## 최신 SAP Certified Associate C-THR92-2505 무료샘플문제 (Q47-Q52):

### 질문 # 47

You have a field in Job Information that stores the assignment of an employee to a Generic Object record for a Company Car. Company Car records include an Assignment Date of the Car. You want to create a query that includes the Employee Information, and also include the Assignment Date of the Car. You add the Job Information Table to Query Designer. What steps do you take to accomplish the query? Note; There are 2 correct answers to this question.

- A. In Job Information table, expand the Company Car Field.
- B. In Job information table, select the Assignment Date field.
- C. In the Company Car table, select the Assignment Date Field.
- D. In Related tables, add the Company Car table to the Query.

정답: A,C

#### 설명:

To include the Assignment Date of a Company Car in your query:

- \* In Job Information Table, Expand the Company Car Field (A):
- \* Open the Job Information table in Query Designer.
- \* Locate the Company Car field and expand it to access related fields and data.
- \* In the Company Car Table, Select the Assignment Date Field (D):
- \* Add the Company Car table from the related tables section to the query.
- \* Select the Assignment Date field from the Company Car table to include it in the query output.

### 질문 # 48

Which actions can you permit the report consumer to perform by your configuration of interactive widgets?

Note; There are 3 correct answers to this question.

- A. Add/delete widgets.
- B. Freeze table rows/columns.
- C. Switch between edit and view mode.
- D. Show/hide labels.
- E. Adjust filters within controls.

정답: A,B,D

#### 설명:

\* Interactive Widgets

\* Interactive widgets provide customization options for report consumers, enhancing user experience.

\* Actions Allowed

\* C (Show/hide labels): Enables users to toggle labels for clarity or preference.

\* D (Add/delete widgets): Allows users to modify the visual layout by adding or removing widgets.

\* E (Freeze table rows/columns): Helps users lock rows/columns for easier data navigation.

\* Why Other Options are Incorrect

\* A (Adjust filters within controls): Filters are generally predefined by the report designer.

\* B (Switch between edit and view mode): Consumers typically do not have edit permissions.

### 질문 # 49

You are creating a Story report on Job Classifications. You have configured the chart, table, and input control on the canvas, as displayed in the screenshot. How do you set the input control?

- A. Convert it to a Story Filter.
- B. Configure it for Linked Analysis.
- C. Enable Cascading Effects.
- D. Create the corresponding filter on each chart.

정답: B

#### 설명:

\* Linked Analysis

\* Configuring input controls for Linked Analysis allows interactions between components (charts, tables) on the same canvas, enabling filters to apply only to selected visuals.

\* Why This is Correct

\* In the scenario, the input control must affect only the charts and not the table. Linked Analysis ensures this targeted filtering behavior.

\* Why Other Options are Incorrect

\* B (Create Filters): Manually adding filters is redundant when Linked Analysis can automate the behavior.

\* C (Enable Cascading Effects): Cascading effects affect hierarchical filters but are unrelated to input control behavior here.

\* D (Convert to Story Filter): A Story Filter would apply globally, affecting all elements, which is not desired.

### 질문 #50

You have created a custom MDF object to track company car information. You need to be able to create story reports on the data of the custom MDF object. What must you do to enable a custom MDF object to be listed in the Available Data section of Query Designer?

- A. Update the Report Object Configuration Entity record for the object and set it as a root report object.
- **B. Update the Report Object Configuration Entity record for the object and associate the object with a schema.**
- C. Create a custom schema join using the Report Schema Join Manager tool.
- D. Create a Report Schema Configuration Entity Record.

정답: B

설명:

\* Scenario Analysis

\* Custom MDF (Metadata Framework) objects, such as company car information, must be configured properly to appear in the Available Data section of the Query Designer.

\* Solution

\* Updating the Report Object Configuration Entity (ROCE) record to associate the custom MDF object with a schema ensures it is recognized in the reporting layer.

\* Why Other Options are Incorrect

\* A: Creating a custom schema join is not necessary to make the object available.

\* C: Report Schema Configuration Entity is not applicable in this context.

\* D: Setting it as a root report object is not required for inclusion in Query Designer.

### 질문 #51

You need to create a chart of type Indicator: Numeric Point that displays the following output:

count of employees with the gender male divided by the count of employee with the gender female.

The chart can then be filtered for different departments. What calculation is required to create the metric?

- A. In Query Builder, use a calculated column.
- B. In Chart Builder, use a calculation of type: Restricted Measure.
- C. In Chart Builder, use a calculation of type: Aggregation.
- **D. In Chart Builder, use a calculation of type: Calculated Measure.**

정답: D

설명:

\* Understanding the Chart Type

\* Indicator: Numeric Point charts display a single numeric value based on a calculated metric.

\* The desired output requires dividing the count of male employees by the count of female employees.

\* Solution

\* A Calculated Measure in Chart Builder is the appropriate method to perform this calculation within the context of the chart.

\* Why Other Options are Incorrect

\* A (Aggregation): Aggregation alone cannot handle the required calculation.

\* B (Calculated Column): Calculated columns are created at the query level and are not specific to the chart.

\* D (Restricted Measure): Restricted measures limit data based on conditions but do not perform calculations across dimensions.
