

Passing C-CPI-2506 Score - C-CPI-2506 Valid Exam Topics

As far as the price of SAP C-CPI-2506 exam practice test questions is concerned, these exam practice test questions are being offered at a discounted price. Get benefits from SAP C-CPI-2506 exam questions at discounted prices and download them quickly. Best of luck in C-CPI-2506 Exam and career!!! Just choose the best C-CPI-2506 exam questions format and start SAP C-CPI-2506 exam preparation without wasting further time.

SAP C-CPI-2506 Exam Syllabus Topics:

Topic	Details
Topic 1	• SAP Integration Suite Overview: This section of the exam measures the skills of Integration Consultants and covers the foundational concepts of the SAP Integration Suite. It provides an understanding of the suite's capabilities, its role in connecting applications, and its relevance in modern cloud-based integration scenarios.
Topic 2	• SAP Event Mesh: This section of the exam measures the skills of Solution Architects and centers on using SAP Event Mesh to support event-driven integration. It highlights the importance of asynchronous communication, event publishing, and subscription models, allowing organizations to build scalable and decoupled systems.
Topic 3	• Implementing Cloud Integration: This section of the exam measures the skills of Integration Consultants and examines how cloud integration flows are designed and deployed. It emphasizes creating integration scenarios, handling connectivity, and applying best practices to build efficient, secure, and reliable integration processes in SAP's cloud environment.
Topic 4	• Managing APIs: This section of the exam measures the skills of Solution Architects and focuses on managing APIs within the SAP ecosystem. It covers topics such as API provisioning, lifecycle management, security policies, and monitoring, ensuring candidates can handle APIs effectively for enterprise integration needs.

SAP C-CPI-2506 PDF Questions - Accessible On Any Device

From the moment you decide to contact with us for the C-CPI-2506 exam braindumps, you are enjoying our fast and professional service. Some of our customers may worry that we are working on certain time about our C-CPI-2506 study guide. In fact, you don't need to worry at all. You can contact us at any time. The reason why our staff is online 24 hours is to be able to help you solve problems about our C-CPI-2506 simulating exam at any time. We know that your time is very urgent, so we do not want you to be delayed by some unnecessary trouble.

SAP Certified Associate - Integration Developer Sample Questions (Q50-Q55):

NEW QUESTION # 50

Which Sap platform serves as the foundation for SAP' s integration strategy?

- A. SAP S/4HANA serves as the foundation for SAP' s integration strategy.
- **B. SAP Business Technology Platform (SAP BTP).**
- C. SAP Cloud Platform Integration (CPI) serves as the foundation for SAP' s integration strategy.
- D. SAP Netweaver Process Integration (PI) serves as the foundation for SAP' s integration strategy.

Answer: B

Explanation:

SAP's integration strategy is founded on the SAP Business Technology Platform (BTP), which provides: Integration Suite as the strategic iPaaS for process, data, API, and event-driven integration.

Extension Suite for app extensions.

Database & Data Management for unified data access.

Analytics & AI capabilities.

Other options:

SAP CPI # Now part of Integration Suite, not the overall foundation.

SAP S/4HANA # The digital core ERP, but not the integration platform.

SAP NetWeaver PI/PO # Legacy middleware, replaced strategically by Integration Suite on BTP.

Thus, the foundation of SAP's integration strategy is SAP BTP.

NEW QUESTION # 51

Which log level must you use to examine the payload at specific processing steps in an integration flow?

- A. Info
- B. Debug
- C. Error
- **D. Trace**

Answer: D

Explanation:

To examine the payload at specific processing steps in an integration flow, you must use the Trace log level. The Trace log level provides the most detailed information about the message processing, including the payload content and the headers at each step.

You can use the Message Processing Log to view the trace logs for a specific message. Reference: Modernize Integration with SAP Integration Suite | openSAP

NEW QUESTION # 52

Which Clean Core Approach principle promotes the isolation of custom code from standard SAP functionality?

- A. Enforce consistent coding standards.
- B. Promote modular design.
- **C. Maintain separation of concerns.**

- D. Prioritize code reusability.

Answer: C

Explanation:

The Clean Core Approach emphasizes keeping the SAP digital core free from modifications and isolating custom code:

Separation of Concerns # Custom logic/extensions are isolated from SAP standard functionality, ensuring upgrades and innovations are not disrupted.

Other principles (modular design, coding standards, reusability) are good practices but not specifically tied to Clean Core's goal of isolating custom code.

Thus, the correct principle is Maintain separation of concerns.

NEW QUESTION # 53

Which of the following data types can use for an exchange property in a content modifier? Note: There are 2 correct answers to this question.

- A. `java.lang.String`
- B. `java.lang.string`
- C. `java.lang.integer`
- D. `java.lang.Integer`

Answer: A,D

Explanation:

In SAP Cloud Integration, when configuring Exchange Properties in a Content Modifier, supported Java data types include:

`java.lang.String` # The most common type.

`java.lang.Integer` # Numeric properties can be stored.

Other options:

`java.lang.string` and `java.lang.integer` # Invalid, because Java types are case-sensitive.

Thus, correct types are `java.lang.Integer` and `java.lang.String`.

NEW QUESTION # 54

How do you configure a SOAP adapter for asynchronous processing?

- A. Message Exchange Pattern: Request-Reply Process Settings Robust
- B. Message Exchange Pattern: One-Way Process Settings: Robust
- C. Message Exchange Pattern: One-Way Process Settings: WS Standard
- D. Message Exchange Pattern: Request-Reply Process Settings WS Standard

Answer: C

Explanation:

To configure a SOAP adapter for asynchronous processing, you must set the message exchange pattern to one-way and the process settings to WS standard. The message exchange pattern defines how the sender and receiver communicate with each other using SOAP messages. The one-way pattern means that the sender sends a message to the receiver without expecting a response. The process settings define how the SOAP adapter handles errors and acknowledgements during message processing. The WS standard setting means that the SOAP adapter uses WS-ReliableMessaging protocol to ensure reliable delivery of messages and WS-Addressing protocol to identify the endpoints and actions of messages.
