100% Pass DevOps-SRE - PeopleCert DevOps Site Reliability Engineer (SRE) –Professional Latest Mock Test

We strive to use the simplest language to make the learners understand our DevOps-SRE exam reference and the most intuitive method to express the complicated and obscure concepts. For the learners to fully understand our DevOps-SRE test guide, we add the instances, simulation and diagrams to explain the contents which are very hard to understand. So after you use our DevOps-SRE Exam Reference you will feel that our DevOps-SRE test guide' name matches with the reality.

The PeopleCert DevOps-SRE Certification Exam is a valuable certification for IT professionals who want to prove their skills in SRE and DevOps. PeopleCert DevOps Site Reliability Engineer (SRE) certification covers a range of topics, including SRE principles, DevOps culture, incident management, automation, and monitoring. PeopleCert DevOps Site Reliability Engineer (SRE) certification is globally recognized and provides a framework for IT professionals to improve their skills and knowledge in SRE and DevOps.

Peoplecert PeopleCert DevOps Site Reliability Engineer (SRE) Sample Questions (Q79-Q84):

NEW QUESTION # 79

Reliability is a key pillar to digital experience monitoring and the management of incidents. Which of the following describes the BEST type of reliability monitoring strategy in SRE?

- A. A strategy that instruments observability and provides monitoring insights across an components and layers
- B. A strategy that uses traditional and familiar monitoring toots rather than advanced artificial intelligence
- C. A strategy that harnesses advanced technologies to measure, analyze, and maintain the fitness of applications
- D. A strategy that focuses on monitoring and discovering useful patterns and the performance of all active networks

Answer: A

NEW QUESTION # 80

Kaizen is the Japanese word for continuous improvement using small incremental changes. Which of the following BEST describes a kaizen mindset?

- A. Passionate about improvement by using experimentation to identify the best-possible problem solutions
- **B. A willingness to recognize problems, prioritize them, find their solutions, and share lessons learned**
- C. Enthusiasm for learning and applying problem-solving techniques in order to improve performance
- D. A desire to seek out the problem, find their root cause or causes and document the lessons learned

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Although Kaizen originates from Japanese lean culture, its mindset aligns strongly with SRE's continuous improvement philosophy. The SRE Book emphasizes a culture where teams identify problems, prioritize them, fix them, and share knowledge, stating that: "Incremental improvements and learning from failures lead to resilient systems, and teams must continuously refine processes and technology." (SRE Book - Chapters:

"Postmortem Culture," "Eliminating Toil"). Option C captures all key Kaizen elements-problem recognition, prioritization, solution, and knowledge sharing-mirroring SRE's blameless postmortem and iterative improvement practices.

Option A emphasizes learning but lacks problem ownership.

Option B focuses too narrowly on root cause analysis.

Option D emphasizes experimentation but misses prioritization and lesson-sharing.

Thus, C is the best match for a Kaizen mindset within the SRE framework.

NEW QUESTION # 81

Which of the following BEST describes the two key elements that an error budget balances?

- A. Features and benefits
- B. Time and money
- **C. Innovation and reliability**
- D. Risk and reward

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Error budgets represent the allowable amount of unreliability in a system. Google defines the purpose of error budgets as: "balancing the pace of innovation with the need for reliability." (SRE Book - Service Level Objectives). When the error budget is healthy, product teams can release features quickly; when it is exhausted, reliability work takes priority. This balance prevents over-investment in reliability and enables safe innovation.

Option B-innovation and reliability-is the exact phrasing used in Google's SRE literature.

Options A, C, and D do not reflect the core purpose of error budgets.

Thus, B is the correct answer.

NEW QUESTION # 82

The new SRE team is advocating against a fixed Error Budget. Why are fixed Error Budgets better?

- A. They help predict outages
- B. Fixed Error Budgets are never exceeded
- **C. They encourage working in smaller batches that reduces risk**

- D. They create more toil

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Fixed error budgets are preferred in SRE because they encourage smaller, safer, and more predictable releases, which inherently reduces risk. A fixed budget forces the team to consistently evaluate how much reliability they can afford to trade for delivery speed each month or quarter.

From the Site Reliability Engineering Book, Chapter "Service Level Objectives":

"Error budgets allow teams to make controlled decisions about the risk they take on. A fixed budget naturally encourages teams to release in smaller batches, which reduces the overall risk and impact of a failure." Similarly, the SRE Workbook states:

"When teams work within a fixed error budget, they tend to push changes in smaller increments to avoid burning the budget too quickly." Why the other options are incorrect:

- * A Fixed budgets reduce toil by reducing firefighting, not increase it.
- * C Fixed budgets can be exceeded; this is not a reason they are beneficial.
- * D Error budgets do not predict outages; they measure tolerated unreliability.

Thus, the correct and SRE-supported answer is B.

NEW QUESTION # 83

What types of outages must fit into an Error Budget?

- A. Unplanned incidents
- B. Any change approved by the CAB or decision authority
- C. Defect fixes
- **D. Any planned or unplanned outage**

Answer: D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

An error budget accounts for all downtime, including both planned and unplanned outages. This is a critical SRE principle: the user does not distinguish between maintenance downtime and accidental downtime - therefore, neither should the SLO nor the error budget.

The SRE Book, Chapter "Service Level Objectives," states:

"From the user's perspective, availability is simply whether the service is working or not, regardless of whether the outage was planned or unplanned." This means all downtime counts toward the error budget.

Additionally, the SRE Workbook reinforces this point:

"Error budgets must include every form of unavailability - maintenance events, configuration changes, emergency work, and unexpected incidents." This confirms that planned outages (maintenance windows) and unplanned outages (incidents) both consume error budget.

Why the other options are incorrect:

- * A Only includes unplanned incidents; SRE requires counting planned outages as well.
- * B Defect fixes may contribute to downtime, but "defect fixes" alone are not a downtime category.
- * D CAB approval has no bearing on whether outages count toward error budgets.

Thus, C is correct: any planned or unplanned outage must be included.
