Xhs1991自分自身を向上させ、進歩させたい場合、SAP現在の仕事に満足できない場合、SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite試験に昼夜を問わず滞在する場合は、学習資料を使用してください。高合格率が98%から100%であるため、試験トレントの高品質と高効率性は市場で他に類を見ないものであると確信しています。最新の正確なSAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite試験クイズをお客様に提供します。試験トレントを選択して、最短時間で期待どおりのC-ACDET-2506結果を得ることができれば、感謝しています。また、SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite練習資料を使用して、実際の試験を事前に体験することができます。

SAP C-ACDET-2506 認定試験の出題範囲:

トピック	出題範囲
トピック 1	<ul style="list-style-type: none">• Project Overview, Roles and Responsibilities: This section of the exam measures the skills of an SAP Cloud Consultant and covers the fundamental understanding of SAP Activate methodology within the context of a cloud implementation project. Candidates are expected to be familiar with the project lifecycle, including phases such as Prepare, Explore, Realize, Deploy, and Run. This part also focuses on identifying key roles and responsibilities within a cloud project team, ensuring clarity in collaboration between consultants, clients, and SAP. It checks whether the consultant understands governance, stakeholder management, and the high-level structure of cloud deployment using SAP best practices.

トピック 2	<ul style="list-style-type: none"> • Deploy and Migration: This part of the exam assesses the expertise of an SAP Deployment Specialist and focuses on the final deployment of the configured solution and the data migration process. Candidates should demonstrate a solid grasp of how to move configurations from a testing environment into production while minimizing disruption. It also includes knowledge of tools and strategies used for data extraction.
トピック 3	<ul style="list-style-type: none"> • Field Configuration: This domain evaluates the knowledge of an SAP Deployment Specialist and focuses on customizing and configuring business fields in the SAP system according to client-specific needs. This includes adjusting system settings for master data, transaction data, and other essential field-level controls to support business processes effectively. The section tests the candidate's ability to use configuration tools, apply SAP standard templates, and ensure that the field configurations align with the desired operational workflows of the business. It also touches upon validation, testing, and documenting the configuration changes made during the implementation.

SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite 認定 C-ACDET-2506 試験問題 (Q21-Q26):

質問 # 21

Which key technical activities occur during the Deploy phase? (Select 3 correct answers)

- A. Go-live
- B. Apply the bundle in production
- C. Migration to production
- D. Execute change management plans
- E. Rebuild all custom header fields in production

正解: A、B、C

解説:

During the Deploy phase, key technical activities include:

- * A. Apply the bundle in production: Using Intelligent Configuration Manager (ICM) to migrate configuration bundles to the production environment.
- * B. Go-live: Transitioning from project mode to operational live usage of the SAP Ariba solution.
- * D. Migration to production: Performing final configuration migration, data loads, and cutover activities per the deployment plan. Rebuilding custom header fields manually (C) is not required because configuration is migrated rather than rebuilt. Executing change management plans (E) is important but considered a business/change activity, not a technical migration activity. These technical tasks ensure the system is correctly configured and operationally ready for end users.

質問 # 22

Which of the following languages is used to define defaults on fields within Ariba?

- A. Ariba expression language
- B. Python programming language
- C. ABAP
- D. Javascript

正解: A

質問 # 23

While working on a customer project, the customer asks if specific details can be captured and made available in reporting for a sourcing project or contract that doesn't fit the standard fields. What is the recommended way to handle this scenario?

- A. Create a dynamic form (dform) where common data can be synced with the project header through customization.
- B. Configure as many custom fields as possible for data capture purposes.
- C. Suggest the customer put a Word document on the template and capture all information in that document.
- D. Create a Microsoft Form from the Actions menu for managing all the requirements.

正解: B

解説:

The recommended approach is to configure custom fields for capturing non-standard data in sourcing projects or contracts. Custom fields allow structured data capture directly within SAP Ariba, which can then be fully included in reporting and analytics. Documents like Word files (A) are unstructured and not reportable. Dynamic forms synced with project headers (B) are not supported as standard functionality. External tools like Microsoft Forms (C) do not integrate with SAP Ariba's reporting capabilities. Custom fields can include picklists, validation rules, translations, and help tips, enabling flexible, maintainable data collection aligned with reporting and compliance needs.

質問 # 24

If you add a custom field to the ContractWorkspace class, which other class(es) will that field be added to?

- A. ContractRequest
- **B. InternalContractWorkspace and SalesContractWorkspace**
- C. SalesContractRequest and InternalContractRequest
- D. AbstractContractWorkspace

正解: B

質問 # 25

Which of the following can be used to define relation types and establish a custom relationship? (Select 2 correct answers)

- A. A custom Form Template such as vrealm_1936.formDoc_18697.LessonsLearned
- **B. A custom Flex Master Data Template such as vrealm_1936.fmd_58984.Hospital**
- C. A custom Enumeration such as Contracts_Contract_Type
- **D. A standard class such as ariba.basic.core.CommodityCode**

正解: B、D

解説:

In SAP Ariba, relation types can be defined using custom Flex Master Data (FMD) templates and standard classes such as ariba.basic.core.CommodityCode. These define valid relationships between fields, allowing dependent picklists or filtering logic in forms. Custom enumerations are static lists and are not used to establish dynamic relations, and custom form templates are for form layouts and do not define data relationships.
