# CGOA日本語参考 & CGOA復習解答例

2025年GoShikenの最新CGOA PDFダンプ およびCGOA試験エンジンの無料共有：https://drive.google.com/open?id=1t_VxWWUIWI-Hg50C1GBnY_UsBhV-hJJ6

現在IT技術会社に通勤しているあなたは、Linux FoundationのCGOA試験認定を取得しましたか？ CGOA試験認定は給料の増加とジョブのプロモーションに役立ちます。短時間でCGOA試験に一発合格したいなら、我々社のLinux FoundationのCGOA資料を参考しましょう。また、CGOA問題集に疑問があると、メールで問い合わせてください。

Linux Foundation CGOA 認定試験の出題範囲：

トピック	出題範囲
トピック 1	• GitOps Patterns: This section of the exam measures skills of Site Reliability Engineers and covers deployment and release patterns, progressive delivery, pull versus event-driven approaches, and various architectural patterns for in-cluster and external reconcilers.
トピック 2	• GitOps Principles: This section of the exam measures skills of Site Reliability Engineers and covers the main principles of GitOps, such as being declarative, versioned and immutable, automatically pulled, and continuously reconciled.
トピック 3	• GitOps Terminology: This section of the exam measures the skills of DevOps Engineers and covers the foundational terms of GitOps, including declarative descriptions, desired state, state drift, reconciliation, managed systems, state stores, feedback loops, and rollback concepts.
トピック 4	• Related Practices: This section of the exam measures the skills of DevOps Engineers and covers how GitOps relates to broader practices like configuration as code, infrastructure as code, DevOps, and DevSecOps, along with continuous integration and delivery.
トピック 5	• Tooling: This section of the exam measures skills of DevOps Engineers and covers the tools supporting GitOps, including manifest formats, packaging methods, state store systems such as Git and alternatives, reconciliation engines like ArgoCD and Flux, and interoperability with CI, observability, and notification tools.

Linux Foundation Certified GitOps Associate 認定 CGOA 試験問題 (Q60-Q65):

質問＃60
Which of the following statements accurately describes the role of GitOps in progressive delivery?

- A. GitOps does not allow end users to perform progressive delivery automatically, only manually.
- B. GitOps allows end users to perform progressive delivery automatically without manually shifting traffic.
- C. GitOps requires end users to manually shift traffic for progressive delivery.
- D. GitOps only works with manual progressive delivery without any automation.

正解：B

解説：
Progressive deliveryis a GitOps pattern that incrementally rolls out application updates, using methods like canary releases, feature flags, and blue-green deployments. GitOps enhances this by ensuring the rollout isautomated and declaratively managed through Git, removing the need for manual traffic switching.
"GitOps enables progressive delivery by declaratively managing rollout strategies such as canary or blue- green deployments. These strategies are applied automatically by controllers, without requiring manual traffic switching." Thus, the correct answer isB.
References:GitOps Patterns (CNCF GitOps Working Group), Progressive Delivery practices.

質問＃61
Which method(s) of accessing the Desired State store does GitOps support?

- A. Pull is required and push can optionally be used in addition to pull
- B. Push method only
- C. Replication only
- D. Neither push nor pull

正解：A

解説：
GitOps requires apull-based approachas the default model, where agents in the cluster automatically pull desired state from Git. However,push-based triggers(e.g., webhooks) can optionally be used to complement pull-based reconciliation.
"Pull-based reconciliation is required in GitOps to ensure automation and security. Push-based triggers may optionally complement this, but the pull model is fundamental." Thus, the correct answer isD.
References:GitOps Principles (CNCF GitOps Working Group), Reconciliation Models.

質問＃62
Which of these Git commands will enact a rollback of the configuration to a previous commit?

- A. git revert
- B. git push
- C. git commit
- D. git branch

正解：A

解説：
In GitOps, rollback is performed by reverting the system'sDesired Statestored in Git. This is done with thegit revertcommand, which creates a new commit that undoes the changes introduced by a previous commit.
"Because Git provides an immutable history of changes, rollbacks are straightforward. Reverting to a previous configuration is accomplished by reverting the commit in Git, which then allows the reconciler to apply the earlier desired state." Thus, the correct answer isB: git revert.
References:GitOps Tooling (CNCF GitOps Working Group).

質問 #63

In the context of GitOps, why would you do a rollback?

- A. To improve performance and optimize resource utilization.
- B. To create a backup of the current configuration.
- C. To test a new feature in a controlled environment.
- D. To undo a deployment that introduced a critical bug or caused a system failure.

正解：D

解説：
In GitOps, rollback is the process of reverting to a previous known-good configuration stored in Git. This is typically done when a deployment introduces a bug, error, or failure that impacts system stability.
"Rollback in GitOps is used to revert to a previous commit representing a stable configuration when the current deployment causes errors or failures." Thus, the correct answer is A.
References: GitOps Principles (CNCF GitOps Working Group), Rollback and Recovery.

質問 #64

In the context of GitOps, what source of truth guides the continuous deployment process?

- A. Desired State
- B. Current State
- C. Fleeting State
- D. Dynamic State

正解：A

解説：
The Desired State, stored in Git, is the ultimate source of truth in GitOps. It defines how the system should look and behave.
Continuous deployment processes reconcile the actual cluster state against this Desired State.
"In GitOps, the desired state kept in Git is the single source of truth. The reconciler ensures the actual state matches the desired state, guiding the continuous deployment process." Thus, the correct answer is A.
References: GitOps Terminology (CNCF GitOps Working Group).

質問 #65

……

もし君がLinux FoundationのCGOAに参加すれば、良い学習のツルを選ぶすべきです。Linux FoundationのCGOA認定試験はIT業界の中でとても重要な認証試験で、合格するために良い訓練方法で準備をしなければなりません。。
