive Microsoft Dynamics 365 Business Central Developer Practice Exam

Are you feeling anxious about taking the Microsoft Dynamics 365 Business Central Developer (MB-820) exam? Our customizable practice test questions will help you overcome your anxiety and prepare for the actual exam. With each attempt, you will receive a score report that will help you identify and correct your mistakes before your final attempt. Our web-based practice exam creates a similar situation to the MB-820 Real Exam Questions, making it easier for you to pass. Purchase our Microsoft Dynamics 365 Business Central Developer (MB-820) practice test material today and say goodbye to exam anxiety!

Microsoft Dynamics 365 Business Central Developer Sample Questions (Q33-Q38):

NEW QUESTION # 33

A company uses Azure Application Insights for Business Central online in its production environment.

A user observes that some job queues go into the failed state and require manual intervention.

You need to analyze job queue lifecycle telemetry.

How should you complete the code segment? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 34

A company uses Business Central.

The company has sales orders that have a different location in the header than in the customer's card. You plan to add a check on sales order posting.

The check must meet the following requirements.

- * Sales Order must have the same Location Code as the Location Code set up on the customer's card.
- * Must not be run in preview mode.
- * Must be run even if the user is only shipping items and not invoicing.

You create an event subscription for codeunit 80 "Sales-Post" You need to identify which event to subscribe to Which event should you identify?

- A.
- B.
- C.
- D.

Answer: D

Explanation:

- * This event occurs before posting a sales document.
- * PreviewMode is available in the parameters, which allows checking whether the process is being run in preview mode.
- * This event is typically used for sales order posting and can be used for both shipping and invoicing.

This event matches the requirements because:

- * You can check if PreviewMode is false.
- * It can run for both shipping and invoicing.

NEW QUESTION # 35

You develop a table named Contoso Setup and a page.

You plan to use No. Series to automatically assign a unique number to data entries. You set up No. Series on the Vendor Nos. field of the Contoso Setup table.

You need to apply the No. Series Design Pattern to the trigger OnInsert().

Which four code segments should you use to develop the solution? To answer, move the appropriate code segments from the list of code segments to the answer area and arrange them in the correct order.

Answer:

Explanation:

□ Explanation:

To properly apply the No. Series Design Pattern in the OnInsert() trigger, the correct sequence of actions should be as follows:

- * ContosoSetup.Get();
- * First, retrieve the Contoso Setup record using the Get method. This ensures that the necessary setup information is available, including the No. Series.
- * if "No." = " then begin
- * Next, check if the No. field is empty. If it is, a new number from the No. Series should be assigned.
- * NoSeriesManagement.InitSeries(ContosoSetup."Vendor Nos.", "No. Series", 0D, "No.", "No. Series");
- * Call the InitSeries function to assign a new number from the No. Series. This initializes the No. Series for the Vendor Nos. field.
- * ContosoSetup.TestField("Vendor Nos.");
- * Lastly, ensure that the Vendor Nos. field is populated and valid by calling TestField.

Correct Order for Code Segments:

- * ContosoSetup.Get();
- * if "No." = " then begin
- * NoSeriesManagement.InitSeries(ContosoSetup."Vendor Nos.", "No. Series", 0D, "No.", "No. Series");
- * ContosoSetup.TestField("Vendor Nos.");

NEW QUESTION # 36

You need to define the data types for the fields of the Non-conformity table.

Which two data types should you use? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- **A. Char for the Non-Conformity Number field**
- B. Integer for the Non-conformity Number field
- C. Date for the Non-Conformity Date field
- D. Date Time for the Non-Conformity Date field
- **E. Code for the Non-Conformity Number field**

Answer: A,E

Explanation:

In Business Central, fields in tables are assigned specific data types that determine the kind of data they can store. For the Non-conformity table mentioned in the case study, the following data types should be used:

Date for the Non-Conformity Date field: This is because the Non-conformity Date field is required to store only the date when the non-conformity was recorded. The Date data type is appropriate for storing dates without times.

Code for the Non-Conformity Number field: The Non-conformity Number field is described to use alphanumeric values with a format that includes "NC" and the year, like "NC24-001". In Business Central, the Code data type is used for fields that store alphanumeric keys. It is a text field with a limited length, which makes it suitable for number series that contain letters and numbers. Other options are not suitable:

A . Integer for the Non-conformity Number field: This would not be appropriate because the Non-conformity Number includes alphanumeric characters and not just integers.

B . DateTime for the Non-Conformity Date field: This is not correct because there is no requirement to store the time alongside the date.

C . Char for the Non-Conformity Number field: Char data type is not typically used in Business Central for number series or identifiers. The Code data type is preferred for this purpose.

NEW QUESTION # 37

You need to access the RoomsAPI API from the canvas app.

What should you do?

- A. Include in the extension a codeunit of type Install that publishes RoomsAPI.
- B. Enable the APIs for the Business Central online environment.
- C. Use the default API configuration in Business Central
- **D. Open the Web Services page and publish the RoomsAPI page as a web service.**

Answer: D

Explanation:

* API Publishing for Extensions:

* In Business Central, when creating custom APIs like RoomsAPI, it is important to ensure that they are automatically published during the installation or upgrade of the extension.

* To achieve this, you can include a codeunit of type Install in the extension that explicitly publishes the custom API (RoomsAPI) as a web service. This ensures that it is available for use immediately after the extension is deployed without requiring manual intervention.

* Codeunit Type:

* A codeunit of type Install runs when the extension is installed or upgraded. This type of codeunit can be used to perform setup tasks such as publishing web services or APIs like RoomsAPI.

* Why Not Other Options?

* Option A (default API configuration): This would not automatically publish the RoomsAPI.

Default APIs do not cover custom APIs.

* Option B (enable APIs for the environment): Enabling APIs in Business Central allows the standard APIs to be used, but custom APIs still need to be manually published.

* Option C (publish via Web Services page): This would work but requires manual intervention to publish RoomsAPI, which does not fulfill the requirement of automatic publishing during installation.

Reference Documentation:

* Publishing APIs in Extensions

* Codeunit Types in Business Central
