CY0-001 Associate Level Exam, Reliable CY0-001 Test Vce

Our CY0-001 practice test is high quality product revised by hundreds of experts according to the changes in the syllabus and the latest developments in theory and practice, it is focused and well-targeted, so that each student can complete the learning of important content in the shortest time. With CY0-001 training prep, you only need to spend 20 to 30 hours of practice before you take the CY0-001 exam. Meanwhile, using our CY0-001 exam questions, you don't need to worry about missing any exam focus.

CompTIA SecAI+ Certification Exam Sample Questions (Q98-Q103):

NEW QUESTION # 98

An organization recently developed an AI-powered product and discovers that it is vulnerable to attacks in which malicious actors can alter the input, causing the system to recommend inappropriate information. Which of the following techniques is the most effective way to secure the system against manipulation attacks?

- A. Cross-validation
- B. Guardrails
- C. Feature regularization
- D. Feature scaling

Answer: B

Explanation:

Guardrails restrict and control how an AI model processes and responds to inputs, making them the most effective defense against manipulation attacks such as prompt injection or malicious input alteration.

NEW QUESTION # 99

Which of the following is the primary purpose of validating data for an AI system?

- A. To optimize the storage databases
- B. To automate the process
- C. To ensure bias-free outcomes
- D. To reduce consumption of resources

Answer: C

Explanation:

Validating data ensures quality, consistency, and fairness in training sets, helping prevent biased or inaccurate results in AI system outputs.

NEW QUESTION # 100

User experience is declining since the launch of a large language model (LLM) in internal networks. Which of the following should be the highest priority for the prompt engineers?

- A. Customer success management
- B. Business objectives
- C. Quality control
- D. Sales life cycle

Answer: C

Explanation:

When user experience is declining after an LLM launch, the top priority for prompt engineers is quality control. Ensuring prompts produce accurate, relevant, and safe outputs directly improves usability and restores user trust.

NEW QUESTION # 101

A recently deployed AI system becomes persistently unavailable. A restart temporarily fixes the issue, but the issue happens again. Upon examination of application programming interface (API) logs, an analyst finds that external calls continued to use system resources after the action completed.

Which of the following is the best way to improve availability of the system?

- A. Implementing multifactor authentication (MFA)
- B. Enforcing session expiration
- C. Creating token limits
- D. Increasing system memory

Answer: B

Explanation:

The persistent unavailability is caused by external calls consuming resources even after completion, indicating sessions are not being closed. Enforcing session expiration ensures unused sessions are terminated, freeing resources and improving system availability.

NEW QUESTION # 102

Which of the following controls is the best way to mitigate a denial-of-service (DoS) attack?

- A. End-to-end encryption
- B. Model guardrails
- C. Rate limiting
- D. Access controls

Answer: C

Explanation:
