Google Cloud Certified - Professional Google Workspace Administrator certification is recognized worldwide and can open up new career opportunities for certified professionals. If you are interested in becoming a certified Google Workspace administrator, Google-Workspace-Administrator Exam is an essential step towards achieving your goal.

Google Cloud Certified - Professional Google Workspace Administrator Sample Questions (Q17-Q22):

NEW QUESTION # 17

You work for an organization that is headquartered in Washington DC You want to reliably send email announcements to all employees in the area and update membership automatically What should you do?

- A. Create a Google Group and add all employees in the Washington DC work location
- B. Create a Google Group and set permissions to invite employees to join the group
- C. Create a Security Group and apply the Location label to allow employees to join based on the specified location
- **D. Create a Dynamic Group by using the location condition to keep the distribution list automatically updated based on the employees work locations**

Answer: D

Explanation:

Access Admin Console: Log in to the Google Admin console using your administrator account.

Navigate to Groups: Go to Directory > Groups.

Create Dynamic Group: Click on Create group and select Dynamic group.

Set Location Condition: Define the membership condition based on the work location attribute. Set the condition to include employees located in Washington DC.

Configure Group Settings: Set up the necessary group settings such as permissions and access controls.

Automatic Updates: The group membership will be automatically updated based on the employees' work locations, ensuring that the distribution list always reflects the current employee locations.

NEW QUESTION # 18

Your company wants to provide secure access for its employees. The Chief Information Security Officer disabled peripheral access to devices, but wants to enable 2-Step verification. You need to provide secure access to the applications using Google Workspace. What should you do?

- **A. Enable authentication via the Google Authenticator.**
- B. Enable additional security verification via email.
- C. Configure USB Yubikeys for all users.
- D. Deploy browser or device certificates via Google Workspace.

Answer: A

Explanation:

* 2-Step Verification (2SV):

* 2-Step Verification adds an extra layer of security by requiring users to verify their identity using a second factor in addition to their password. This helps protect against unauthorized access, even if the password is compromised.

* Google Authenticator:

* Google Authenticator is a mobile app that generates time-based one-time passcodes (TOTP) for 2SV. It works even when the device is offline, providing a secure and reliable second factor for authentication.

* Implementation Steps:

* Enable 2-Step Verification:

- * Go to the Google Admin console (admin.google.com).
 - * Navigate to Security > Authentication > 2-Step Verification.
 - * Turn on 2-Step Verification for the organization.
 - * Deploy Google Authenticator:
 - * Instruct users to download the Google Authenticator app from their respective app stores (iOS or Android).
 - * Provide guidance on setting up Google Authenticator with their Google Workspace accounts.
 - * Users will scan a QR code provided during the setup process to link their account with the Authenticator app.
 - * Advantages of Google Authenticator:
 - * Security: It provides a highly secure method of 2-step verification as the codes are generated on the user's device and change every 30 seconds.
 - * Ease of Use: It's easy to set up and use, with a straightforward user interface.
 - * Offline Functionality: Codes can be generated even without internet access, ensuring consistent access to 2SV codes.
- Why Other Options Are Less Suitable:
- * A. Enable additional security verification via email:
 - * Email-based verification is less secure than app-based 2SV because email accounts can be more easily compromised.
 - * C. Deploy browser or device certificates via Google Workspace:
 - * While device certificates add security, they are typically used for device management and access control rather than for 2-step verification purposes.
 - * D. Configure USB Yubikeys for all users:
 - * USB Yubikeys are highly secure and suitable for 2SV, but they require physical distribution and management of hardware tokens, which can be logistically complex and costly. Given the context of disabled peripheral access, this option might contradict the policy of the Chief Information Security Officer.

NEW QUESTION # 19

An administrator accidentally deleted several Workspace user accounts from the Google Admin Console two weeks ago. How can you recover the deleted user accounts?

- A. Sign in to the Admin console as Super Admin, open user management, filter for "recently deleted." and recover.
- B. Sign in to the Admin console as Help Desk Admin, open user management, filter for "recently deleted." and recover.
- C. Create a matter, go to legal hold, and create a legal hold for the user accounts.
- D. Open a Google support ticket, and request a recovery of all recently deleted users.

Answer: A

Explanation:

To recover user accounts deleted two weeks ago:

- * Sign in to the Admin console as a Super Admin.
- * Navigate to user management.
- * Use the filter to select "recently deleted" users.
- * Recover the deleted user accounts from the list.

Google Workspace allows recovery of deleted users within a 20-day window.

NEW QUESTION # 20

The nature of your organization's business makes your users susceptible to malicious email attachments. How should you implement a scan of all incoming email attachments?

- A. Configure a safety rule to protect against encrypted attachments from untrusted senders
- B. In the security sandbox section, enable virtual execution of attachments for the entire organization.
- C. In the security sandbox section, enable virtual execution of attachments for the targeted OU
- D. Configure a safety rule to protect against attachments with scripts from untrusted senders.

Answer: B

Explanation:

To implement a scan of all incoming email attachments effectively, you should enable virtual execution of attachments in the security sandbox for the entire organization. This feature allows Google Workspace to execute attachments in a sandbox environment to detect malicious behavior before the email reaches the user's inbox. By applying this to the entire organization, you ensure that all users are protected regardless of their organizational unit.

NEW QUESTION # 21

Several customers have reported receiving fake collection notices from your company. The emails were received from accounts.receivable@yourcompany.com, which is the valid address used by your accounting department for such matters, but the email audit log does not show the emails in question. You need to stop these emails from being sent.

What two actions should you take? (Choose two.)

- **A. Configure Domain Keys Identified Mail (DKIM) to authenticate email.**
- B. Disable mail delegation for the accounts.receivable@yourcompany.com account.
- C. Change the password for suspected compromised account accounts.receivable@yourcompany.com.
- D. Disable "Allow users to automatically forward incoming email to another address."
- **E. Configure a Sender Policy Framework (SPF) record for your domain.**

Answer: A,E
